Ahh, the Ebay Guild is born! Only buy off good established sellers. Those new ones are gonna scam ya.

Mybe that's a good idea. The established sellers can band together to keep new people out.

Thank you, John, that gives me another chance to re-state the question
more succinctly. I'm not concerned with inductances here at all,
though.
Does the Ebers-Moll equation hold good at UHF+, provided the value one
inserts for Vbe is adjusted to account for the loss of signal voltage
the B/E junction will suffer as much of it (the applied signal
voltage) is shunted around it via the device's internal capacitances?

There! I think I've nailed it this time!

Several years ago QST magazine published a list of the 20-25 most commonly used
2 meter repeater frequencies in decending order of popularity.
I'd love to have a copy of that list. I do quit a bit of traveling and only

have 10 memory slots in my mobile rig. I have a repeater directory however, I think it would be easier to plug in the most common frequencies and let it go instead of trying to program the radio while driving.

Mike Coslo <mjc5remove@psu.edu> wrote in message news:<40FFB1C8.7040103@psu.edu>...

> Ahh, the Ebay Guild is born! Only buy off good established sellers.
> Those new ones are gonna scam ya.

Mike, that's a pretty bizarre interpretation of what I posted. I was simply sharing my experience gained though something like 5 years of buying and selling on eBay with the newcomers.

If you want to purchase a "pig in a poke" from a seller with zero feedback it's certainly your option to do so and eBay or its established sellers can do nothing to prevent you from doing so. Then too, if a seller has zero feedback most people would consider it prudent to contact the seller by email and determine the facts of the situation.

I personally purchased a HP LJ4+ laser printer from a seller on eBay with zero feedback, but only after an email conversation with him (since this was an over $100 item plus signigicant shipping expense). In fact, I was the very first to provide him with positive feedback.

Realize the facts. On eBay, the majority of fraud stems from sellers with zero feedback offering highly underpriced popular items who insist on payment by a money order (which once cashed is essentially untraceable). Be afraid when you run into this pattern...be very afraid!

Be aware of the importance of feedback on eBay, because like a D&B

report, it paints a picture of the seller's or buyer's past history and performance. Without reading it, you are flying blind!

If you check out my feedback on eBay, you'll learn that since Feb 15, 1999, I've accumulated a total of 313 postive feedbacks (a score of 223 positives since repeat purchase or sales to the same person don't count), plus one neutral from a woman who praised my packing and fast shipping, but claimed that the sealed-in-box antique Cabbage Patch Doll that I sold here "smelled like smoke". Just for the record, the majority of my feedback score stems from items that I have purchased over the years, since I've been only selling since the beginning of the year (roughly 25 items so far this year).

As a seller, I make it a practice to try and ship out an item the day after the auction ends, provided he/she (the buyer) has substantial positive feedback and no negatives even though I have not yet received payment. (I haven't been burned by anyone yet!) Obviously if I received immediate Paypal payment I ship on the next business day, regardless of the buyer's feedback.

Frankly speaking, on eBay the more new sellers the better, because it expands both the quantity and variety of items being offered for sale.

> Mybe that's a good idea. The established sellers can band together to keep new people out.

Are you normally a believer in conspiracy theories? :-) As a new seller, I can't imagine how such a thing could even be done, or any reason that anyone would want to! I sell collectable, antique computer game software, ham radio and research components, radiation detection equipment, technical items, etc. Who would it possibly benefit to keep any of my items from being listed on eBay, and sold on eBay as most of them are?

Think about it.

Harry C.

If you do lots traveling do a bit of research beforehand or
get a radio with more memories. Otherwise your liable to miss something. I run
a V-8000 with all standard pairs programed.
PL search will find the tones if the freq is active. One hint: the repeaters
that have WX (weather net) usually have very good coverage and tend to be
monitored and used more often.
 If niether seems viable just let the radio scan in vfo mode.
 My two cents

May I make the same request for myself?
Circa 1959-197X, my callsign was K2JEZ in Bordentown, NJ.

I'd love to have a copy of the callbook page for my scrapbook, but I
realize that not even old timers would likely still have a callbook
dating back to those years.

If you have one, I'd be happy to pay the copying and mailing costs. My
email address is hhc3141@yahoo.com, not the email address that I post
from which was destroyed and obsoleted by spammers after using it for
too many years on Usenet.

Thanks in advance, and 73's

Harry C.

I have to program some Vertex VX-180s with two sets of pager tones. I tones I was given are:

Pair #1: 2250 1450
Pair #2: 2250 799

I'm told these are Quick Call II tones. I thought at first these numbers were frequencies, but these frequencies don't appear in the programming software's list.

Then I realized they must be QCII "cap codes." So I looked up cap code translations here http://www.batlabs.com/qcii.html, but the numbers still don't make sense.

Can someone help me understand what the heck these values are and how to program them?

Hi, I went through this a few years ago. I remember calling the FCC and they told me it would take a few weeks for someone to research it. They did and mailed me a letter
telling me when I was first licensed.
Good luck in your quest!

Rick, you might want to try the following frequencies if you only have 10:

146.94, 147.00, 146.76, 146.85, 147.30, 146.82, 146.64, 147.21, 146.700, and 147.39.

In my travels around, you can find repeaters one after the other on these frequencies (eg, when one's coverage drops off, another one usually appears, if you're driving). The 147.00 freq can use either a + or - offset, so watch that one. The 146.xx frequencies all are negative shifts, and the 147.xx are positive shifts. As far as the PL's go, it really varies. However, it seems a lot of repeaters in outlying areas might not use PL-only in cities/metro areas. Also, don't discount having 146.52 programmed as well. I think the most common frequencies are 146.94, 146.76, 146.82, and 146.85. 146.94 was the "original" repeater frequency back when repeaters started becoming popular, so it still has a lot of use in many areas because of that-you can usually find something on 94.

73 & good mobiling,
Ken N2ZN

Amateur Radio Newsline™ Report 1406 July 23, 2004

Amateur Radio Newsline report number 1406 with a release date of Friday, July 23, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two important youth awards are made and one Georgia ham shares in both of them. Find out who on Amateur Radio Newsline report number 1406 coming your way right now.

(Billboard Cart Here)

**

ANDREA HARTLAGE, KG4IUM, NAMED ARNEWSLINE(TM) YOUNG HAM OF THE YEAR

Andrea Hartlage, KG4IUM, has been named 2004 Young Ham of the Year by the Amateur Radio Newsline. And since this is a story about the success of the younger members of the hobby we asked our 2002 Young Ham of the Year, Josh Abramowicz, KB3GWY, to bring us the rest. Josh:

--

It was only a few years ago that I got a call at the Hawk Mountain Scout Reservation in Schuylkill County, Pennsylvania, telling me to call someone from Amateur Radio Newsline. It was during that phone call, that started out as an interview, I learned of my nomination and selection as the Young Ham of the Year.

Andrea, it turned out, was with her grandparents on vacation in Florida at the time she got the call on a cell phone from Amateur Radio Newsline's Bill Pasternak, WA6ITF. Here's her first reaction after getting the news:

"I'm very happy and excited."

Andrea, who earned her Extra Class license at the age of 14 - less than a year ago , was first licensed in 2000. She's 15 years old and going into her sophomore year at Grayson High School in Grayson, Georgia, north and east of Atlanta, where she's an honor student.

Andrea has been quite active since getting her ticket just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website. The Youth@HamRadio.Fun column. I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs."

Andrea is proud of her ham radio activity and is promoting the Amateur Radio service among youth.

"I spoke briefly at the Youth Forum in Dayton and I also led a Youth Forum at the hamfest, the local Rockville hamfest, and I also helped put hamfests on with the Alford Memorial Radio Club," she says.

She's also part of the ARRL's Big School Project and serves as a leader and teacher at the Richards Middle School Amateur Radio Club. There, she teaches electronic theory and has come up with a series of fun games to help reinforce the lessons.

So how did Andrea get started in Amateur Radio? She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things."

Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

Andrea has made quite an impression on hundreds and hundreds of people already. You can bet it won't be the last time we'll hear from her, now and in the future.

From the 2002 award winner - Congratulations, Andrea, the 2004 Young Ham of the Year.

For Amateur Radio Newsline, I'm Josh Abramowicz, KB3GWY.

--

Andrea Hartlage, KG4IUM, will get her award at a special ceremony on Saturday, August 21st at the Huntsville Hamfest. In addition to a plaque from Amateur Radio Newsline Andrea will receive a gift of Yaesu brand ham radio gear from Vertex Standard and a week at Spacecamp courtesy of CQ Magazine. Vertex Standard and CQ are both major corporate underwriters of the Young Ham of the Year Award program. (ARNewsline (tm))

**

ANDREA HARTLAGE, KG4IUM AND JAY THOMPSON, W6JAY, NAMED TO RECEIVE HIRAM PERCY MAXIM AWARD

At almost the same time that Andrea Hartlage was getting word that she had been named as Amateur Radio Newsline's Young Ham of the Year
she was also hearing good news from the American Radio Relay League.
So was our 2003 Young Ham of the Year Jay Thompson, W6JAY.
Here's
Amy Abramowicz, KB3IJW, with more:

--

Both Andrea and Jay learned the ARRL's board of directors had selected them to receive the coveted Hiram Percy Maxim Memorial Award.

The ARRL board was so impressed by the nominations for each that they decided to give both of them the award. That means a cash prize of $1,500 each and a special plaque.

Amateur Radio Newsline spoke with ARRL President Jim Haynie, W5JBP. He says there's no doubt Andrea and Jay are the brightest stars among the young hams today.

"Both are just absolutely stellar examples of Amateur Radio and the young crowd that we're trying to encourage at the League," Haynie says. "You couldn't pick anybody any better than these two. And, I'm just amazed at their accomplishments and how they've managed to be so professional in all the things they've done.

"I've read some of their papers and when we chose them as the HPM award winners, what they had accomplished in their brief careers as amateur radio operators. The only thing I would say to young people is use these two people as examples because they are the best. They are the best of the best. And, speaking as president of the League, I congratulate them both and I admire them both because of what they've managed to do."

Mister Haynie also tells us the 1997 Amateur Radio Newsline Young Ham of the Year, Brian Mileshosky, N5ZGT, is in the same class. Brian was the 1999 Hiram Percy Maxim Award winner. He's now 24, married, heading to grad school in the fall, and still very active in Amateur Radio activities in New Mexico.

"All his work in Scouting and DFing and things of this nature that are the epitomy of Amateur Radio again for young people," Haynie says. "When I first met Brian, I was just blown away by his professionalism and how he handled himself as a young amateur. These three young individuals I think set the example and set the standard which we would like to see Amateur Radio go toward."

Mister Haynie says now that the Hiram Percy Maxim selections have been made for 2004, it's soon time to begin identifying candidates for 2005. You can find out more about the award, the qualifications, and the nominating process at www.ARRL.org.

To learn more about Andrea and Jay's accomplishments, you can also check out our website at www.arnewsline.org

For Amateur Radio Newsline, I'm Amy Abramowicz, KB3IJW.

--

We know that all of you join us in congratulating Andrea Hartlage, KG4IUM and Jay Thompson, W6JAY, on being selected top receive these very special awards. (ARRL S.W. Division Newsletter, ARNewsline (tm))

**

Break 1

More in a moment. Right now its time for you to identify your station. Tom Warrenbuerg if you please: "From the United States of
America, this is the Amateur Radio Newsline, heard on bulletin styations around the world, including the KA9EKG repeaster serving Delavan, Wisconsin."

(5 sec pause here)

**

HAM RADIO POLITICS: ARRL BARD MEETING

The naming of Andrea Hartlage, KG4IUM, and Jay Thompson, W6JAY, as winners of the Hirum Percy Maxim Award was only one of many decisions made at the recent meeting of the ARRL Board of Directors. Many of the Boards actions will impact on all of ham radio for years to come. Here's another Abramovich clan -- Mark Abramovich, NT3V, with
that part of the story.

--

In an historic step, the ARRL's board approved the launch of a grassroots lobbying campaign designed to raise awareness among legislators and government agencies about the Amateur Radio service.

ARRL President Jim Haynie, W5JBP, says there was careful deliberation before the board decided to launch the campaign.

"With all the things we have going on right now, such as BPL, our CC&R bill, our Spectrum Protection Act and even the restructuring program that we have it's time to raise our level of visibility," Haynie says.

Haynie says the ARRL board put the directors in charge of appointing volunteers to staff three positions in each division to work as Congressional Action chair, coordinator and assistant.

He says the chair would be someone who has had some experience in lobbying. A coordinator, with the blessing of section managers, would be selected for each state to work with the chair. And, he says, that coordinator would seek assistants to help spread the ARRL's message to congressmen and senators.

"This is a very orchestrated effort and I'm happy to see it happen," Haynie says. "It's something that's been needed to be done for a very, very long time. And it's a good thing, Mark. It really is. It's something we should have done years ago, actually."

Haynie says recent pronouncements by the FCC's chairman clearly pose a threat to the Amateur Radio service.

"I heard Michael Powell say at the NAB (National Association of Broadcasters) conference in Las Vegas this year that everything was on the table," Haynie says.

"All frequencies were on the table for various types of services. "So, Amateur Radio has got to get in there and make sure that it's voice is heard and its importance of the communities that they serve and the people that like to do volunteer work."

Haynie says the league will also ask members to get more active in contacting their representatives in the U.S. House and U.S. Senate to express their views or simply introduce them to the value of the Amateur Radio service in their communities.

"And I'm not asking the league members to do too much, actually, but sit down and write their representatives," Haynie says. "And you don't have to complain about anything. Just tell them about Amateur Radio. Tell them how much it's meant to you and your life and how it may have shaped it or changed it.

"I've said for years some of the finest people I ever met have been through ham radio. But there's many hams out there that have whole careers based on it. And this is too important not to bring the level of visibility to a higher plain."

In other board business, Haynie says there was considerable discussion of Broadband over Power Line internet access and the pending FCC action. Haynie says the board was encouraged that the Alliant Energy BPL trial in Cedar Rapids, Iowa was terminated early because of interference complaints.

He says that move sent a message to other electric utilities exploring BPL.

"It's several dozen utilities now that have looked at BPL and said that it's not something they want to get involved with," Haynie says. "And our message is not economic because they can figure that out for themselves. Our message is the fact that under Part 15, there are certain rules that have to be abided by and we want to make sure that they do that."

Haynie emphasizes the league's position on BPL is clear and consistent and can't be perceived as denying people access to technology.

"We're not against people having broadband access, we're really not," Haynie says. "It's the fact that the interference that this particular technology would bring to the HF bands is going to be a real problem and we've got to hold people's feet to the fire when they say that they're going to mitigate interference. That goes from the White House all the way down."

Finally, Haynie says he is growing cautiously optimistic about the BPL fight and the impact the ARRL's position is having on the industry and some in government agencies.

"I think that our message is beginning to get out, and, like I say, we're not confrontational" Haynie says. "We're just trying to say look at the facts, look at the engineering studies, look at the NTIA studies and draw your own conclusions. If you've got engineers on your staff, they're quite clear."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

A more in-depth report on the actions of the ARRL Board will appear in an upcoming issue of QST Magazine. (ARNewsline (tm))

**

RADIO RULES: VANITY CALL SIGN FEEE GOING UP

The FCC regulatory fee to obtain an Amateur Radio vanity call sign will rise from $16.30 to $20.80 later this year. According to the ARRL Letter, the FCC announced the new fee in a Report and Order in MD Docket 04-73. Thats also known as the "Assessment and Collection of Regulatory Fees for Fiscal Year 2004" and the FCC says it anticipates 7800 applications for that time frame. The FCC expects revenue collected from the vanity call sign regulatory fees in Fiscal Year 2004 to rise by more than $2100. The Report and Order becomes effective 30 days after it's published in The Federal Register. (ARRL)

**

ENFORCEMENT: CBS SAYS IT WILL NOT ACCEPT SUPER BOWL INCIDENT FINE

CBS says that it will fight any fines leveled against its television stations over Janet Jackson's startling Super Bowl performance. This, according to a top executive with parent company Viacom Inc. on July 19th.

An FCC staff recommendation did not call for fining CBS affiliates that aired the Super Bowl halftime show but are not owned by Viacom. But CBS itself could face a fine of $550,000 or of $27,500 for each of its 20 owned and operated stations that asired the so called Janet Jackson wardrobe malfunction.

Now, in a recent talk before the Television Critics Association, Viacom co-president and co-chief operating officer Leslie Moonves criticiszed any fine as being grossly unfair. He said that CBS considers the idea of a fine as patently ridiculous and that the company will take the matter into court if such a penalty is imposed. (Published news reports)

**

ON THE AIR: SAN DIEGO'S 96.9 MHZ PIRATE REACTIVATES

According to a news bulletin from Chris Carmichael, San Diego's 96.9 MHz pirate is back on the air. No news on the location ofthe transmitter site. (CGC)

**

RADIO LAW: HAWAII'S GOVERNOR VETOES AMATEUR RADIO ANTENNA BILLS BUT OVERICDE MIGHT BE ATTEMPTED

The ARRL Letter reports that Hawaii Governor Linda Lingle has vetoed two Amateur Radio antenna bills. Both pieces of legislation would have provided limited opportunities for amateurs living under private deed covenants, conditions and restrictions to erect antennas.

HB 2773 would have opened the door for amateurs living in condominiums to make arrangements with the homeowners' association board to install an antenna without having to change the CC&Rs. HB 2774 would have granted similar rights to the relatively few amateurs who live under CC&Rs in agricultural-zoned property.

Lingle, a Republican, invoked the same reason for refusing to sign both bills into law. She said that the bills were objectionable because they amount to an inappropriate and unacceptable governmental intrusion into the contractual affairs of the property owners.

But it may not be over yet. According to word from former Westlink News Production Coordinator Bill Orenstein, KH6QX, there is a move afoot to overide the Lingle veto in the Hawaii State legislasture. Orenstein, who now lives in Hawaii could not say when the overide action might take place or if it had any chance of success. (ARRL with additional information by KH6QX)

**

HAM RADIO ON THE NET: HAMBLOG.COM

www.hamblog.com is a new weblog host exclusively for amateur radio operators.

What is a blog you ask? Simply, its a spot in cyberspace where people post their thoughts and ideas on just about any subject. Some blogs let you do just that while others like hamblog.com are targeted to a particular subject. In the case of hamblog.com its our hobby of Amateur Radio.

Charles Brabham, N5PVL, who administers hamblog.com says that hams have a lot of information to pass on to each other but traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. He says that Weblogs are highly flexible and highly individualistic and they hope that hamblog.com will provide a wellspring of knowledge about Amateur Radio that would be impossible to access or distribute by traditional methods.

Oh yes. Charles says that the service is free of charge so go check it out. The URL is simply www.hamblog.com (Via e-mail)

**

HAM RADIO CONFERENCES: THE DCC IN IOWA IN SEPTEMBER

On the ham radio social scene, the 2004 joint TAPR and ARRL Digital Communications Conference will be held September 10th to the 12th. This, at the Airport Holiday Inn in Des Moines, Iowa.

As part of the program, confereence planners are now accepting papers for the published proceedings. Submission are due by August 10th and should be sent tyo Maty Weinberg, ARRL, 225 Main Street, Newington, Connecticut, 06111. You can also e-mail them to maty@arrl.org

And very important. You can even take part even if you cannot be there in person. Thats because you do not have to be present at the conference to have your paper included in the proceedings.

Again, thats the 2004 joint TAPR and ARRL Digital Communications Conference fropm September 10th to the 12th at the Airport Holiday Inn in Des Moines, Iowa. More information is on-line at www.tapr.org/dcc (VHF Reflector)

ARNEWSLINE™ SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, once again with some thank-you's, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

We'd like to take a moment to thank everyone who helped us during our June campaign. We heard from Brian Boccardi, N2MPM of North Brunswick, NJ; Lloyd Smith, WA9NLA and the Peace River Radio Association of Port Charlotte, FL; Billy Bryant, Jr., of Harvey, LA; The Reading, PA Radio Club, W3BN; Eric Olena, WB3FPL of Mohnton, PA; monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; our friends at the Dayton Amateur Radio Association; Mark Otspaih, also from Dayton Ernest Clark in Greenwood, IN; and C. Mark Burlingame, KB9TVD of Northlake, IL

The boss said I only have about a minute, so we'll have to do the rest of the list next week. Thank you to everyone. A reminder that Newsline is a 501c 3 California non-profit corporation. Information on how to support us is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now back to the news. (ARNewsline (tm) Support Fund)

**

RADIO SAFETY: CELLPHONE TAKES BULLET AIMED AT SUBSCRIBER

A South African merchant says he owes his life to the Nokia cellphone he was holding to his ear when he was ambushed by someone in a passing car. Andre Steyn felt the bullet penetrate his hand, only to be stopped by the phone before it could penetrate his head. The entire story is on-line at www.mobilemonday.net/mm/story.php?story_id=3653 (CGC)

**

RADIO ON THE ROAD: THE SHRINKING SYNDROME

If you are finding the size of your car and your mobile rig shrinking, you are not alone. According to Lee Cobb, W6TEE, writing in Worldradio Magazine, the actual size of automobiles has not changed much ion recent years, but the competition for space in front has. As a result, under dashboard mounting of gear is almost out of the question due to such amenities as consoles and such.

But fear not. Lee has some interesting notes on how to conquer the new car lack of space syndrome and ways her has found to get around the problem. You can read all about it on Lee's H-F Mobile column on
Page 31 of the August issue of Worldradio on newsstands right now.
(ARNewsline (tm))

**

HAM CONFERENCES: AMSAT-UK SPACE SYMPOSIUM

And AMSAT - UK is holding a Space Symposium at the University of Surrey from Friday the 30th of July to Sunday the 1st of August. On the Saturday there will be special beginners sessions run by Howard Long, G6LVB, aimed at those wishing to get into the fascinating world of amateur satellite communications. The RSGB GB4FUN van will be on site throughout the event. For booking information and full program details take your web browser to www.uk.amsat.org or contact Jim Heck by e-mail to g3wgm@amsat.org (AMSAT-UK)

**

WORLDBEAT: DXPL NOW ON WRMI

Turning to news from around the world, this item for hams and
SWL's
who listens to the D-X Party Line show. Allan Graham, who hosts the DX Party Line has announced that the show will now be carried by WRMI each Sunday at 0300 U-T-C.   That's 11 PM Eastern and 8 PM on the West Coast on Saturday here in the U-S-A. The frequency to listen on is 7.385 MHz.

WRMI is oned by the Florida based Radio Miami International and is heard throughout the Americas -- from Alaska to Tierra del Fuego -- in English, Spanish and other languages. The new schedule for the DX Party Line was slated to begin on July 24th. (ASWLC)

WORLDBEAT: SAQ NAMED WORLD HERIRTAGE STATION

SAQ, the Alexanderson alternator VLF transmitter at Grimeton in Sweden has been declared a World Heritage site by UNESCO. According to the RSGB News, the decision was made by the World Heritage Committee of UNESCO at a meeting near Shanghai in China on the 2nd of July.

S-A-Q continues to make occasional transmissions on 17.2 kHz on CW. The last one was on the 4th of July. (RSGB)

**

ON THE AIR: NEW PROPAGATION BEACONS IN CM88

Some new propagation beacons to report. K7XC reports over the VHF Reflector that as of 05:00 U-T-C on July 19th the KJ6KO 2 meter, 1 and 1/4 meter and 70 centimeter beacons in grid square CM88 are all clearly audible at his home in Fallon Nevada. Thats grid DM09.

The new beacons operate on 144.282 at 40 watts into a pair of loop antennas. The 1 an d 1/4 meter unit is on 222.014 with 25 watts into two stacked loops and the 70 centimeter beacon runs 100 watts into four stacked loops on 432.292 Mhz.   KJ6KO says that he would apreciate any Q-S-N reports. Send them to his Callbook address. (VHF Reflector)

**

DX

In D-X. word that members of the United Kingdoms Wrexham and District Amateur Radio Society will be operating from the Isle of Man froom September 1st through the 8th. The exact operating location will be Scarlett Point which isd a decomisdsioned Coast Guard look out tower, approximately 1.5 miles South of Castletown, Isle of Man. Operation will be on all High Frequency Bands, plus 50Mhz, 70Mhz, and 144Mhz, at full UK Power. The team is expected to operate on at least 2 H-F Bands simultaneously, and will be running CW, SSB, RTTY, PSK and some SSTV. More is on the teams website at www.gb4iom.co.uk (GB2RS)

Also word that Andorra is now on 6 meters. According to ON4IQ, Andorra has released the 6 meter band to all resident amateurs. He reports that C31JI and C31HK are both already active on the band. (GB2RS)

**

THAT FINAL ITEM: SOMALIA GIVES HAM RADIO INCREASED POWER LIMITS

And finally this week, the ARRL Board Meeting was not the only place where things were ham radio changes were happening last week. Another was the nation of Somalia which has acted to grant its ham radio population a power increase to 3 kilowatts. Thats right. We said 3000 Watts and thats 3000 P-E-P for SSB and 3000 watts average for other modes. Somalia is also letting hams use of the 88 to 108 Mhz band for F-M and permitting Amateur Television broadcasts to be conducted on any unoccupied standard VHF or UHF television channel. WIA newscaster Graham Kemp, VK4BB, has more:

--

Yes the Ministry of Information, Telecommunication and Culture in Somalia has made these changes and more as part of action to implement the W-R-C 2003 accords.

And the Ministry has also made additional frequency allocations for amateur radio experimenters in Somalia. Radio Amateurs in that nation can operate on additional bands including Zero to 9 Kilohertz, from 70 to 90 Kilohertz and 130 to 190 Kilohertz. On Medium Wave frequencies include 495 to 526 Kilohertz, while on the High Frequencies the hams of Somalia get 5.060 to 5.450 MHz and 26.100 to 29.700 MHz excluding 27.995 the sliver band from to 27.999.

This Ministry is promoting Somalia as the best holiday and research destination for visiting radio amateurs. This, as a way of attracting skilled people to help the local Somali people become ham radio operators. Abdikariim Ali Sulatn in Puntand State Somalia confirmed again that Aussie Amateur Sam Voron, 6OA, will continue to conduct ham radio license qualifying courses and issue amateur radio licenses free of charge "in the name of this Ministry" until a national Somali Amateur Radio Society is formed.

And, oh yes. If you are planning to go there, a Somali Visitors Amateur Radio License is now issued to any class of overseas amateur radio license holder as a courtesy. It is free of charge and issued for life unless canceled by the Somali Government. Talk about an inducement to visit a far off land.

Reporting for the Amateur Radio Newsline, I'm Graham Kemp, VK4BB,
for
the WIA News, in Brisbane, Australia.

--

According to a Somali spokesman, as of now, no other country provides radio amateurs with more frequencies or a higher transmitter power output. He added that Somalia welcomes visiting radio amateurs from throughout the world. (WIA News)

I had to come up with proof of a 1989 Novice license I held. The original
paper ticket had long since disappeared, so I wrote the FCC telling them the
call sign and address I had at the time. A few weeks later a letter arrived
from them stating that yes I did have a Novice license awarded on whatever
date in 1989. That was good enough for the VE team.

Hi,

FYI here are two propagation software that look rather complete and using a
pretty and user-friendly GUI. Let's try them.

First the simpler, DX Toolbox :
http://www.blackcatsystems.com/software/dxtoolbox.html (zip to explode and
run)
then the more complex one, Win CAP Wizard :
http://www.taborsoft.com/wwizard3/ (come with a setup).

For WINCAP read well the installation notice BEFORE to install.
Both work completely in a different way but each deserve a try.
Of course they request some basics in propagation...

73

Andrea Hartlage (KG4IUM) named 2004 Amateur Radio Newsline™ Young Ham Of The Year

(Los Angeles, CA) She is 15 years old, about to become a sophomore in Grayson High School in Grayson, Georgia where she holds a 96.41 Grade Point Average and has dedicated the last four years of her young life to serving the needs of her community and its youth through Amateur Radio. For that reason and many others, Andrea Hartlage (KG4IUM) has been selected to be the recipient of the 2004 Amateur Radio Newsline™ Young Ham of the Year Award.

Andrea was first licensed in 2000 and currently holds the Amateur Extra class which is the top of the line. She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things." (A "net control" is the person in charge of a group of ham operators performing emergency or public service communications.)

Andrea has been quite active since getting her FCC license just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website...I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs." The ARRL is the American Radio Relay League, the National Association for Amateur Radio, based in Newington, Connecticut.

Among her many achievements, Andrea has served as an instructor at

J.E. Richards Middle School Amateur Radio Club as part of the "ARRL Amateur Radio Education & Technology Program." The program's goal is to improve the quality of instruction by providing an educationally sound curriculum focused on wireless communications. The project emphasizes integration of technology, math, science, geography, writing, speaking and social responsibility within a global society. Andrea's instructional work at the J.E. Richards Middle School Amateur Radio Club was part of the pilot program.

But Andrea's work in the area of recruiting youngsters into the Amateur Radio hobby goes far beyond her local community. She is an internationally known writer with a monthly on-line column titled "Youth@HamRadio.Fun" and also authors a similar bi-monthly column for the Young Ladies' Radio League (YLRL) Newsletter, YL-Harmonics. As a public speaker she has appeared at the Dayton Hamvention Youth Forum in Ohio and continues to promote the hobby to youngsters at local hamfests, club meetings, and other public events.

In the area of public service, Andrea has already completed the ARRL Emergency Communications training course and serves as the network control station for several regularly scheduled on-the-air emergency communications training sessions. These include networks sponsored by the Gwinnett Amateur Radio Society and the Gwinnett County Amateur Radio Emergency Service (ARES). Andrea also was the control station of the GEMA/ ARES Net for activation during the G8 Summit Conference. On the technical side, Andrea has already used the skill she learned through Amateur Radio to build communications gear for the September 2003 World Canoeing and Kayaking event.

Andrea is a member of several prestigious hobby radio organizations including the ARRL and YLRL mentioned above, the FISTS Club (an international organization dedicated to the preservation of the historic Morse Code), the Gwinnett County Amateur Radio Emergency Service, the Gwinnett Amateur Radio Society (GARS), the Alford Memorial Radio Club, the A-1 Operator's Club and scouting Venture Crew 73.

As to her future, Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

At the end of her freshmen high school year, Andrea had all A's, placed 7th in her class of 664,. She takes all "Gifted Level" courses and will be taking "Advanced Placement" next year.

The Amateur Radio Newsline™ Young Ham of the Year Award will be presented to Andrea Hartlage on Saturday, August 16th, 2003 at the Huntsville Hamfest in Huntsville, Alabama. The award ceremony will be co-hosted by Bill Pasternak (WA6ITF) of Amateur Radio Newsline™, and YHOTY Award Committee Chairman Mark Abramowicz (NT3V). Also present at the ceremony will be representatives of corporate underwriters Vertex Standard USA, Inc. and CQ Magazine. The presentation of the award as a regular feature of this prestigious Amateur Radio convention has been made possible through the generosity of the Huntsville Hamfest Planning Committee and its Chairman,
Walter "Scotty" Neustadter, (W4WW).

As "Young Ham of the Year," Andrea Hartlage, will receive -- courtesy of Vertex Standard USA -- an expense-paid trip to the Huntsville Hamfest, along with a gift of Yaesu ham radio equipment. CQ magazine will treat Andrea to an expense-paid week in Spacecamp Huntsville, and will present her with a variety of CQ products. Amateur Radio Newsline™ will provide Andrea with a commemorative plaque at the award ceremony. The cost of year's plaque has been underwritten by Dave Bell (W6AQ) - President of DBA Entertainment Inc., Hollywood California.

The corporate underwriters of the "Amateur Radio Newsline™ Young Ham of the Year Award" are world leaders in their respective areas of Amateur Radio product support. Vertex Standard USA, Inc. is a trailblazer in the design, manufacture and distribution of high quality YAESU Amateur Radio and commercial two-way radio equipment. CQ magazine is considered the trend-setting publication serving today's modern radio amateur.

The Amateur Radio Newsline™ Young Ham of the Year award program, (formerly the Westlink Report Young Ham of the Year) now entering its 20th consecutive year, is presented annually to a licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

Past recipients of the Young Ham of the Year Award, all of whom epitomize the heart of dedication to their nation include:

Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986)
David Rosenman, KA9PMK, of Muncie, Indiana (1987)

Jonathan Binstock, NK3D, of Potomac, Maryland (1988)
Erin McGinnis, KAOWTE, of Topeka, Kansas (1989)
Mary Alestra, KB2IGG, of Staten Island, New York (1990)
Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991)
Angela (Angie) Fischer, KBOHXY, of St. Louis, Missouri (1992)
Kevin Boudreaux, N5XMH, of New Orleans, Louisiana (1993)
Allison Zettwoch, KD4CKP, of Louisville, Kentucky (1994)
Adam Weyhaupt, N9MEZ, of Alton, Illinois (1995)
Toby Metz, KB7UIM, of Boise, Idaho (1996)
Brian Mileshosky, N5ZGT, of Albuquerque, New Mexico (1997)
Richard Paczkowski, Jr., KF4BIA, of Edgewater, Florida (1998)
Michelle Swann, KE4EZI, of Warner-Robins, GA (1999)
Christopher Arthur, KT4XA, of Russellville, AL (2000)
Patrick Clark, KC8BFD, of Charleston, WV (2001)
Josh Abramowicz, KB3GWY, of Reading, PA (2002)
Jay Thompson, W6JAY, of Santa Ana, CA., (2003)

The award sponsors wish to also thank CQ magazine, Worldradio magazine, QST magazine, the ARRL Letter, and the Radio Amateur Information Network for their generosity in assisting in soliciting nominations for the 2004 award.

Why waste all the time, effort and expense to provide proof of a
previous license to get exam credit?  Just take the exams over again.
They're comprised of multiple-choice questions that really aren't that
hard.  If you passed the exam before, you can pass it again.

-Dave, K3WQ

DXLab, a free suite of 8 applications that automaticly interoperate, includes the following capabilities for monitoring and predicting propagation:

1. collects SFI, A, and K indices from up to 6 web-accessible DX clusters, and displays high/low/last values for each over the last 30 days

2. uses the IONCAP engine and the current SFI to predict propagation between your QTH and another location specified by lat/lon, gridsquare, IOTA tag, or by clicking on a location on a world map; the prediction is shown as a QST-style "bands open over a 24-hour period" chart, with the option to display critical frequencies

3. displays the auroral region boundaries on its world map as a function of the K index, along with your signal's great circle path; in combination, you can assess the likely degree of auroral interaction

4. displays the solar terminator and computes sunrise/sunset times for your QTH and any other specified location over any 30-day interval

5. allows you to assemble a schedule of IARU/NCDXF HF propagation beacons; optionally QSY's your transceiver and optionally rotates your antenna to monitor each beacon in your schedule while highlighting the beacon's position on a word map

All DXLab applications are available via www.qsl.net/dxlab and several other mirror sites.

Dave, at least in my case I have absolutely no intention of obtaining
another license. You're assuming too much.

That's great! Still I held my general class ham ticket at 13, and a
1st Class Commercial ticket at 15 without anyone to help me.

So, what is so extraordinary about this achievement, and what in the
world does it have to do with hydrogen?

You sign your message with a ham call that looks up as a general class holder and if you really don't understand what impendence is and hold a general call, well, this is what relaxed licensing has gotten us. I don't mean to make fun of you here but really, someone who holds a general license should know this, this is a novice thing. Either they lowered the requirements a HUGE amount since I got my advanced license or you stole the ticket. I got my ticket when the FCC gave you the test.

I am not going to answer the question because you should know. If you had not put your call in there, I might have answered.

<< when I check Rg-8u coax with a multimeter It reads ohms yet I
know it is rated at 50 ohm why is this >>

Because you're looking at it at DC....not at RF. Think of a transformer....w/DC it may indicate only a few ohms (i.e., almost a "dead short") and nothing out the other side, but when AC is applied, it does its thing and happily passes power to the secondary. The coax is a 50 ohm "pipe" at RF frequencies. If all the loads are balanced for 50 ohms, most everything hums along just fine (this is obviously oversimplified and for illustration's sake only).

Capisce?

Cheers!
A

You measured DC Ohms which is the Resistance of the wire

Impedance is also expressed in Ohms, and is the total opposition (resistance, capacitance and inductance) offered to the flow of an alternating current in this case RF

To help shed some light on a posters question re: your license class I
also looked up your call sign.

If your call is really KC2GMJ the FCC and QRZ.COM have your info
associated with the wrong data, you should contact the FCC and correct
that info. I copied your post below to make sure I got your call sign
correctly.

Subject: newbie question about coax

Wedge KC2GMJ

KC2GMJ per the http://www.QRZ.com database is a general class ham,
efective license on 03 Oct 2000 expires 09 Jun 2010.

The FCC database confirms this info:

http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=1086742

License granted 06/09/2000
Effective 10/03/2000
Expiration 06/09/2010

Could it be your call is really KC2MGJ ;-}
and you typed it wrong in your post?

KC2MGJ shows a Rochester, NY address like your header info and was licensed 12/04/2003, expires 12/04/2013 and has initials WW like yours also.

Find it here:

http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=2565290

Hi!

My IC-706MKIIG suddenly stopped working with a AH-4 tuner, and other tuners
as well (have tried with an LDG Z-100).
The tuners are working well on another radio, so the problem must be located
inside my radio.

What happens is:
When pressing the tuner button the lamp, which indicates that the tuner is
enabled, just turns on for half a second and then goes off again.

Anybody with experience about a solution to this problem?

Vy 73 de OZ1BV, Brian

Speaking of "the shadow" do you know where to get those old shows? I have a
contact whom I think can sell you the whole series cheap-o.

I took my test at the FCC building down on Varic Street in Manhattan many years ago.
I don't remember that one either. Guess it never came up again in 20 years.

I am not going to answer the question because you should know. If you had not put your call in there, I might have answered.

As the 1st person to reply to this post, I still stand by my reply. OK, either his call is wrong at the FCC ort he keyed it in wrong. I don't post my call on usenet because I don't care to give out my home address.

I still say this is so elementary a question that anyone with a ham license should never even need to ask this. It's a question I would expect from a CBer in the old days.   I knew the answer to this back when I was in high school. If this person did not have a ham call, I would have given him a pass but with a ham call, he really should know and if the FCC does not require one to know what 50 ohms mean on a coax cable, well what can I say.

An ohm meter is good for checking continuity on coax and that's it.

Just for the very few that are flaming me for not knowing
swomething (very low blow) Here is a cut and paste from callsign
lookup on the arrl.orgwebsitre:
Watson, Walter J, KC2MGJ (Technician)
75 Shelbourne Rd
Rochester, NY 14620
Licensee ID: L00776854
FRN: 0009969684
Issue Date: Dec 04, 2003
Expire Date: Dec 04, 2013
Date of last Change: Dec 04, 2003 (License Issued)
Pardon me for defending myself but to put someone down ffor
asking a question truly violates thge spirit of amateur radio
My local club judt doesn't do this maybe it is deifferent in
other places To my way of thinking the only stupid question is
the one that goes unasked and I intend to keep asking for
answers no matter how stupid thew question may seem to those
with more experience.
My latest project is to get on the air on 6m I have to wait for
a kenwood power cord as mine has shuffled itself out of the deck

First off, you mis-typed your call in your original post which screwed
me up, you reversed the MG to GM which resolved to a General class.

I am not flaming you but the FCC. In my day, a Tech license holder
would have been tested on impendence and not have needed to ask such a
question.   It is a measure on how little technical info one needs to

know to get a license these days. I was licensed back when you needed 13 WPM code for a general and had to take the test at an FCC field office. It was far far harder to get a license in those days than it is now. When I look at the tests today, well, it seems a joke but that's how it is I guess. Not your problem.

Still, a little searching on Google can tell you loads. Often a search with Google and a little reading and you can answer your own question. You are welcome to ask questions but first, you should look for the answers.

I sometimes do a local AM radio show where people ask computer questions and most of the questions are easily answered by an easy search but most people don't bother. I keep saying, Google is your friend, look first and then ask. Still they ask and don't look. If you looked first fine, if you didn't, why should others do your work and you learn more if you find the answer yourself. I personally never ask questions before doing lots of looking first.

It is never a good idea to put your name out on usenet. Been here for 20+ years, I work in network security for a fortune 50 company, take my word for it, or not, your choice. This is why I don't post my call.

Sorry if you were offended.

Part of the problem is your sig line- In the above paragraph, you say
your callsign is KC2MGJ. In your sign line it is KC2GMJ.

Anyone know of a rotor repair service, other than Yaesu, for the G-800SDX rotor. Have a unit in need of repair and after much searching have come up with nothing. Checked all the old favorites, Norms, Rotor Doctor (CATS), etc., none mention the Yaesu line of rotors.

Any help would be greatly appreciated.

Hi I have a Kenwood TM-741A Tri-Band Mobile Radio

It Has The 144 mhz Module and the 440 mhz Module Installed..The 144 mhz module is not functioning...The 440 mhz works fine and so does the rest of the radio...complete with owner/ operator manual...

Make offer...

Carl

HamBlog http://www.hamblog.com is a weblog host exclusively for amateur radio operators. The hosting service is free of charge.

Many hams have questions about blogging. If you are wondering what the bloggosphere is all about, there is a definition of blogging on our main page, along with a link to a very good blogging FAQ list. (Frequently Asked Questions) The information there will give you a solid footing as you step into the blogging world.

Why a "HamBlog"?

Hams have a lot of information to pass on to each other that traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. Weblogs are highly flexible and highly individualistic. It is our hope that the public weblogs at HamBlog will provide a wellspring of knowledge about Amateur Radio that would be impossible to express, access or distribute by traditional methods. Perhaps in some way HamBlog will expand the capabilities of our present "Elmering" setup, which many feel has suffered and diminished in recent decades.

As is the case outside of the Amateur Radio community, word gets around about outstandingly informative and useful weblogs. There is a global syndication system for weblogs that HamBlog,Com participates in, just as other blog hosts do. What is different about HamBlog is also the thing that makes it special.... It's all Hams!

If you are an Amateur Radio operator who would like to post a weblog of your activity for the benefit of your fellow Hams, where would you go?

HamBlog.Com, of course!

Charles Brabham, N5PVL

Hello,

I've created a discussion group (mailing list) to discuss high fidelity AM tuners and hobbyist transmitters. Appended below is the more detailed group description.

To subscribe to this group, either go to the group home page (at Yahoo) and subscribe there (you will need a YahooID):

   http://groups.yahoo.com/group/hifi-am/

Or, if you don't have a YahooID, send a blank email to:

   hifi-am-subscribe@yahoogroups.com

Looking forward to seeing you there!

Jon Noring

****

Group Description for hifi-am:
==============================

The purpose of hifi-am is to explore the possibilities of high fidelity AM tuners and hobbyist transmitters for medium-wave (or better known as the broadcast band, appr. 520 to 1720 khz.)

Although most commercial AM broadcasts are definitely not high fidelity (due to various factors including, in many countries, audio bandwidth restrictions), there are nevertheless a few commercial stations which broadcast with audio quality approaching high fidelity. For example, in Australia, because the number of stations is fewer and the country quite large, many stations broadcast with quite wide audio bandwidth, approaching 15 khz.

There is steady growth in interest (in the U.S.) for non-licensed hobbyist broadcasting in the BCB (per FCC "Part 15"), which is restricted to 100 milliwatts and a three meter antenna (among a few other minor restrictions). With a high efficiency antenna, it is possible for such neighborhood broadcasting to be heard about 1/2 to 1 mile from the transmitter. There are quite a few progressive and alternative stations broadcasting this way. For a wonderful example, see Radio KMTZ.

More importantly, it appears there is no specific restriction on audio bandwidth for Part 15 transmissions. Thus, if this is true, the broadcasts can approach high fidelity (15 to 20 khz audio bandwidth.)

Although discussion can focus on the general topic, it is hoped this group will catalyze the development of hobbyist kits for high fidelity

AM tuners (digital, solid state, and tube) and for high fidelity
low-power (Part 15) AM transmitters. It should be fun to consider the
many possibilities.

Xref: g2news1.google.com rec.radio.amateur:356

I am looking for battery packs in any condition for the Alinco DJ-120. Model
numbers for the batteries I am seeking are EBP-7NAZ for the 7.2 V, and EBP-8NAZ
for the 12 V. Any condition acceptable as long as the DC/DC converter is there
and there is no corrosion. Contact me at the address above. Price to be paid
according to battery condition.
Thanks for looking,
Bill Sinkhorn

```

I understand the FCC has been bought off by the various lobbying groups, and a new "give away the ham bands" license structure is coming or may have already come. I was considering upgrading to Extra, but I've heard comments ranging from "Advanced is being grand fathered to Extra" to "there are no more advanced class licenses". So my question is;

1) Am I still an Advanced Class license? The ULS database says I am.
2) Is there any point in taking the Extra test other than my own personal satisfaction?

Thanks,

-MR

You need a little common sense (if you have it) before posting anything
here. rec.photo newsgroups are the places to discuss anything related to
photography, but not political games or hatred rumors.

Rumors always abound and most of them never come to pass.

> 1) Am I still an Advanced Class license? The ULS database says I am.

Yes, you are. Any Advanced class licensee will continue to renew as an Advanced class. It is just that there are no NEW Advanced class licenses being issued.

> 2) Is there any point in taking the Extra test other than my own
> personal satisfaction?
>

Some extra voice and CW spectrum on 15, 20, and 80 meters and some extra CW spectrum on 40 meters. A lot of the interesting DX tends to be more common in what are our Extra class segments. For regular QSOs, these portions are often less crowded.

If you are or want to be a VE, you will be eligible to administer license tests for all classes of amateur licenses. An Advanced class VE can only administer General class and down tests. A General class VE can only administer Technician class tests.

But for me, the motivating factors were:
1) Could I do it?
2) Interesting DX in the Extra class segments.

Nothing has been settled, no decision has been made. You are still an
Advanced class operator.

Regarding your second question.... As an Advanced class operator, you
certainly are aware of the frequency privilege differences between
Advanced operators and Extra operators, so only you can answer...

Most commonly, people use a mobile 2m rig, a 12V power supply, and a
house mounted antenna.

This allows more versatility (moving the rig from site to site, or
mounting in the car) and works better with common emergency power

options like 12V batteries.

Happy trails,
Gary (net.yogi.bear)

Many of the big 2M base rigs are all mode -- FM, SSB, CW, and includes dual rx - tx for satellite work.

The mobiles are typically 2M FM only or 2M - 440 FM only.

So that might explain the price and availability

So if you want 2M for FM only -- a mobile rig and 12V power supply will do ya.

FCC PROPOSES $10,000 FINE FOR CALIFORNIA EX-HAM

A new chapter has begun in the West Coast chronicle of Jack Gerritsen. The FCC now wants to fine Gerritsen $10,000 for violating the Communications Act because he doesn't have an Amateur Radio license yet continues to operate, despite an FCC notice that he no longer has authority to transmit and numerous complaints from Los Angeles-area amateurs. The Bell, California, man--who was very briefly KG6IRO in 2001--contends the FCC acted improperly in setting aside his Technician license. He claims he still holds a valid ham ticket until the Commission affords him a hearing to decide its fate. The FCC says otherwise.

"Gerritsen's positing of arguments challenging the set-aside of his Amateur license does not give him any right to operate a radio station without a license issued by the Commission," the FCC said. It issued a Notice of Apparent Liability for Forfeiture (NAL) June 15.

On its own motion, the FCC's Wireless Telecommunications Bureau (WTB) set aside its November 7, 2001, license grant to Gerritsen a week after issuing it. Citing �1.113(a) of its rules, the FCC based its action on complaints about the operation of Gerritsen's station. It also said Gerritsen's 2000 conviction for interfering with police communications raised questions about his qualifications to be a Commission licensee. His Amateur Radio license application remains in pending status.

FCC Special Counsel Riley Hollingsworth, who wrote Gerritsen last November to tell him he no longer had authority to operate a radio transmitter, says the agency has quite often used �1.113 "to correct errors." The rule states: "Within 30 days after public notice has been given of any action taken pursuant to delegated authority, the person, panel, or board taking the action may modify or set it aside on its own motion."

Gerritsen cites a different section of the FCC's rules to claim it cannot take away his operating authority without first granting him a hearing. He continues to use KG6IRO, although the call sign appears in the FCC's Universal Licensing System as "terminated."

Gerritsen's history of radio-related problems extends back to 1999, when he was arrested and subsequently convicted in state court of interfering with police radio communications. Complaints about Gerritsen to the FCC resumed in 2003 after his release from jail after allegedly violating his parole by owning and operating radio transmitting equipment. Agents from the FCC's Los Angeles Office tracked 2-meter transmissions to Gerritsen's home and observed him holding a small portable radio transceiver. Gerritsen refused a request to inspect his radio equipment, the FCC said.

In the NAL, the FCC said it continues to receive complaints of unauthorized operation of KG6IRO. Unconfirmed accounts allege that Gerritsen also may have transmitted on various public safety frequencies, although the NAL does not cite such allegations.

Earlier this year, Gerritsen landed back behind bars for a month following a federal trespassing conviction. He received the maximum 30-day penalty plus a $2500 fine and court costs. It's not known if Gerritsen paid the forfeiture. Imposing a fine on Gerritsen is the next step in a case that eventually could lead to criminal prosecution. Amateurs and law officers--some of them also amateur licensees--already have expressed displeasure at the slow pace of progress in the Gerritsen case.

Hollingsworth says Gerritsen's pending Amateur Radio application is back in the hands of the WTB, which also will decide the fate of Gerritsen's General Mobile Radio Service (GMRS) license. The Commission set aside that license last fall, basing its action on what it described as "continuing unlicensed operation and complaints of deliberate interference from transmitters you operate." A Hearing Designation Order for Gerritsen is still said to be slowly working its way through the FCC bureaucracy

ATTORNEY SUES HAM RADIOS

By Steve Schiff - Clarion Staff Writer

Famed San Diego civil rights attorney Albert Ashkenazy, Esq. has announced the filing of a $75 million action suit in the name of his client Jack Gerritsen, of Bell. The tort names the FCC, several national and regional ham radio groups and all radio hams living in the United States and its possessions as defendants and seeks class action status.

According to attorney Ashkenazy, his client is engaged in protesting United States military actions in Afghanistan and Iraq using his ham radio transmitter.
Gerritsen claims he is licensed by the FCC to operate a ham radio transmitter on any radio channel he wants and to say anything he wants. Gerritsen says that he recently discovered that ham radios who disagreed with his political view were turning off radio relay transmitters called repeaters that allowed his transmissions to be heard far and wide.

"They are trying to silence me because they don't like what I am saying about the governments policies in Iraq and elsewhere," says the 63 year old Gerritsen.

"On one occasion they told me I had no license and to get off the air. When I refused they called me all sorts of names and then turned off the radio repeater

to try to silence me. They then conspired to have almost all repeaters
turned
off when I come on the air to state my beliefs. That is an outright
violation of
my right to say what I want at any time I want and any place I want
including on
the ham radio."

Ok, thanks to everyone that replied. I ordered the Extra Class License
manual from ARRL today. Time for an upgrade.

Has anyone used the N4PY software with the Kenwood TS-570? I was looking at the Ten-Tec RX-320 as a sub-Rx and general coverage receiver; mainly due to the DRM 12 kHZ output. Has anyone used the TS-570 and RX-320 as a combo with the N4PY package? Or, even just the software as a controler for the TS? Any feedback is appreciated.

73's - Dave

I buy most of my gear at HRO, but I'm getting to where I'm not exactly smiling at some of the prices. I know ham radio gear is expensive, but I get almost sick to my stomach the thought of paying $90.00 for a rapid charger for my IC-190A.

Is there a better deal on the web anywhere?

To All Readers:

AVOID other companies. Buy Tiny-Tenna, DO NOT BUY ANYTHING OTHER THAN from
DWM communications. Not that the products themselves are EXCELLENT (although many say they are!), but DWM communications is actually a terrific organization similar to the Universalradio. If you say something they do like publicly, they
will pursue you and give you free products for prizes, tell others about this fine employer, and do everything they can to improve theirreputation.

Take a look at the spamming going on in rec.radio.shortwave. All of it is also being fought and won by DWM communication staff. They are currently attempting to disrupt and destroy many of the evil spammers in the radio-related newsgroups, stopping the repeated, malicious spamming of others.

The president of the company, Bill Lauterbach, entered r.r.s. for the purpose of teaching, tutoring and fighting the spamming of the group.

If you give your personal information to DWM Communications, Inc. they never abuse it, they don't put it in ANY computer, and they NEVER give it to others, like selling for mailing lists! This company (that makes the "Tiny-Tenna") is SAFE TO BUY FROM, and if you buy from them you are risking saving alittle money, and keeping your sanity and peace of mind as well!

You should note that this company also advertises freely on radio stations that promote Christian material and carry such programming. This makes the company a GREAT organization, and if you buy from them you are supporting the great company!

The "Tiny-Tenna" product is simply $5.95 shipping, worth EVERY BIT of the parts that no one could build themselves, even a child. Yet they ONLY charge $19.95 for it, making very little probably from the markup.

Take this as a warning, and NEVER buy anything from ANYBODY other than DWM!

DWM's website can be found here:
Here is their NEW URL:

http://www.qth.com/dwm/

Their phone number is 1-517-563-2613

Their address is: P.O. Box 87-W, Hanover, MI 4924

ORDER FROM THIS COMPANY!! You will NOT be risking a lot, and it is
worth it! Keep your sanity, your peace of mind and save money, and
order from no other company other than DWM Communications instead!

If you are wise, please contact the company and let them know how you
feel about the spamming going on in newsgroups! They will help. And
above
all, avoid ordering from other company's at all costs! It will NOT be
the biggest mistake you have ever made in your life!!! But it will be
DARN WELL
WORTH IT!!!!!!! I guarantee it!!!!

Sent via Deja.com http://www.deja.com/
Before you buy.

Been trying to find the cause of excessive rf but lost on a good meter
to use. A friend has so much rf on his ht on one freq that he is unable
to transmit or rec on that freq..Ht picks it up in all rooms and
outside, brought my ht over and the same result.

Would like a good meter anyway and this makes for a great opportunity to
do so.. So any ideas on a good meter to find the source of these
problems?

Jim

How about adding a double pole, double throw switch to the mic so you
can toggle between two radio audio feeds?

Amateur Radio Newsline™ Report 1405 - July 16, 2004

Here's a brief message from Amateur Radio Newsline's Support Fund Administrator Andy Jarema, N6TCQ:

"The following is an advisory. This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator.
We'd like to thank everyone who helped us during our campaign in June, and we'll have the on-air
thank-yous in the next week or so. Don't forget that the Young Ham of the Year Award is coming
up in the next few weeks, so try to note our support address at the end of the newscast, as we're
not out of the woods, yet.

And now, as every week, the latest breaking news of Amateur Radio follows"

Amateur Radio Newsline report number 1405 with a release date of Friday, July 16, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL board of directors discuss BPL and other hot issues, it's still a go with ECHO and a satellite TV company makes a costly move. The details are coming up on Amateur Radio Newsline report number 1405 coming your way right now.

**

BPL AMONG HOT TOPICS FOR JULY ARRL BOARD SESSION

The American Radio Relay League's board of directors sits down for a weekend of critical meetings. Amateur Radio Newsline's Mark Abramowicz NT3V has the preview...

--

Broadband Over Powerline internet access is one of the hottest topics on the ARRL board agenda. It is likely BPL has been the subject of committee meetings leading up to the weekend board sessions.

Dealing with BPL issues is priority No. 1 for ARRL President Jim Haynie WB5JBP. Haynie tells Amateur Radio Newsline in a recent interview, he expects the Federal Communications Commission will act soon on the matter. While it's difficult to put a timetable on how soon, Haynie tells us he wouldn't be surprised to see the panel come out with a decision before the presidential election.

President Bush is solidly behind BPL as part of his broadband-technology initiative - this despite Haynie and the ARRL's plea for him to reconsider. Democratic challenger John Kerry's campaign position speaks of a variety of technologies for broadband but does not directly mention BPL.

Haynie concedes the way the political winds are blowing, some form of BPL activity is likely to be approved.

But the 64-thousand-dollar questions are: How much and where?

With the National Telecommunications and Information Administration already raising red flags about interference, and a BPL industry spokesman throwing verbal missiles at the amateur community, Haynie tells us here at Amateur Radio Newsline he's hoping some FCC commissioners might re-examine their BPL positions.

Haynie calls the recent suspension of the Alliant Energy BPL project in Cedar Rapids, Iowa, an important step. And, Haynie says, he suspects the electric utility industry will have to consider any fallout and who could be next to answer an interference complaint at the FCC.

As to complaints, Haynie says the ARRL will be especially vigilant if BPL becomes a reality. He says the organization will be before the FCC to press interference issues with those who are cause them.

And, he has told Amateur Radio Newsline, he will also press the FCC to fully empower those charged with enforcement issues in the agency to go after BPL providers who fail to resolve any interference complaints.

Among the other items on the board agenda, the status of amateur license restructuring which includes provisions for a "no-code" HF license for entry-level hams.

The July board meeting also is where the announcement of the winner of the Hiram Percy Maxim award comes along with host of other ARRL awards.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Check next week's Newsline for a report on the ARRL board happenings.

(ARRL, NT3V)

**

HAMSATS: ECHO TESTS CONTINUE

Testing of the newest ham radio satellite, ECHO, continues and all is, as they say in the space biz… nominal. The remainder of this week is expected to be spent loading some new code, testing the S downlink and the UHF B transmitter. Note that the S downlink, when in digital mode, will always be at 38.4 kilobits or higher. It is not capable of 9.6 kilobits due to limitations involved in making it work properly at speeds up to 76.8 kilobits. AMSAT is pleased so far with the strength of the 2.45W S downlink. At times the UHF A transmitter will be off or at very low power. They will also be testing transmitters at higher data rates. Listeners should not be surprised or alarmed if the UHF A transmitter is not on or if they are unable to copy it at 9.6k during some orbits.

The Command Team is carefully checking off the tests and measurements that are part of the commissioning process. They ask everyone to be patient. And again, AO-51 is not yet open for use. Any transmissions aimed at AO-51 by other than command stations will slow down the process and delay the day when it is open for all to use.

The coloradosatellite.com/echo web site was off line for a few hours last weekend due to a data center move. Stations who want to upload telemetry should find it on line now.

(WD0E, AMSAT)

**

SPACE: ARISS SCHOOL CONTACT LIST UPDATED

While we're on the subject of ham radio in space, the list of Amateur Radio on the International Space Station, or ARISS, school contacts has been updated. To check if a school in your area is on the list or to find out how to schedule a contact at your school please visit www.amsat.org or http://ariss.gsfc.nasa.gov. There is no "www" in that last URL. Of course, these addresses will be in the print edition of this week's Amateur Radio Newsline report.

(ARISS)

**
Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Los Angeles Unified School Amateur Radio Association Network serving the students in Los Angeles, California.

(5 sec pause here)

**

RADIO LAW: MDS & ITFS SPECTRUM RECHANNELIZED - MDS BECOMES BRS

Big changes are coming to the Multipoint Distribution Service and the Instructional Television Fixed Service. These are better known by the acronyms M-D-S and I-T-F-S.

As part of its ongoing effort to promote the deployment of wireless broadband services, the FCC has adopted a Report and Order and Further Notice of Proposed Rulemaking dramatically changing the rules governing MDS and ITFS operations in the 2500-2690 MHz band.

For starters, the Order renames the M-D-S service the Broadband Radio Service or B-R-S. It does however maintain the I-T-F-S label for Instructional Television Fixed Service licenses and operations.

The newly rechannelized I-T-F-S slash B-R-S band will group high and low power operations together in spectrum chunks. This, the agency says, will make low power two-way data communications possible in some parts of the band.

Finally, to make all this happen the band will soon become 5 MHz larger. This, as restructuring of other services in the adjacent electromagnetic spectrum permits the FCC to extend the low end of this band down to 2495 Mhz. (CGC)

**

RADIO LAW: FCC CLARIFIES ITS ROLE REGARDING INTERFERENCE AND CUSTOMER EQUIPMENT

The FCC has clarified its role regarding interference issues, consumer antennas and Part 15 unlicensed equipment. Regarding antennas, we all know that consumers have the right to install and operate - on property they control - antennas for over-the-air broadcast, terrestrial and satellite reception. Now the regulatory agency has added license-free Wi-Fi antennas of one meter or less to the list of what may be installed. The same one meter size limit also applies to antennas used in conjunction with fixed wireless services that are licensed by the FCC.

In the area of radio frequency interference or R-F-I, the FCC says that it and it alone holds exclusive jurisdiction over the regulation and resolution of R-F-I issues. It adds that regulation of R-F-I phenomena shall be imposed only by the Commission noting that both the FCC and the federal courts have overturned attempts by third parties to regulate RFI matters. This, in light of the FCC's exclusive authority in this area.

To read more go to: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1844A1.doc (CGC)

**

ENFORCEMENT: CATV LEAK RESULTS IN $6400 FINE

A cable TV system in Cornersville, Tennessee has been fined for excessive signal leakage in the aircraft communications band. Small Town Communications Partners has been ordered to pay $6,400 for excessive leakage on 121.2625 MHz.

At that frequency a maximum leakage of 20 microvolts per meter at a distance of at least three meters from a CATV cable is allowed. The FCC says that the measured leaks in this case ranged from 255 microvolts per meter to 2080 microvolts per meter.

The Commission notes that excessive cable TV leakage can interfere with a wide variety of communications. This can include emergency services, aviation, and Amateur Radio.

More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1751A1.doc (CGC)

**

ENFORCEMENT: DIREC-TV FINED FOR UNAUTHORIZED SATELLITE MOVE

The Commission has proposed an $87,500 fine against DIRECTV, Inc. This for repositioning its DIRECTV 3 satellite without FCC authorization.

DIRECTV had filed a request with the FCC for special temporary authority to relocate the DIRECTV 3 bird, but admits that its employees began repositioning the satellite the next day, without waiting for Commission approval.

In setting the amount of the fine, the FCC noted that strict adherence to the rules governing modification of satellite authorizations is critical to minimizing the risk of collisions between satellites. (CGC)

**

FCC INTRODUCES NEW EXHIBIT ON HISTORY OF THE INTERNET

The FCC has introduced the third in a series of exhibits on the history of various communications technologies. The latest presentation focuses on the history of the Internet, including the communication technologies used to access the World Wide Web. More is on line at www.fcc.gov/omd/history (CGC)

**

ON THE AIR: THE .275 YOUTH GROUP NET

Timothy Little, W-8-L-B-O has announced the start-up of a new 40 meter 275 Youth Group. According to his posting on the Q-R-Zed dot com super site, this is an informal ragchew group that meets every Saturday at 9:00 P.M. Eastern time on 7 point 275 MHz, +/- 10 KHz.

Little says that the main purpose of the net is to promote the use of HF by younger hams so that they can get to know one another. The net also tries to help them perfect their operating skills including Morse code operation and D-Xing.

Anyone young or young at heart is invited to take part. More information about this net is on line at www.275youthgroup.4t.com)QRZ.com)

**

THE SOCIAL SCENE: NORTHERN ALABAMA DX BANQUET

The North Alabama DX Club has announced that its annual DX Banquet will be held in conjunction with this year's Huntsville, Alabama hamfest on August 21st. The guest speaker will be Jess Lewis, K-R-4-O-J, from the T-33-C 2004 Banaba Island DXpedition. Tickets are $25 each and available from the NADXC in care of Vic Holland, 219 Cedar Pond Drive, Madison, Alabama 35757-7633. For additional information phone 256-721-9106 or E-mail k4rvh@arrl.net. (E-Mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

CHANGING OF THE GUARD: ASCII DEVELOPER NOW S.K.

Bob Bemer, a computer pioneer who published warnings of the Y2K problem in the early 1970s and helped invent a widely used coding system, has died. This, following a battle with cancer.

While not a radio amateur, Bemer played a major role in how the world's computers operate and, indirectly, in how hams communicate today. He began his career in 1949 working at companies including Rand, IBM, and Honeywell. He also helped develop the ASCII coding system that is used to represent letters, numbers and other characters in the data world. He also contributed the escape key and the backslash to the computer language.

Bemer first published warnings of the Y2K computer problem in 1971 and again in 1979. He also made several public appearances to discuss the issue in the years leading up to the millennium.

Bob Bemer died Tuesday, June 22nd at his home some 120 miles west of Dallas, Texas. He was 84. (Published news reports)

**

EMERGING TECHNOLOGY: FEW KNOW ABOUT DIGITAL TV

The General Accounting Office says that more than 80 percent of Americans are either unaware or only "somewhat aware" of the transition to digital television signals. But federal officials have expressed shock and indignation at the survey results.

Congress plans to sell the analog spectrum that will become available when TV stations convert from analog to digital. Lawmakers are counting on the money to help balance the budget. However, the digital transition may be years away unless more consumers start buying digital TV sets and most are not willing to pay the additional cost. (TechBriefs)

**

EMERGING TECHNOLOGY: CELL PHONE "WAITING LOT" IN OPERATION AT LINDBERGH FIELD

Following the lead of several other busy airports around the nation, officials at San Diego's Lindbergh Field have opened a convenient "cell phone waiting lot." This is a place where drivers can park for up to an hour while awaiting phone calls from arriving passengers. Airport managers hope that the new lot will cut down on the congestion caused by vehicles circling the airport loop, waiting to pick up passengers. More is on-line at http://tinyurl.com/yplws (CGC)

**

ON THE AIR: 6 METERS ACROSS THE ATLANTIC POND

It's looking like it could be a big DX season for hams and SWLs on both sides of the Atlantic. GB2RS reports that during a Sporadic E opening on June 19th a path opened from Europe to North

America. The Maximum Usable Frequency rose at least as high as the FM broadcast band. A North American station was received on and recorded at 88.5 MHz between 13:10 and 13:30 UTC. During the event, trans-Atlantic television carriers were also received on 55.25, 61.25, 67.25 and 83.25 Mhz. (VHF reflector)

**

50 & ABOVE: 144 MHZ QSO DATA WANTED

If you've made any long distance 2-meter contacts in excess of 1,600 miles, or 2,600 kilometers, Volker, DF5AI wants to know the details of your contacts. He's interested in the frequency, the UTC time & date, and particularly the grid square locator. He's also quite intrigued in double-hop sporadic E skip. He can be contacted via his website. It's in cyberspace at www.df5ai.net (VHF Reflector)

**

WORLDBEAT - ISRAEL: NEW SIX METER BEACON IN ISRAEL

4X4SIX is the new 6 meter Israeli beacon operating on 50.080 MHz. 4X6ON and 4Z5AY built the station which announces its call sign on CW around the clock. The beacon is located in grid square KM72JB running 5 watts out to a J-Pole antenna. (Hagal)

**

DX

In D-X, the Ohio Penn D-X Newsletter reports that DL3PS and VE3ZIK will be active on 40-6 meters from Bilice, Croatia through July 31st. The call signs being used are 9A slash VE3ZIK and 9A slash DL3PS. While VE3ZIK is one of the Web Administrators for the www.contesting.com info website, there will be no QSL information there until August 3rd.

Meantime word that D-H-9-Y-A-T will be active portable CU7 from the Azores. Listen for him from August 3rd to the 20th. Activity will be on 40, 20 and 15 meters QRP on CW. QSL this operation via the bureau. (Various DX sources)

**

THAT FINAL ITEM: MUSEUM SHIPS CASTING FOR CONTACTS

And finally this week, dozens of ships from around the world get "radio-active" July 17th and 18th for the annual Museum Ships Weekend Event. Amateur Radio Newsline's Mark Abramowicz, NT3V is back with us and he checks in on preparations being made about the U.S.S. New Jersey....

--

Dave Burgess, WA2TVS, is chief engineer for the Battleship New Jersey Amateur Radio Station aboard the New Jersey. Look for NJ2BB (New Jersey 2 Big Battleship) to be very active during the event.

Burgess says the weekend was the brainchild of the USS Salem Radio Club, K1USN, in Salem, Mass. He says it actually started in 1997 as a way to get museum ships at dry-docks around the world to get on the air by way of amateur radio.

Burgess says it's the New Jersey's third year taking part.

"Last year, the number grew to about 87 or 88," Burgess says. "Right now I think the pre-registration right now is about 77. But seems like there's always a half a dozen or so right at the last minute that get their act together and get on the air."

Burgess says the event gives radio operators around the world a chance to contact a variety of these special ships and their volunteer crews.

"One is just to have fun and a reason to get the ships on the air," Burgess says. "Of course, whoever is in charge of taking care of the ship gets some PR out of it, we hope.

"They have an opportunity for the public to see amateur radio which is new to a lot of people. But to advertise the ships worldwide. I never knew there were so many ships out there. Just museum ships that is. It's amazing how many there are out there and what their diversity is."

Burgess says there are tugboats, river boats, submarines and even a midget German submarine left over from World War II. All are part of the museum ship flotilla.

He says there's no contest exchange involved in this one. Ship operators get on the air and look to contact land-based stations as well as other museum ships. It's a chance, Burgess says, to showcase a ship and its history. And, of course, there's an exchange of QSL cards and you can be guaranteed some pretty impressive history and photos of the ship you contact.

For the New Jersey's part, Burgess says he's planning an active weekend with operations through the evening of July 18th.

"We'll be on all HF bands, probably concentrating on 20 (meters), but we have capabilities (with the) ship's antennas to do 160 through 10 meters," Burgess says. "We'll be on all modes. This year we'll be introducing true, green-key operation for teletype. We'll be using the ship's old mechanical teletype machines to get on the air."

Look for NJ2BB, Burgess says, for a memorable QSO and QSL.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Camden, New Jersey, the home of the Battleship New Jersey.

--

Thanks Mark. This sounds like a great opportunity to collect some very interesting "wall paper" for the ol' shack.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editor's desk, I'm Don Wilbanks, AE5DW saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Hi!

I hope somebody can help me. I bought one of those Radiosondes
currently doing the rounds on eBay with a view to using the
transducers as the basis of my own weather station. I would prefer to
use most of the existing circuitry since it's all calibrated. Does
anyone have any circuit diagrams for these things or know how to
decode the data from the transducer interface circuitry?

Many thanks,
aiw_2000

Beware of these e-mails, ALSO, the same thing is being done for PAYPAL!!
BOTH Ebay and Paypal will NEVER ask you for this information via e-mail.
If you respond to them, they look EXACTLY like Ebay and Paypal.
I would not even respond to it.  Just forward them to spoof@ebay.com
and I believe the other is spoof@paypal.com.
If you click on the link given by them you can "sign in" with bogus username and
passwords.
BEWARE!!!!
You folks might want to pass this around to everyone and list it in other
groups.

Actually they will not when you look closely. Any form legitimately requesting sensitive personal data will via a 128-bit, encrypted, secure link, NOT email, and SCAM ARTISTS are incapable of duplicating these. (Email is not secure.)

Both Explorer and Netscape contain icons at the bottom of the browser window to show when such a secure link has been established and in effect with your computer, and both allow you to check the security level established, and inspect their certification credentials (the security Certificate that they hold) for authenticity.

Normally eBay and Paypal go through this ritual only when you are first open your account and is required.

You'll see the identical security measured being taken when doing online business with any reputable dealer when credit card number are needed, and also when you access your "On-Line Banking" with Bankamerica, Fleet, Citicorp, and Chase Bank. In fact, you won't even be asked to enter your password or PIN number except via a secure, encrypted link.

Harry C.

Mike, I stand by what I previously posted.

I suggest that you go back and more carefully re-read it before dismissing it's factual content.

Learn what a secure link is, and how its use is indicated on your web browser screen.

Learn how to check the seurity level of the link, read its Certificate, see which security firm issued the certificate, its expiration date, etc.

Every single one of the "Recent Phishing Attacks" that are cited represent rather crude email bait, some leading to a non-secured, non-encrypted, and obviously scam URL that aim to fool only the most naive and inexperienced net users who evidently never bother to employ common sense

Of course it's precisely these net ignorant users that are the targets of the scammers, and nothing except learning how to employ the security measures alrady existing on the web is going to protect them from really stupid acts based total upon their own to learn how the system operates prior to using it.

It's very similar to the confidence artists of current and earlier generations who relied on the ignorance and/or greed of their victims for success in perpetrating their scams. All scams that I have seen rely on one or the other of these factors being present in order to rip someone off of something. On top of that, these scammers justify their actions as an educational exercise of value to their victim, which in many cases it certainly is.

Harry C.

p.s. When bidding on eBay, there are a number of measures that you can employ to protect yourself from being scammer. Always carefully check the sellers feedback and how long he has been a member of eBay. Be wary of "Power Sellers" since these are usually firms that market mass volumes of usually "distressed" merchandise. Be particularly wary of sellers having zero feedback, particularly if they have been a member of eBay for less than a month or two. (Prior to bidding, communicate with these new sellers by email and learn what their story is, realizing that someone selling on eBay has to start somewhere. Still, it's most unusual to find a seller on eBay that has not accumulated some level of positive feedback previously as a buyer. It should be regarded as suspicious when that is not the case.)

I recently picked up an Eberline model PAC-ISAGA Alpha Counter radiation
meter and I need to know what to set the high voltage to.
This unit has a scintillation probe to measure alpha particles. This probe
is different from the Geiger/Meuller probe for gamma measurements.
All I was able to find was an army parts list for the external case.
What's interesting about this unit is that it appears to have a serial
number of 001 engraved on the top cover.

Any info would be greatly appreciated.

Thanks,
Larry VE3LRI

Wedge,
Most people just use a mobile rig with a 12 Volt power supply for FM work. If your referring to weak signal SSB, CW, satellite, moon bounce, etc. there are plenty of base stations available but at a much higher price than an FM only mobile rig.
73,
Bill Sinkhorn

HamBlog http://www.hamblog.com is a weblog host exclusively for amateur radio operators. The hosting service is free of charge.

Many hams have questions about blogging. If you are wondering what the bloggosphere is all about, there is a definition of blogging on our main page, along with a link to a very good blogging FAQ list. (Frequently Asked Questions) The information there will give you a solid footing as you step into the blogging world.

Why a "HamBlog"?

Hams have a lot of information to pass on to each other that traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. Weblogs are highly flexible and highly individualistic. It is our hope that the public weblogs at HamBlog will provide a wellspring of knowledge about Amateur Radio that would be impossible to access or distribute by traditional methods. Perhaps in some way HamBlog will expand the capabilities of our present "Elmering" setup, which many feel has suffered and diminished in recent decades.

As is the case outside of the Amateur Radio community, word gets around about outstandingly informative and useful weblogs. There is a global syndication system for weblogs that HamBlog,Com participates in, just as other blog hosts do. What is different about HamBlog is also the thing that makes it special.... It's all Hams!

If you are an Amateur Radio operator who would like to post a weblog of your activity for the benefit of your fellow Hams, where would you go?

HamBlog.Com, of course!

Hi all,

Here is a link to a photo of an RF connector associated a valve/tube RF power amplifier containing a QQV03-20A.

http://www.geocities.com/markaren10/misc/RF_CONN.JPG

I would guess that the amplifier is designed to run at ~400MHz since Grid and Anode tank circuits are more strips of copper than coils.

Any idea what the connector is ? The diameter of the plug would be around 0.2" dia, with a small diameter centre pin.

Thanks,

Mark.

I'd suggest trying to sell it, of course describing the problem to the
prospective buyer.  Since the 2m module is non-functional, the radio is
worth no more than a used single band radio and that would not be enough to
be a reasonable trade for a high power tuner.

The link appears to be broken, but I can't see why. Cut and Paste it into your browser address and the picture should display OK.

The unit was made in the UK by Cable and Wireless, no idea of date.

Any takers about this RF connector ?

- Mark.

Subject: Motorola UHF MTS 2000 Trade
Message-ID: <20040630105612.04158.00000720@mb-m15.aol.com>
Xref: g2news1.google.com rec.radio.amateur:312

I currently own a MTS 2000 UHF hand-helds and wish to trade one for a VHF version or another HT that is VHF.

The Motorola MTS 2000 is a simple-to-use portable radio that provides all of the standard features. Some of these include:
48 Modes
Non-keypad
Top mounted 6 character display

Freq 403-470MHz range

Let me know what you have to trade for this fine HT.

Here's an Icom IC-Q7A hand held radio on Ebay. It might be a tiny radio,
but it has many of the features of the bigger HT's. Click the link below &
find out more. I will ship to the United States only.

I was wondering what effect aluminum foil (used as a radiation heat
shield) would have on GPS signal reception? The scenario is a small
payload container (approx 10" cube) covered in polystyrene, with a
handheld GPS reciever located near the top on one corner.

Would aluminum foil on the inner sides (and/or bottom) interfere with
the reception of the signal? I'm worried about possible reflection or
other mechanisms of interference that might occur and prevent good
reception. Basically, my question is, would foil on the sides or the
bottom pose a reception problem? Are there any "configurations" that
might not pose a problem? (i.e. 2 furthest sides only, half of bottom
only, etc).

Thanks in advance for any insight!
Dave

Does anyone have plans for a circuit that will allow this? I run a dual band mobile, and (gag) 11 meters in my Jeep, and with the top down at highway speeds I can't hear the 11m. I have a speaker mounted on the roll cage behind and above my left ear. I would like to pipe the 11m thru this speaker also.

Any Ideas?

GPS antenna at a top corner...

> Would aluminum foil on the inner sides (and/or bottom) interfere with
> the reception of the signal?

"Inner"...do you mean inside the poly? Actually I think this should be irrelavant, but had to ask.

You describe an antenna above a foil "box" or partial box. Off the cuff (based upon an instant mental review of the stuff below) I'd say no effect to worry about.

In depth thinking says...foil can reflect signal which can be aiding or opposing the signal strength.   Also depends upon the antenna pattern. If it favors the uppper half-hemisphere, like it should, then ther'll be little effect.

If any effect at all, it WILL effect each satellite differently--aiding
some, opposing others.

Practical answer, inshort, try it. In long:
If you have THE GPS, mess around with oil or other plate below the
antenna to see. I tried something similar with my Garmin GPS V and saw no
serious effect, but those signal strength bars seem quire fickle.

--

Avoiding a twitch... With just the radios & speaker, you'll loose
considerable power because it will take a resistive divider. With an
amplified speaker you can do the resistive combining at a lower power where

the combining loss isn't an issue.

OR...Dig into both of the radios and feed the (after volume control) audio
from one into the other's audio amp.

On my computer, I use a $6 Y adapter plugged into the speaker jack of my sound card so I can use either the speakers or headphones, depending on what I'm doing. No noticible problems. They sell Y adapters that would do the same, but for two radios into one speaker. Is there any reason you can't just add another speaker? Radio shack sells a small one, about 3"x3".

Xref: g2news1.google.com rec.radio.amateur:326

I am selling an almost new RadioShack PRO-2052 1000-Channel Dual Trunking Trunk-Tracker Home Scanner. This scanner is one of a new generation of scanners designed to track Motorola Type 1, Type 11 (such as Smartnet and Privacy Plug, GE/Ericsson EDACS), and hybrid analog trunking systems.

Some Features Include: Flexible Operation - Twenty Channel Storage Banks - Weather Alert - Remote PC Function - Five Scan Lists - Triple-Conversion

Circuitry - Scan Delay -Lock-Out Function - Priority Channels - Five Service-Search Banks -HyperSearch and HyperScan - Data Signal Skip - Manual Access - Liquid-Crystal Display - Display Backlight - External Antenna Terminal - Memory Backup - Key Confirmation Tones -.   Duplicate Channel alert - Disconnect Tone Detect and more....

Frequency range is 29 MHz - 1.3 GHz with breaks.

Physical condition of unit is like perfect condition (A little dusty and was mounted using velco which pulls right off!) and hardly ever used. Comes with manual, antenna and power plug.

Trust me you will love this scanner, its a great addition but too anyones shack! Selling on Ebay..
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5707588699

Happy Bidding or just click BUY IT NOW ($150)

Or if you wish to buy it from me here let me know and I will take it off EBAY.

Jeffrey

Subject: FS: Motorola GM300 UHF
Message-ID: <20040701124208.19192.00001011@mb-m06.aol.com>
Xref: g2news1.google.com rec.radio.amateur:327

I am selling a Motorola GM300 UHF Mobile which is 16 Channels, at 10 watts of power. 430.0-470.0 MHz range and model number is M04GMC29C3A. Specific communication needs are met through multiple bands with variable power levels. Two PL/DPL codes for added privacy & capability for many separate talk groups. User-programmable Priority Channel Scan for monitoring & control of channels with activity. User-friendly!!!

Offer maximum wide coverage due to high sensitivity receiver and additional protection against interference for local operation.

Users' ever-changing needs are met as dealers can easily add or change frequencies or other characteristics like PL or Unit ID.

Compatible with GP300 radios as 16-channel model provides Quik-Call II, MDC-1200 & DTMF signaling formats.

Busy channels are reduced through the Time-out Timer feature where the radio automatically dekeys when the transmission limit is reached.
Compact and Reliable

The unit is in almost perfect looking condition (Dusty because its been sitting around) and comes with microphone and a Motorola antenna which all you need is a mount. GUARANTEED to work!!!! This unit is perfect addition to anyones collection of radio's!   Item is listing on EBAY at the following address:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3825116369

Good bidding or just click BUY IT NOW ($150)

Or if you wish to buy it here.. let me know and I will glady cancel it off Ebay.

Thanks
Jeffrey

Wrong problem...
    Poster wants to drive ONE speaker from TWO radios...

The "Y" will drive audio power from one radio into the other radio...not
good.

minus voltage from the rating may not do the job.

Also, what the _battery_ calls for is one thing, what the HT needs as
input to charge the battery is entirely different.

Many HTs are looking for (big surprise) 12-13.8 VDC ,similar to what
is available on mobile applications.

As always, the manual for your specific unit is the best resource.

Happy trails,

Gary (net.yogi.bear)

Radio Shack sells mobile speakers that are about 3"x3". I can't believe he
doesn't have room for that.

I wonder if this was not an Associated Press dispatch. It does sound a
bit journalistic.

Ron,

In my opinion, Ten Tec is one of the leading manufacturers and best support organizations in the world. They are world class in their product line, innovative, and complete. They are world class in their technical product support group as well.

I have owned several Ten Tec rigs over the last 15 years or so, and I have never been disappointed.

YOur new Jupiter is a fantastic rig.

The problem isn't room.. Remember where I said the speaker is? Right behind my head (up and left a little). Now I don't know if you've ever been off-road in a Jeep, but things hanging by your head can tend to cause headaches.

The speaker I have now hasn't hit me yet (I'm 6'4" tall) but if I put another beside it, I'm sure to have lumps.

I didn't ask where I could find another speaker, to which the answer would have been, "In your garage you lunkhead."

I asked how to drive 1 speaker from 2 radios, preferably without toasting the audio circuits of either radio.

Thanks for reading my posts..

Amateur Radio Newsline™ Report 1403 – July 2, 2004

Amateur Radio Newsline report number 1403 with a release date of Friday, July 2, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The score is now Ham Radio one, BPL zero; OSCAR Echo is alive, and business is good for CW.

Find out the details on Amateur Radio Newsline report number 1403 coming your way right now.

(Billboard Cart Here)

**

BPL: SCORE ONE FOR THE GOOD GUYS

A major broadband-over-power line pilot test by Alliant Energy in Cedar Rapids, Iowa is shut down after local hams document the harmful interference and the Federal Communications Commission gets a formal complaint from the A-R-R-L. We get the details from Amateur Radio Newsline's Mark Abramowicz NT3V:

****

It took nearly three months to accomplish the mission, but amateurs in Cedar Rapids - armed with ample data and the muscle of the American Radio Relay League - convinced Alliant to prematurely halt their B-P-L test.

Jim Spencer, W0SR, first discovered the interference on his HF radio right after Alliant launched its B-P-L testing March 30.

Spencer, who quickly mobilized other Cedar Rapids hams to form a technical committee, says the interference was so severe that it wiped out his and others' ability to use their radios.

Spencer says the group worked with Alliant officials to try to resolve the interference and conducted several test measurements with the utility's cooperation.

Spencer tells Amateur Radio Newsline the group appealed to Alliant to shut down the system and stop the interference on several occasions. But it was clear the B-P-L industry was telling Alliant's managers something else.

"There's a lot of regulatory uncertainty here," Spencer explains. "And that what the hams were calling harmful interference - in my case S-9 signals, you know, every 1-plus kilohertz across the band, they were being told that wasn't really harmful.''

Spencer says communications between his technical group and Alliant officials were civil, but they accomplished little action. He says he and others filed complaints with the FCC.

"I think in 21 communications I received one simple response basically told me to go back to the power company - the operator of the system," Spencer says. "And, of course, I had done that all the time. So, we had been asking the utility company to close it down, we had been asking the FCC to help us and then the ARRL went and escalated that."

Wade Walstrom, W0EJ, is the ARRL's Midwest Division Director. He says the league's FCC complaint finally got the utility's attention.

"The thrust of the complaint was that they were now aware that the system was causing interference and didn't shut the system off so now that makes it willful interference," Walstrom said...

Alliant stopped the B-P-L pilot test on June 25 saying it had gathered the necessary data to make a determination on whether a general rollout of B-P-L would be worth pursuing, according to Spencer. He says Alliant's project leader told him the ARRL's FCC complaint was just one factor in the company's decision.

"Obviously we're happy, but we didn't feel like we had won," Spencer said. "We felt like this was a technical problem and that we tried to communicate some of the technical parameters to them and that they'd made a good business decision."

Spencer says an Alliant representative told him the company has no plans to pursue B-P-L at this time.

"In order to distribute it out to a sparsely-populated rural area with all the equipment it would take, it's not clear that this thing makes economic sense," Spencer says. "And that this really can meet the goals of the rural user which is one of the things that people touted."

The ARRL's Walstrom is cautiously optimistic Alliant's decision might have a ripple effect.

"We would hope that other utilities or other organizations that were looking to possibly use B-P-L as a source of revenue will look and see the decision that Alliant has made and re-think their own plans and hopefully decide that maybe there are other ways to provide broadband internet connections to the population as a whole," Walstrom says.

Walstrom says the Cedar Rapids group led by Spencer has set a precedent.

"All the proof on how well it's going to work isn't there yet," Walstrom says.

"And the proof that we have established here in Cedar Rapids and is coming out from other parts of the country is that it's not an interference-free system by any means and in fact it causes a lot of interference and we've documented that here."

Spencer says his committee, consisting of a group of engineers - most of them retired from Rockwell Collins - stuck strictly to technical evidence in communications with Alliant. But he says its clear B-P-L has taken on a very political tone.

"Obviously the problem has got a lot of political implications, but the thing that hams can do is remain professional and keep it primarily on a technical level," Spencer says.

The ARRL's Walstrom says if he could stand before the FCC panel to make his case, he would strongly urge the commissioners to postpone action on or even walk away from B-P-L.

"I think they need to delay it until they're satisfied that they're able to mitigate any interference problems at all and by mitigate from an amateur radio standpoint that really means eliminate," Walstrom says.

Spencer adds, there are no hard feelings toward Alliant. Spencer says he and members of his technical group still have a good, working relationship with the utility.

"We've had quite a bit of communication back and forth through this whole thing," Spencer says. "I mean I've had many, many e-mails and some phone calls and I would say that it was pretty positive and still is."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

****

In addition to operations in Cedar Rapids, Alliant also provides utility services to customers in sections of Minnesota and Wisconsin, and a small strip of northwestern Illinois

(W0SR, ARRL)

HAM RADIO IN SPACE: ECHO IS UP AND RUNNING

The newest Amateur Radio satellite is now in orbit and doing fine. Chuck Green, N0ADI, reported by phone from the Baikonur Cosmodrome that the launch of AMSAT Echo and the other satellites occurred on time on June 29th at 0630 UTC. He watched the rocket climb out and said it appeared to be flying straight and true. A second phone call from Chuck 18 minutes later confirmed that the launch carrying AMSAT OSCAR Echo was successful and that all spacecraft had separated successfully.

Chuck was assisted in the final integration and checkout process at Baikonur by the team from SpaceQuest which included Dr. Dino Lorenzini KC4YMG, Mark Kanawati N4TPY, and Lyle Johnson KK7P. The SpaceQuest team members are also AMSAT members and volunteers.

First contact with Echo was at 1452 UTC on June 29th. After collecting a bit of TLM the 435.150 MHz transmitter was turned off at 1500 UTC. The preliminary keps were observed to be pretty close. The first look at Echo’s telemetry shows things are looking good. The battery was fully charged and the panels were delivering about 950 ma, which is fine. The panels were supporting the transmitter power adequately at about 2.3W output. The bird appeared to be tumbling as expected. Internal temperatures are around 10 degrees Celsius which is also as expected.

On the second pass the loading of software began and good progress was made.

Telemetry continues to look very good. While fades clearly indicated Echo continues to tumble (as expected), at 2.2 Watts output good bits were received without difficulty. Rather than turn the transmitter off at the end of that pass, based on a very good looking power system, the power was turned down to about 0.3 Watts.

The hour between passes was spent closely examining the captured telemetry and comparing it to pre-launch testing, as well as tweaking the keps a bit.

During the second set of passes approximately twelve hours later, the command team finished loading the housekeeping software. The housekeeping task is up and running as of June 30th at 0525 UTC. With more data available on the power systems performance the transmitter has now been left at about 1.2W.

The morning passes on June 30th concentrated on gathering telemetry. The evening passes continued with checkout activities.

A telemetry decode program, TLMEcho, is available for those who would like to view and report data from Echo. It may be downloaded from AMSAT.ORG in the Echo project area, http://www.amsat.org/amsat-new/echo/

If you record telemetry please send the CSV files to ke4azn@amsat.org.

Please do not transmit to Echo until checkout and commissioning has been completed and the satellite is made available for general use. Unexpected uplinks may cause delays in verifying the proper operation of ECHO and delay the opening of the transponders to general use.

(AMSAT, WD0E)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7SKO repeater serving Arizona, California and Nevada.

**

WITH NEWSLINE: SEND US YOUR ID - PLEASE

Would you like to ID your own repeater or bulletin station here on Amateur Radio Newsline? Well here is how you can do it. Record the following sentence and include the call sign and location you want to honor.

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the xxx repeater serving yyy zzz. The xxx is the call sign. The yyy and zzz are the city and state.

Then, take the tape and mail it to Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clarita, California, 91350. As time permits, we will select an audio I-D and include it in the newscast.

All tapes submitted become the property of the Amateur Radio Newsline and cannot be returned. Again, the address to make yourself a part of this bulletin service is Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clarita, California, 91350.

**

RESCUE RADIO: VA HOSPITALS SAY YES TO HAM RADIO

Hospitals in Roanoke, Virginia, will soon be ham radio equipped. Mike Knight, K4IJ, reports through the Repeater Journal that a budget of twenty-five thousand dollars has been approved for the installation of Amateur stations at between ten and twelve primary healthcare facilities in the Roanoke area.

Knight says that the system will include a dual band base radio, a mobile radio, a power supply, antennas and full lightning protection at each hospital. Also going on-line will be a pair of commercial grade FM voice repeaters with back-up generators, and a dedicated digital repeater. The voice systems will have IRLP and Echolink tie-ins to communicate outside the local area.

When completed, the Roanoke system will consist of five to six linked repeaters. The base stations will be connected to each hospitals emergency power system to keep them on the air.

(Repeater Journal)

**

RADIO LAW: COURT SAYS NO TO EXPANDED MEDIA OWNERSHIP

A U.S. Court of Appeals in Philadelphia has thrown out most of the Federal Communications Commission's new and controversial media ownership deregulation. Its Thursday, June 24th decision means that for the time being, ownership levels of broadcast properties and related media will remain at current levels.

Back on June 2nd of 2003, the FCC's Republican majority voted to dramatically ease a prohibition barring daily newspapers from buying broadcast stations in their markets. The agency lifted caps limiting how many radio and TV stations a broadcaster could own in the same area.

But in its 2 to 1 decision the Philadelphia court said that while some relaxation of the ownership limits might be reasonable, the agency had failed to adequately justify the limits it had put in place. The court announced that its original stay on the FCC's media ownership deregulation would continue until the agency fixes the regulations to the court's liking.

(TV Week)

**

ENFORCEMENT: TOO MUCH MORSE CODE

The FCC is asking a Missouri ham why he is running a Morse code training program smack in the middle of the 40 meter band. The target of the inquiry is Paul D. Westcott, KC0OAB of Purdy who apparently has code practice on the air around the clock.

Its June 21st letter to Westcott notes that the agency had previously discussed this matter with KC0OAB and was given assurances that the transmissions he was making were for Morse Code practice. Since that time the agency has received another complaint which alleges that the purported 40 meter code practice transmissions are 24 hours a day, seven days per week. The FCC says that due to the crowded nature of the 40 Meter Band, it is extremely inconsiderate to take up spectrum in that area for transmissions 24 hours a day. This, even if it is purportedly for “code practice” purposes.

The agency has posed several questions to Westcott to explain his operation and was given 20 days from the date of the FCC letter to provide a very detailed response.

**

ENFORCEMENT: NO LICENSE - DON’T OPERATE

The town of Reseda, California, is only about 10 miles from the Newsline studio. It’s also the place where the FCC alleges that someone has been operating a ham radio transmitter without the benefit of being a licensed ham.

In a letter to a resident identified as Joseph A. Mosbergen, the FCC says that he or someone in his residence has been operating radio-transmitting equipment on several Los Angeles area Two Meter Amateur Radio repeaters. The agency warns Mosbergen that this is a violation of it rules and will subject him or whoever is proven to be operating to punitive action. This could include a fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment. It also tells Mosbergern that this is the last warning that he will receive.

**

HAM RADIO BUSINESS: HEIL TO MARKET CLEAR SPEECH SPEAKER

Turning to the ham radio business scene, word that the NCT Group has appointed Heil Sound Limited as its prime worldwide manufacturer and distributor of the Clear Speech Speaker system. Under the terms of the deal, Heil Sound will distribute Clear Speech speakers to their present amateur radio dealers and commercial broadcast distributors. Also, the Clear Speech speaker will be improved and several new products will be brought to the market using the NCT Group technologies. According to Heil Sound these new product models are in development and will be available for market by the end of July. More is on line at www.heilsound.com

**

COMMUNICATIOS NEWS: DUAL-CORE PROCESSORS ON THE WAY

Tech News reports that Advanced Micro Devices plans to begin selling microchips with the equivalent of two microprocessors in one next year. The Sunnyvale, California based company said it plans to offer dual-core processors for data-serving business computers in the middle of next year, and for high-end home computers in the second half of next year.

Dual-core technology combines the power of two processors in one package. This permits the creation of a more powerful computer and increased computation power when multitasking.

Last month, Intel said it would bring dual-core chips to the marketplace in 2005. That’s more than a year ahead of schedule.

**

HAM RADIO BUSINESS: CW IS GOING STRONG

If you think Morse code is on its way out, the ham radio business community probably disagrees with you. At least that’s the impression one gets thumbing through the articles in the July issue of CQ Magazine.

Not only are the ads for Morse related products holding steady, but the new products area has some reviews of the latest CW related products. And not to be outdone, Dave Ingram, K4TWJ, devotes his World of Ideas column to Morse Keys from around the world.

If you are a Morse lover, this is the CQ edition for you. It’s on your newsstand now. More information is on the web at www.cq-amateur-radio.com.

**

THE SOCIAL SCENE: COME TO THE TENNESSEE HAM BREAKFAST

On the ham radio social scene, the Middle Tennessee Ham Breakfast takes place at the famed Tennessean Truckstop on the second Saturday of every month. People begin to gather there at about 9 a.m. and it’s billed as a chance to meet the middle Tennessee hams you may have contacted on the air.

Interested in attending? For full information simply send a note to kenbreed@surfmore.net or call Ken, AI4DV at area code 931 – 424 – 9523 during normal business hours.

(Do Not Read: Repeater Journal)

**

THE SOCIAL SCENE: ROANOKE VA. IN JULY

And still in the South, mark down July 31st to attend the annual Roanoke Hamfest. This event is sponsored by the Roanoke Valley Amateur Radio Club and will be held at William Byrd High School in Vinton, Virginia starting at 8 a.m. local time. Full information on this friendly event is on line at w4ca.host4www.com

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

COLOR TV IS CELEBRATING ITS 50TH ANNIVERSARY THIS YEAR

Now for a bit of a history lesson. Although color TV transmissions were in the development stages many years earlier, the broadcast industry is celebrating its half century mark this year. This is because it was 50 years ago that color broadcasts were initially made available to the public.

Now, National Public Radio has posted a story and some interesting historical resources at its website. It is very interesting reading. That URL is in this week’s printed Amateur Radio Newsline report.

(www.npr.org/features/feature.php?wfId=1789944 (CGC))

**

EMERGING TECHNOLOGY: NEW DVD PLAYER FILTERS OUT BAD WORDS

Wal-Mart is selling the world's first DVD player that can seamlessly skip over violence, swearing, nudity and other potentially offensive movie content. The $79 unit features technology by ClearPlay and is manufactured by Thomson Inc. under its RCA brand.

The DVD player is the latest development in a legal battle between the Salt Lake City-based software company and Hollywood. Members of the Directors Guild of America filed suit against ClearPlay in September 2002, when the filtering product was available as a computer program claiming it impinges on intellectual and creative rights. Those legal proceedings are still under way in Colorado's 10th District Court. Both sides currently are waiting for a ruling on a summary judgment filed by ClearPlay.

**

WORLDBEAT - SLOVAKIA: FIRST CELLPHONE VIRUS ANNOUNCED

On the international scene word that a group of underground virus writers have announced what is believed to be the world's first worm that can spread on advanced mobile phones. According to news reports, the worm named Cabir, was sent to security software firms in the United States and Russia by a member of 29a.

29a is described as a group of virus writers from the Czech Republic and Slovakia who pride themselves in creating proof of concept malicious viruses. Thankfully, Cabir has been found to have no damaging code attached that might destroy files or execute other harmful operations.

**

WORLDBEAT – UK: RSGB QSL BUREAU CHANGE

On a more positive note, word that Marc Litchman, G0TOC is the new RSGB QSL Bureau Sub-Manager for the G7AAA through G7ZZZ series of callsigns. Litchman can be reached at 26 Oak Tree Close, Loughton, Essex IG10 2RE, in the U-K.

**

WORLDBEAT – NEW ZEALAND: ZL1AN HONORED FOR EDUCATIONAL WORK

And a word of congratulations to New Zealand’s Dr. Gary Bold, ZL1AN. Bold is a physics lecturer at the University of Auckland and he has been awarded the Prime Ministers Supreme Prize based in part on his 43 years of dedication to teaching.

Bold has taught every course in the physics department, all courses in geophysics signal processing and network theory. He has also devised and revised experiments and designed the curriculum for many second and third year physics courses. A dedicated C-W enthusiast, in his spare time he writes the NZART Break-In Magazine column "The Morseman."

The presentation was made at the recent 2004 Tertiary Teaching Excellence Awards. ZL1AN was one of 12 academics from nine institutions presented with awards, each of which brings with it a $30,000 prize.

**

DX

In D-X, word that several O-H prefix operators will be operational from Aland Island as OH0I during the CQ Magazine and RTTY Journal RTTY DX Contest. This, from September 25th to the 26th. They will operate as a Multi class 2 entry using multiple beams and vertical arrays on the low bands. QSL via OH3BHL.

And keep an ear open in September for RA3AMG from Cyprus. He will also be active in the same contest signing P3B. QSL via his home callsign.

Lastly, ST2DX will be active from the Sudan until the 10th of July. Look for him mainly on SSB, with some CW, on all bands between 30 and 6 meters. QSL this one as directed on the air.

**

THAT FINAL ITEM – HAMMIN’ OLDIES ON WBCQ

And finally this week… who says hams and short wave listeners are nothing but a bunch of stuffy old geezers?

The Peacock Project is a group of Internet broadcasters that have banded together to present a variety of music eras, styles and talk over WBCQ on Saturday nights at 8PM Eastern time, which is Midnight Universal Time, Sunday. Named in tribute to one of their group, Rob Peacock, who suddenly passed away in January, the show features a different host each week with a program that is unique to his own musical preference and personal presentation.

The first weekend of every month will feature Dave Kirby's look back at Old Time Radio and some non-English language versions of American songs. The second weekend is The Voice of Savage Henry, a 1960's and 70's "Garage Band" rock show hosted by Steve Evanchuck, KG8KO. Tim Gaynor is heard directly from Australia on the 3rd week and the 4th week is Steve Coletti, aka “Big Steve Cole”. Four times a year there is a 5th Saturday to the month and on those weekends it is time for "Hollow-State Hound", a show scheduled to feature big band music with Mike "The DX Hound".

The broadcasters got together in an odd way, and going on WBCQ's 7415 kHz frequency is like going home to where it all started. A few years ago there was a group of ham radio operators who were also listeners to shortwave broadcasters and utility stations. Under the umbrella organization of the Association Of North American Radio Clubs, (ANARC), they would join into a ham traffic net every Sunday morning on 7240 kHz to compare their station loggings. While the net still has a lot of good memories for those who joined in or only listened in, the group eventually disbanded. The net then moved to an Internet Relay Chat channel that was already in existence.

To a few die hard members like Dave Kirby, N1DK, the discontinuance of the radio net was only a minor setback. Dave began doing weekly reports by way of the Cyber Shortwave real audio file that was available for download by anyone. It was at the suggestion of member Pete Costello that Dave began doing his presentations as a live interactive program by way of sending sound via live365.com and receiving typed comments back from listeners via the IRC chat channel.

As loggings and SWL news tapered off, Dave began doing more music and off topic bantering. This led the powers that be at the chat room to ask Dave to create his own chat

room for the show.
The kick in the butt turned out to be a blessing as now the door was opened for others who wanted to do interactive radio using Dave's chat room

We hope that you will enjoy the diversity of programming that these enterprising hams and SWLs have created. The Peacock Project begins July 3rd on WBCQ at 7415 kHz and your fellow broadcasters, hams and SWLs at the Amateur Radio Newsline wish you the best.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm),

Don't forget that those right-wing preachers and all other US short-wave broadcasters are licensed to broadcast to foreign locations only. I guess those 800 numbers are for use in the Caribbean and Canada. Sure, that has to be the case.

  You mean if I pick up their broadcast here in the US then that makes
them illegal?

I do think the politicians would listen to the National Association of Religious Broadcasters, or whatever they call themselves.

That's another good point. I think $30 bucks a month might attract alot of buyers to BPL, but it's still not low enough for cheapskates such as myself. I do think the likely number of buyers is researchable, but reporters don't always do research. Since the number is unspecified, I'll assume the BPL folk didn't bring up this fundamental issue in their press release.

The finanical press usually has a disclaimer at the end of their columns. Something like "Our columnist owns no stock or any other interest in the company". That's nice, but it would be more informative to the reader if the disclaimer said "Our columinist has done no research for this column beyond reading the press releases of the company".

Plus if BPL does "threaten" to enter a market, the DSL and cable guys will drop their prices to keep from losing market share. So I bet they are monitoring this situation closely. The latter already know it is price that keeps some people from switching from dial-up. Just look at some of the recent ads on TV for their promotions. Cable had been advertising a $29.99 introductory offer and now they are offering a $19.99 introductory offer. DSL and cable know that they have to get close to dial up prices to get the customers.

I suppose he was, but I'm thinking of the all the religious broadcasters
who've set up shop on the SW bands in the last 20 years or so. They have
demonstrated a measure of political clout in that the old rules against

domestic SW broadcasting are now freely ignored. These guys have a significant investment to protect, particularly those guys who buy another 100 kW transmitter every 18 months or so.

     You've hit on a key issue here -- interests will cry out
against "premature regulation" or promise to mitigate if regulation is
already in place. Then, when damage to others has been shown to exist,
they claim they've been led down the garden path by being allowed to

proceed in the first place. Next they complain about the "crushing burden" it would impose on them and their investors to mitigate damages as per the original contract. Standard tactis for running roughshod ofer the rights of others.

In the current political climate that public safety organizations should be able to invoke homeland security concerns to bolster their side of the debate -- inability to coordinate evacuations, etc.

Some of the broadcasters are pretty ambitious. WYFR bought several about 20 years ago. Then it was WWCR. WWRB already has five transmitters.

I haven't heard as much of WWRB since Alex Jones moved to WWCR, but I imagine Dave Frantz might have had something to say about BPL. This time last year, he was talking about HAARP causing all those tornadoes and the evils of Satan's World Wide Web.

I was wondering how many people have broadband access, so I googled this up:

"A new, national report by comScore Networks indicates broadband Internet
access is ready to overtake dial-up access as the top online subscription

service in major metro markets in the United States. "

""In the past several months, we've seen the U.S. online population reach 150 million people, and household broadband penetration cross the 33 percent threshold," said Russ Fradin, executive vice president of comScore Networks. "Now we've recorded another milestone, with broadband accounting for more than half of U.S. major market Internet connections.""

If the story is correct, half of the internet users have broadband access where it's widely available, and a third of the country has it. Roughly 50 million people in the US have broadband access.

http://www.ectnews.com/story/33108.html

The story doesn't mention dropping price as much of a driving force in the expansion of broadband, but I don't see how it can't be considered as the main reason. SBC here runs promotional offers with the first few months of DSL broadband for little more than the cost of dial up. Of course, the price goes up after the promotional period ends.

Anyway, there seems to be a wide interest in broadband, as long as it's offered at an attractive price.

Excuse me for butting into an interesting discussion. As the originator of this string heading, I just wanted to say that I hope no one loses sight of the original message that prompted my post.

That was the one from "yea right" who wrote in his message
news:pan.2004.06.05.07.04.03.720063@spam.spam...

"If you value radio, this may be the last and only chance to have your voice heard to stop BPL from destroying your hobby. The FCC has extended the comment period for BPL.

It is VERY simple to file a FCC comment. Click the link below and enter

03-104

in box #1 (proceeding number) and fill in the blanks. The simplest way to comment is to type your comment into the box on the bottom of the form.
>
> http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi "

Anyone who has not given the FCC their input, should (you too, Frank).

Hi. I let my license expire too.

Someone told me I could use my old ticket as proof that I passed the 5 wpm code test. Well, yeah, I did; but No, I can�t pass it now. I�d hate to show up and be asked to take the code test. I�d be humiliated. Can I really use my old ticket to be credited for the 5 wpm code test?

Is the forth edition close enough? The latest edition of Now You�re Talking is the fifth edition.

I'm a VE, and yes, you certainly can use your old, expired Technician's ticket to gain credit for Element 1 (Morse code).

You must bring the *original* license for credit, plus a photocopy to the test session. The examiners must verify that the original is genuine, was granted before 1991, and that you are *you* to give you the credit. They keep the photocopy of the license to forward to the VEC to ensure that you were formerly licensed at the Tech level.

At one of the test sessions attended (as a testee, not a VE), a gentleman brought in his orginal ticket from the mid-1950s. It was long ago expired, but since it was indeed an original, he was given credit for the code. He then took Element 2 and passed, so he was granted a Technician with HF pass.

If they give you any guff at the test session, point them to Reg 97.505 paragraph (9) which specifically addresses Element 1 credit for a Tech license granted prior to February 14.1991.

Sorry, I don't know what differences there are between the Fourth and Fifth editions of the Tech study guide, but I'm sure between that and taking the practice tests (repeatedly) on qrz.com, you should do fine.

Good luck!

It looks like the applicable paragraph is paragraph (5), an unexpired or expired novice license.

It is interesting that they don�t require 13 wpm on the code anymore.

Depends on what your old ticket was. Only the Novice and Tech Plus tickets give you credit for the 5wpm. Ironic as it seems, the general, advanced, or extra tickets do NOT give you credit for the 5wpm code.

As to whether the fourth edition is close enough, I don't know. I haven't checked to see if there was any new material added. The main thing though is that they change the questions even though much of the material is the same. So if you memorize questions and answers, you'll probably fail. If you learn the material, you have a good chance of passing. You can take practice tests online at www.eham.net and www.qrz.com. This will help you determine if you are ready and what material you may need to brush up on or learn that is new. Personally, the books are cheap enough and should be kept in you reference library so I recommend getting the latest edition of "Now You're Talking". I update my personal reference library with new licensing manuals every few years just to keep up to date even though I don't need to worry about testing.

Rhett - Welcome to amateur radio. Hope you will have fun with the hobby.

MFJ makes inexpensive equipment that's usually fine for getting started. So I would go to their website and look for a 10Amp DC power supply (sufficient for a 35 or 40 Watt output rig) and a 2-meter 3/8th wave vertical. If you buy an antenna made for 2 meters, you shouldn't need an antenna tuner. However, remember that a manufacturer such as MFJ must sell to you at their list price, or they make their distributors very unhappy. So, for best price - go to one of the distributors (e.g. R&L, Ham Radio, AES). Go to the distributor website, see what they show and then call them on their 1-800 number. Tell them what you want, and use the MFJ gear as a price reference. I know R&L will sell you the MFJ gear below list price, and not charge more for shipping than what it costs them. And they may have alternate suggestions; I've never caught R&L trying to over-sell anything. Any of the distributors will sell you the 50-ohm coax. Just figure out how much length you need. I like to use RG-8x, but RG-58 is a little cheaper and works fine for short lengths (under 50 ft on 2m). No need to buy the big RG-8 cable for what you describe. For getting started, you may want to order a fixed length (50-ft) roll of coax with the PL259 connectors already mounted on the ends.

I once lived near R&L in Ohio and like the store, so here in a more remote part of NC I do most of my ham purchases over the telephone. There is a local Radio Shack store here, but I feel I get much more bang-for-the buck (and better stuff) calling a ham distributor and waiting a few days for them to ship it to me.

73, Andy K4YKZ (in Novice days, KN4YKZ)

> girlfriend). We're in the process of putting our shack together.
>
> Anyway, to my question. We've picked out a transceiver kit that we're
> going to put together,

Unless you have had a fair amount of practice soldering, and have the
patience to do fine work, I'd stay clear of kits right now. Plenty of
used gear in good working condition (especially 2 meter FM mobiles)
for very little money to get you started.

 and we know we'll need to get an antenna, too,
> but we really don't know much beyond this.

Look in various Handbooks for simple antenna projects for VHF.
Remember the KISS principle.

 I'm guessing I'll need a
> power supply, since it seems most components are designed to hook into
> one.

There are many good quality 12V DC power supplies out there, just get
one big enough for your future needs. Astrons are popular but not
that rugged. Hamfests are a good source for these. And you can pick

up a surplus GE 35A power supply for about half the price of an equivalent Astron, and they are almost bullet-proof. Not pretty, but they work. Add your own metering and you're in business. And get a power distribution panel with multiple fuses for all your 12V needs, one fuse per item.

What about an antenna tuner? The last radio I owned was a CB
> radio, and I had an SWR meter for it, but when I needed to get the SWR
> down, I'd just physically adjust the antenna a little bit (there was a
> bolt I could use to raise and lower the antenna in its housing
> slightly). Is this not an option with amateur radio? Should I
> consider purchasing an antenna tuner?

Well, they are a definite must on HF frequencies, but most VHF work one can easily trim the antenna to match the coax impedance. A tuner is easy to build for 6 meters and 2, and would make a good first project for homebrew. Again check older Handbooks for a design, hamfests for parts.

Tuning a mobile antenna is just like as you described as a general rule.

>
> What other gear would be important in a starter setup?

Depends on what you want to do. If FM and repeaters is all you want, a handheld is about all you need. For simplex work over long distances, a good beam, rotator, and tower are a must, along with low loss coax, Belden 9913 at least. A power amplifier is nice, but you get more return for your buck putting them in the antenna system.

SSB operation is a good test of one's mettle, and patience. We got lots of tropo skip here in the Midwest, so 2 meter SSB can acheive amazing results. For 6 meters, Sporadic E is the most common, and modest power with a good beam will astound you. This is most sommon during the summer months, and sometimes in and around December.

I'd only buy what you need at first, and add to the shack as you need it. Don't be a spendthrift and buy toys you'll rarely if ever need or use. Don't forget there is satellite operations, moonbounce, and microwaves to challenge your mind as well. You've only made your first steps, just learn how to walk before you run.

I was wondering what the general relationship between frequency and
its ability to transmit through various materials is? For instance, 1GHz
and 1MHz obviously transmit differently through materials. I'm
curious as to what material properties are involved (i.e. dielectric
constant, density, etc?)

The main reason for this questions is I'm wondering how well 1+ GHz
(GPS) signals transmit through about 1.5 inches of expanded
polystyrene (styrofoam).

Thanks in advance for any insight!
Dave

```

Having been a recently retired Navy Radioman, (not IT), for a couple years, really got into the network thing. However haveing been offered a postion that now requires more of the 'ole RF skills than I can remember. To make a long story short, decided to go to one of the local ham shacks to pick up some texts to bone up on antennas, theory, connectivity, types, etc. One of the books that I picked is titled "Lew McCoy on Antennas". In one paragraph he explains that it is possible to double the increase the gain of a 7db three element Yagi monoband by doubling the size of the beam.

The example provided in the text describes a three element beam on a 14ft boom with 7db of gain. In order to increase the gain to 10db, you increase the number of elements to 6 and raise the boom to 28ft. The book further states that to increase it to 13db, you increast the boom to 56ft and increase the number of elements to 12. My question is what is the relationship between boom height and the number of elements in to db gain?

Thanks in advance!

```

I got some of it. The problem is not really his sending, or the morse,
the main problem I have is the horrible tone. It's hard to tell what
some of the letters are. Man, I'm glad I didn't have to operate in the
spark days...:/ But at the first, I believe he is sending to some
other amateur radio stations. IE: he starts with ? CQ, then something

cer ? ARS...I think the ARS means amateur radio stations, or whatever...Some parts I could copy fine..IE: One part is real plain for a few words..He says..."That is, he has made a ree????. Couldn't quite pick out what he made...Also, at one point, he seems to be talking about some guy in QST...Maybe thats the guy that made something???
I'll work on it more later...I can process the file, and maybe make it a little easier to copy. If I can get the tone decent, I should be able to copy more of it. I've worked guys on the air much worse than him...Like I say, for me, it's the tone, or should I say lack of it, rather than the morse, that makes it hard to copy. The morse itself seems quite readable to me..Or at least the letters I can actually pick out...With some time, I can probably get a good bit of it..
If there is anyone that can do it, it's probably me...:) I'm pretty good at crappy code buried in noise, and am in the 50-60 wpm bracket as far as normal copy...I'll update you all when I get some more of it down. Pretty interesting listening to an old boiled fart from nearly 100 years ago...1915 was the first year for QST. I think one of his topics concerned some guy in QST and something he built...It'd be a piece of cake if it wasn't raspy spark...Now I know what they are talking about when the old codgers raved about the "musical" tone of the Titanic's radio...I can see how it would be much easier to copy than the average rasp spark like the tape..MK

Unbelievable a My story
Dear Sir,
Please I' need Help because Im in Ghetto.
After fortyone years my life, former ignorance nothing about own parentage, first time cognition for own parentage and this owing character and feature positive, neredity parentage one of most historical character of Serbia. Considering that myself come to improbable argument cognition abut project of extermination Serbia also off eighten sentury, I pleasure my story to divide with publicity to be entiled to they know who and what is done last 200 years, since today and they have pretence to know rightly truth, and how are turn historical character and how adversity done to myself and my parentage this country and this nation.

Decade secrecy this nation, only this and my, after 5. Ocotober 2000, as normal citizen, uncompromising with injustice, last discerning chance for realization principal right, who is all of my life refuse, and I am unlock gate of evil, my insatiable hunger of right, on bizarre mode relate myself to cognition parentage of Obrenovic Royal dinasty of Serbia, and only of this my pedigree.

Fact that I am never can to receive replay; who is my ancestral. Fact is, trought my life like sign opserve me number 13. My father is born 1.3.1925, I am born 13.5.1962, cadastral number placing in my ownership is 1305/45, number of my house is 13, that is place where I am living, throug is first in beginning street. In community registry houses numbers in my houses numbers is enrol name of nameless person.
Oddity which does heppen to myself, present in many bizzare randomness and yet variant abnormal and oddity feature, and particulary, that because anything of my reference competance institution rezult obscure respond which bring theirs in criminal act and same of this explicitly evidence this.Every penal process who is I animate is pass in extremly unaccountble mode, and prosecutors ourself relate in, with explicitly data, on inquest like convictig. My family and myself brow of regional police court, Elektrodistribucija, Telekom and likevise. In unwonted mode with one letter with argument against organize criminal who is myself send (26.2.2003) late premier Dr. Zoran Djindjic, who is murder when my senior son is birthday, and after 100 years of murder last Obrenovic, 1.3.2003 myself do extrude smutty cash 20000 DM, organize criminal in Telekom what is showed on Beogradska hronika Belgrade cronicle - RTS, afterwards diector territory management Telekom Milan Zdavkovic is deprivation. I reference special prosecutor with own argument of mode how is murder premier, not reveive answer. Disregarding on my higt technical practice in sphere electronics (project), computer (program design and service), mobile phone etc., eminently approve patent crown "silver medal" with shape Nikola Tesla, and with participation in scientific programme RTS, existence my family and myself is continually control on reef hunger. Otherwise on my family and myself is in often perpetration experiment removal, but considering that I know how they observance removal, they further attempt is neutralize.

Every this unlikly doings relate myself to argument cognition that is

Kremansko prorocanstvo sect project holocaust Serbia for interest dinasty Karadjordjevic, church and afterwards UDB-e, and to currents days in every phase generation war. Because myself, my parentage who is decade edit on untruth mode and because nation, I must and sedire afore public expose true and identification, recognize, primary reason every badly feature who is doings this country.

Dear sir, considering that I own cululative material, and for fact that myself afore competent institution infirm, what demonstrative myself report ministry of repulica Serbia, special anpublic prosecutor V municipal court, becouse is eminently political specimen identified by myself, member of conspiracy I request to urgency for interview of detal amount rightly historical truth about Serbia in organ whom, if interested.

Dear, Sir, this story myself possibly warrant, unhoped interest for yourself organ, interest is above all is after 200 years raise onside truth, I hope yourself invite myself on interview and let my to expose irrefutable fact and argument on 300 strike page.

E.G. Argument how Elektrodistribucija (head electric hose in Serbia) perfidy steal nation in enormity mode, how Telekom (haed Communication house in Serbia) wash smutty money, how is individual, parapsiholoski operate raven safe community etc.

The easiest way to think of it is to think of the antenna as "capturing" the RF energy from the wave. If the antenna is twice as big, it captures twice as much of the energy. There may be many ideas and explanation as to just how it does this "capturing" , but this is the basic idea. This, of course, assumes that it is a well constructed antenna and it capturing all/most of the energy it is supposed to, for its size.

You can, to some extent, compare it to the large lens, or mirror in a telescope. The larger the mirror, the more light energy it gathers, thus the brighter the image. Double the AREA of the mirror and you capture twice the light energy.

The mirror/lens captures energy by directly intercepting it and directing it to the final eyeball. The Yagi, kinda' absorbs energy (or gets energy induced) from the wave as it travels along the beam's elements. So you need twise the "stuff" in the sky to get twice the energy out of the wave.

now come the Maxwell's Equations answers, etc...

Hello all... I currently own 2 UHF MTS2000's model # HO1SDD9PW1BN.   I am looking to trade 1 of these UHF units for a VHF version. Anyone willing to trade or trade me a VHF radio with at least 15 channels??

Let me know so that we can work something out.

Jeff

Well, it wasn't about cutting costs. Actually building a transceiver
together was part of the motivation for getting our tickets and
jumping into things. I have soldering experience already, so we're
hoping this will go fine.

If not, I did just buy a HT, too. ;)

Do you or can you or did you make a .wav file out of this?
There might be some processing CoolEdit could do that would clean the
noise, convert the tone, slow it down, compress the heck out of it, and
then use the beat detector to somehow clean the cadence.

Wow. That is counter intuitive, but yes, I see that now in
97.505. To get credit for an expired General or higher license
for element 1, you have to be within the grace period for
renewal.

Lucky for me I never upgraded. :-) Isn�t that awful! My best
interest were served by being a slacker.

Great websites! Thanks. I found that the ARRL website has the
question pool for all exams for FREE. I wonder how they can sell
it in book form when it�s available as a download? Oh well. I
bought the fifth edition of NYT (Now You�re Talking, not the New
York Times) just to read the material.

So long as you provide proof of that old Novice or Tech Plus ticket, it
wouldn't have mattered if you had upgraded.

Providing it in book form is more expensive that posting it on the Internet.
They need to recover that cost.

Amateur Radio Newsline™ Report 1400 June 11, 2004

The following is an advisory and not necessarily for air. Ladies and gentlemen, Amateur Radio Newslines' Support Fund Administrator,
Andy
Jarema, N6TCQ:

--

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator, getting caught up with our supporters. In the month of August of last year we heard from The Reading, PA Radio Club, W3BN; Joseph Bartzi, Jr., KC8DKF of Columbus, OH; The North Hills Radio Club in Sacramento, CA; monthly contributor William Walters, WA2IBM, of San Jose and monthly contributor Scott Hensley of the Area Communications Team, also in San Jose

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a federally chartered 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1400 with a release date of Friday, June 11 2004 follows in 5-4-3-2-1.

The following is a Q-S-T.

Australia to make big changes in its Amateur Radio service, Greece will welcome hams at the 2004 Summer Olympics and Amateur Radio Newsline celebrates 1400 weeks of service to the world-wide ham radio community. It all comes your way, right now!

(Billboard Cart Here)

**

RESTRUCTURING: BIG CHANGES DOWN-UNDER

Big changes are coming to ham radio down-under. This, as Australia announces some sweeping changes that are about to take place in that nations Amateur Radio service. Owen Duffy reports:

--

The ACA has released their report entitled "Outcomes of the Review of Amateur Service Regulation". The report contains the ACA's intended changes to the Amateur service following stakeholder response to the recent discussion paper entitled "A Review of Amateur Service Regulation."

The key changes are removal of the Morse qualification requirements for all grades of amateur radio license; introduction of a new entry level license (the Foundation License) along the lines of the UK Foundation License, although it will be adapted to suit Australian preferences.

A three tier licensing structure: Advanced, Standard, and Foundation; translation of Unrestricted, Limited and Intermediate licenses to Advanced; translation of Novice and Novice Limited licenses to Standard; a privileges package for the Standard License that is much greater than enjoyed by Novice Licenses today.

A generous privileges package for the Foundation License allows voice or Morse code at low power (10W PEP) using only unmodified commercial transmitting equipment on all of 80m, 40m, 15m, 10m, 2m, and most of 70cm.

Australian participation in CEPT Recommendation T/R 61-01 (reciprocal licensing) is in progress. The status-quo is essentially preserved in respect to higher operating power; interference and interference management built on current arrangements.

Apparatus Licensing as the vehicle for licensing Australian amateur stations (though stations licensed under CEPT Recommendation T/R 61-01 would be class licensed). State significance of callsigns remains.

This has been Owen Duffy for the CQVK project on Q-News Australia.

--

As we go to air, no effective date for these changes to take place has been announced by the Australian Communications Agency. (Q-News)

**

INTERNATIONAL: THE BIG DISPUTE

Two Asian Pacific nations are embroiled in a territorial dispute and Amateur Radio appears to be caught right in the middle. Q-News Graham Kemp, VK4BB, is in Brisbane with the details:

--

A centuries-old territorial dispute between Japan and South Korea is again escalating with the South Koreans placing a group of amateur radio operators on the rocky islets known in Korea as the Lonely Islands. To the Japanese they are the Bamboo Islands.

The radio station, licensed by South Korea, was seen as a provocation by the Japanese. Some amateur radio operators in JA are said to have interfered with the South Korean stations transmissions.

I'm Graham Kemp, VK4BB, of Q-News for the Amateur Radio Newsline.
--

Kemp says that hams around the world were surprised to hear about the dispute. This is because our hobby stresses development of technologic skill along with friendly international communications. (Q-News)

**

RESCUE RADIO: THE NEBRASKA TORNADO AFTERMATH

Back on this side of the Pacific Amateur Radio operators were on duty aiding tornado-stricken communities in Nebraska and elsewhere in the Midwest. Norm Seeley, KI7UP, picks up the story from here:

--

As we reported last week, a May 22nd tornado virtually destroyed most structures in the small town of Hallam, Nebraska. Hallam is located some 20 miles south of Lincoln and one death there was attributed to the storm.

During and after the tornado ham radio was an important part of the overall emergency service effort. The ARRL Letter quotes Nebraska Section Emergency Coordinator Reynolds Davis, K-zero-G-N-D, as saying that Lancaster County ARES and SKYWARN spotters were activated that evening in response to a report of an approaching front. Within a half-hour, W0NWS at the National Weather Service office was receiving tornado damage reports via the Lincoln Amateur Radio Club K0KKV repeater.

The storm severely damaged a high school in Norris, Nebraska, and plucked the tower supporting the K0RPT repeater's south region receiver from the ground. The tornado went on to demolish additional homes to the northeast. Its path of destruction finally ended south of the town of Bennet.

Once the SKYWARN Nets closed, the remainder of the K0RPT system was put into service to support Red Cross communications between the tornado scene, the chapter house and a shelter set up in a Lincoln high school for residents displaced by the storm. Two ARES nets were activated May 23rd to coordinate damage survey and assessment. They logged reports via K0EOC at the Lancaster County Emergency Operations Center.

For the Amateur Radio Newsline, Norm Seeley, KI7UP

--

Amateur Radio communications support continued for several days. (ARRL)

**

Break 1

More news after a break for you to identify your station. Cue the announcer, please:

"From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the K2SBD repeater serving Long Island. New York."

(5 sec pause here)

**

WITH NEWSLINE: SEND US YOUR ID - PLEASE

The station I-D you just heard was recorded a few weeks ago at the Dayton Hamvention. And it has lead us to an idea.

Would you like to I-D your own repeater or bulletin station here on Amateur Radio Newsline? Well here is how you can do it.

Simply record on a cassette tape the following sentence and include the call sign and location you want to honor.

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the "xxx" repeater serving "yyy zzz." The "xxx" is the call sign. The "yyy" and "zzz" are the city and state.

Then, take the tape and mail it to Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clarita, California, 91350. As time permits, we will select an audio I-D and include it in the newscast.

All tapes submitted become the property of the Amateur Radio Newsline and cannot be returned.

Again, the address to make yourself a part of this bulletin service is Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clarita, California, 91350. (ARNewsline(tm))

**

HAM RADIO IN SPACE: FIRST EXPEDITION 9 QSO A BIG SUCCESS

AMSAT reports that the first ARISS contact with the Expedition 9 crew on the ISS took place on Tuesday, May 25th. During his first-ever amateur radio contact, Astronaut Mike Fincke, KE5AIT, answered 18 questions asked by the students who gathered at the Erie Planetarium in Pennsylvania.

The contact used the facilities of telebridge station, VK5ZAI, in Australia to assure high quality space to ground communications. It was deemed very successful as the children applauded and thanked KE5AIT for taking the time to join them from space. We will have more ham radio space related news later on in this weeks newscast. (AMSAT, ARISS)

**

WORLDBEAT: HAM RADIO AND THE 2004 SUMMER OLYMPICS

If you are planning to attend the 2004 Summer Olympics in Greece, we have some good news for you. Foreign radio amateurs from CEPT countries or from countries with reciprocity can use the special prefix J42004 from August 1st to November 15th without any special license from Greek Authorities.

Not only that. Demetre Valaris, SV1UY, says all hams visiting Athens for the Olympics is more than welcome to give a shout on 145.425 MHz with a 88.5HZ access tone. Demetre says that this is so visitors can hook up with Greek hams and share hospitality.

What about visiting hams from non CEPT nations? They will have to contact Greek telecommunications regulators for special permission to operate. (Via E-Mail)

**

RADIO RESEARCH: MCRN TO TEST RADIATION ANGLES

The Marconi Radio Club of Newfoundland station VO1MRC will be conducting an antenna comparison experiment on the 19th and 20th of June and you are invited to take part. Amateur Radio Newsline's Bruce Tennant, K6PW, has more:

--

Each day during the experiment from 0000 to 2400 UTC station VO1MRC will operate a CW beacon on 5269.5 kilohertz. Its purpose will be to determine the relative performance of high and low radiation angles. The antenna in use will be identified by a code in each transmission.

VO1MRC will also be open briefly for 2 way contacts with stations authorized to transmit on 60 meters starting 0000 UTC each of these days and will operate simplex on 5260.5 kilohertz CW. Following this it will transmit on 5327.5 kilohertz upper sideband and receive 5346.5 kilohertz upper sideband and 3807.5 kilohertz on lower sideband.

The experiment was proposed by Marconi Radio Club of Newfoundland and is endorsed by Radio Amateurs of Canada. Its operated under an authorization issued by Industry Canada which is that nations telecommunicastions regulatory body.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

For further information, please check the Marconi Radio Club of Newfoundland web site. That U-R-L is http://www.ucs.mun.ca/~jcraig/5megex.html (RAC)

**

ENFORCEMENT: TO MUCH RF

The licensee of FM station KWNZ, located in Carson City, Nevada, has been fined $10,000 by the FCC. This, for creating ground-level radiation in excess of the permissible public exposure level at KWNZ's McClellan Peak transmitter site.

The CGC Communicator says that the various excuses offered by the licensee were not impressive. For example, KWNZ contended that there was no evidence whatsoever of public use of the particularized ten square foot area where the station exceeded the RFR permitted radiation limits.

According to the FCC, it is not necessary to establish actual public use of the particular unfenced and unmarked]area where excessive power density occurs. The regulatory agency says that public use of an area nearby is sufficient.

(DO NOT READ: More is on-line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1533A1.doc
(CGC)

**

ENFORCEMENT: AMATEUR RADIO ACTIONS

Now with more enforcement news here's the FCC's Daryl Duckworth, NN0W:

--

Audio report only. Hear it on this weeks newscast at

http://www.arnewsline.org
--

More on these issues as the FCC releases follow-up information. (FCC, RAIN)

**

BEST PRACTICES: EMERGENCY READINESS GUIDE FOR LOCAL MEDIA

The FCC's Media Security and Reliability Council has published a new booklet titled the "Readiness Guide for Local Media on How to Prepare for Emergencies." This colorful pamphlet is good for a quick overview of what the media should do in times of emergencies. Its available on the web in both Mocrosoft Word and PDF format. The PDF version is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-244522A1.pdf.   Download the following doc version at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-244391A1.doc. Finally, the generic website for the Media Security and Reliability Council is http://www.fcc.gov/MSRC/.   (CGC)

**

ON THE AIR: THE COLLINS COLLECTORS NETS

And if you own vintage ham gear, you might want to become a member of the Collins Collectors Association and join one of their monthly nets. The nets are held the first Wednesday of the month on 3.888 MHz beginning at 7:30 PM in the Eastern time zone and 8 PM in the Central, Mountain and Pacific time zones.

These nets draw hundreds of vintage stations from across the country and are anchored by a "tall ship" AM station in each time zone and you do not need to operate Collins gear to take part. For more information. just tune in. Comments go by e-mail to wa9vrh@mtco.com (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the

United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: LLOYD "SIG" SIGMON W6LQ - S.K.

A ham radio operator who developed a public warning scheme that eventually carried his name, has died. This, with word that 95 year old Lloyd Sigmon, W6LQ, became a silent key on Wednesday, June 2nd, following a long illness.

Known to his ham radio buddies as Sig, in 1955 W6LQ perfected a method that allowed the Los Angeles Police Department to issue emergency warnings over local radio stations. At the time Sigmon was an executive with radio station KMPC and wanted to boost station ratings by providing traffic information.

Then Los Angeles Police Chief William H. Parker permitted use of Sigmon's device but only on the condition that it be made available
to any radio station that wanted to use it. He also is dubbed the bulletins as SigAlerts in honor of W6LQ.

The first SigAlert was broadcast on Sept. 5, 1955. It was carried by six radio stations and urged medical personnel to respond to a train derailment outside Los Angeles Union Station. The California Highway Patrol later took over freeway traffic warnings from the Los Angeles Police Department and handles SigAlerts, which now are computerized.

Lloyd Sigmon, W6LQ, was born in 1909 in Stigler, Oklahoma. He was fascinated by electronics and received his first Amateur Radio license at age 14. He died at Green County Assisted Living Center in Bartlesville, Oklahoma, where he had been residing the past four years. (Published news stories)

**

RADIOS LEGACY: THE HISTORIC KGFJ 1230 KHZ TRANSMITTER SITE HAS BEEN SHUT DOWN

The CGC Communicator reports the passing of a different sort. This with the announcement that on May 24th a historic AM broadcast transmitting site was turned off after 80 years of service.

In 1924, radio station KGFJ started broadcasting from the Odd Fellows Lodge Building on Oak Street near downtown Los Angeles. In more recent years, the station call sign was changed its call letters to KYPA.

Shortly after 4 PM on May 24th, Marvin Collins, W6OQI, turned on the new 1230 kHz transmitter. Its signal is diplexed into a tower at the KBLA 1580 kHz transmitter site.

Collins says that the old KGFJ "flat top" antenna had been in continuous use by since 1924. He adds that the old antenna may well have been the last full-time use of a flat top antenna anywhere in the country.

Marv took photos of the old KGFJ site and the new diplexed setup at KBLA, visit Marvin's web page at http://earthsignals.com/Collins/ and scroll to "KGFJ 1230." You can write to Marv at KFIam640@aol.com

(CGC)

**

HAM RADIO IN SPACE: BIG LAUNCH DOLLARS RAISED AT DAYTON

AMSAT says that its Launch Fund campaign now has $93,0000 in it. This, thanks to donations received at the recent Dayton Hamvention including one anonymous donor who matched every dollar collected with another one.

AMSAT North America President Robin Haighton, VE3FRH, says that now is the time to make a final push to reach $110,000 goal. He adds four words that seem to come right out of the Mel Brooks musical the Producers. The four words are - "we can do it." And Haighton is confident that they will.

More about the fund and ham radio space exploration is on-line at www.amsat.org. (AMSAT-NA)

**

HAM RADIO IN SPACE: ECHO NEAR COMPLETION

And some more good news from on the ham radio satellite scene. It comes from Jim White, WD0E, who has been testing and performing final integration of the ECHO ham-sat.

White says that as far as he can tell the ECHO team is on track and the new satellite is looking good. He says that there are a few minor items have to be completed before the bird is sent to the Kazakhstan launch site. White says that he is confident that it will be 100% by the time it gets there for the launch. (AMSAT-NA)

**

WORLDBEAT: HFRADIO.NET TAKES LIGHTNING HIT

Due to a system failure caused by a recent lightning strike, the H-F-RADIO dot NET Canadian Amateur Radio Bulletin service has lost its database of subscribers. In order to rebuild it and for subscribers to continue receiving those weekly bulletins, hams across Canada are asked to send an e-mail to webmaster@hfradio.net with the word "subscribe" in the subject line. (RAC)

**

DX

IN DX, K8AQM, reports that his trip to Samoa will take place between July 7th to the 21st. While there he will operate as 5W0TR on 160 through 10 meters using CW, SSB, RTTY and PSK. Also, look for him as KH6BB from Hawaii July 5th and 6th and 22nd through he 24th. QSLs go via K-8-A-A as his Callbook address.

And members of the United Kingdoms Wrexham and District Amateur Radio Society will be on from the Isle of Man from September 1st to the 8th. Station location will be at the discontinued Coast Guard lookout tower at Scarlett Point. Activity will be on all High

Frequency bands plus 50 MHz, 70MHz, 144MHz and 432 MHz, at full UK power on CW, SSB, RTTY, PSK and SSTV. More information is on-line at www.gb4iom.co.uk (Various DX sources)

**

THAT FINAL ITEM: CELEBRATING NEWSCAST 1400

And finally this week its time for a bit of a celebration here at Amateur Radio Newsline. That's because this newscast marks 1,400 consecutive weeks that we have been bringing you news from the worlds of Amateur Radio and personal communications. With some thoughts on this milestone, here's our producer Bill Pasternak, WA6ITF:

--

If you get out your calculator and do the math, you will find that 1400 weeks comes out to be 26 point 923 years. Close enough in our book to say 27. And in ham radio news, I guess we can say that's a pretty long time.

Back when we still edited on tape I used to wonder how many splices that we made in a year. One day I sat down and figured out that there were about 30 in an average newscast. That was 120 a month or 1440 a year and an awful lot of Scotch splicing tape. Had we stayed on tape it would mean that we would have cut into a piece of audio tape 38,880 times as of today.

But we stopped putting the newscast together using tape almost 4 years ago. Now its done in the digital world using computers and programs like Goldwave and Cool Edit pro. Becoming part of the digital age early on is something we are kind of proud of. Being on your favorite repeater for the past 27 years and never missing a deadline is another.

As we enter year 27 and begin rolling on toward year 28, we pause and renew our simple pledge to you. The promise we made many years ago and which continues to guide our very being. Amateur Radio Newsline will be here as long as you want us and as long as you support us. We exist to serve you and we all consider it an honor to do so.

Speaking for all of the volunteers who make up the world-wide Amateur Radio Newsline team, I say "thank you." Thank you for

sharing your
lives with us through the magic of Amateur Radio. Thank you for caring about us through your ongoing support. Most of all, we thank you for being a part of what we like to call the Amateur Radio Newsline family.

To paraphrase a line from the show Chicago. "We simply could not do
it alone."

Again, we thank you.

I'm Bill Pasternak, WA6ITF.

Jim.

--

As one of the anchors who has been here almost from the start, I add my thank-you's as well.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our

website. That's in cyberspace at www.arnewsline.org. The cutoff for
nominations this year is midnight on June 30th.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim
Davis, W2JKD, saying 73 and we thank you for listening." Amateur
Radio Newsline(tm) is Copyright 2004. All rights reserved.

Due to a death in the family of the Engineer that was providing the test equipment, and RF expertise, we wont be able to offer radio testing this year at SeaPac. Baring some equally untimely event we will be there next year.

We also plan on providing testing service at many of the other major Ham Fests in the area through out the year.

Thank you.

Louis--

> If you will be attending the SeaPac Ham Convention at Seaside, Oregon this weekend be sure to stop by the Cascade Amateur Radio Society's booth and have your radio, or one you intend to buy tested. A complete test of all operating parameters will be performed, with results graphed, and printed out for your record.
>
> We will offer this service Saturday only, on the main floor flea market area.
>
> We have participated in radio testing at three other Ham Fests recently, with many happy and a few unhappy people after receiving the results. A number of dysfunctional radios were identified, others operating at less than specified levels, and a few were identified as operating well above the advertised specs. In all cases where a potential sale was in progress the results assisted the decision, and price setting process.

Looking for any kind of information about a kit constructed printed circuit board with the following info on it DAGE CM-334. very well made design. Circuit board mounts everything except power supply and is mounted using the select switch and the zero adjust. Kit is very well made excellent components. Has a older 3 digit readout in the upper left section of the board, the zero adjust is in the upper right, and just below it is the selection switch. Selection switch position are; OFF, mF, and uF.

Thanks!

Jim

The ARRL Letter
Vol. 23, No. 25
June 18, 2004
[The ARRL has weighed in on behalf of Iowa amateur and ARRL member Jim Spencer, W0SR, of Cedar Rapids, who has suffered severe broadband over power line (BPL) interference for more than two months. A formal complaint to FCC Enforcement Bureau Chief David H. Solomon calls on the Commission not only to order Alliant Energy's BPL field trial system to shut down but to fine the utility $10,000 for violating the Communications Act of 1934 and FCC Part 15 rules. Alleging "ongoing harmful and willful interference

to one or more licensed radio stations," the ARRL asked Solomon to intervene "on an emergency basis."]

http://www.uplc.utc.org/index.v3page?p=44489

http://www.uplc.utc.org/file_depot/0-10000000/0-10000/7966/folder/33324/UPLC%20Comments%205_3_2004.pdf

Power companies are in full denial! (Just saying it doesn't make it true.) If you believe what's being said by UPLC, I have some great land to sell you in Florida, and a wonderful bridge investment in New York. (When did the BPL interference spectrum drop to 1.7 MHz ??)

ak

- - - - - - - - - - - - - - - THE UPLC STORY - - - - - - - - - - - - - - -

SUMMARY

The UPLC generally supports the FCC's initiative to develop rules that will support the deployment of broadband over power line systems that will help achieve President Bush's goal of universal affordable broadband access by 2007.1 The President supports the development of technical standards for BPL towards that goal.2 Utilities and technology providers are poised to meet this ambitious goal and the UPLC appreciates the strong support of the FCC in its BPL proceedings.

The UPLC believes that the definition of Access BPL is potentially over-inclusive and should be slightly revised. The UPLC supports the proposal to retain the existing emission limits at the present time, recognizing that the FCC is proceeding cautiously, even though it has found that the interference potential from BPL is low.

Before the Federal Communications Commission
Washington, D.C. 20554
In the Matter of Carrier Current Systems, including Broadband over Power Line Systems
ET Docket No. 03-104
ET Docket No. 04-37
Amendment of Part 15 regarding new requirements and measurement guidelines for Access Broadband over Power Lines Systems
COMMENTS OF THE UNITED POWER LINE COUNCIL

Pursuant to Section 1.415 of the Federal Communications Commission ("FCC") Rules, the United Power Line Council ("UPLC") hereby submits its comments in response to the Notice of Proposed Rule Making in the above referenced proceeding.3 The UPLC supports the proposal to retain the existing emission limits at this time, and suggests only slight changes to the operational limits proposed for Access BPL systems, as well as the proposed definition of Access BPL. Finally, the UPLC supports the proposed measurement guidelines, which will produce consistent and repeatable results that demonstrate compliance with the Part 15 rules. The UPLC heartily thanks the FCC for its support in developing these rules, which strike a very conservative and pragmatic.

. . . .

The UPLC is dismayed by the misinformation accepted as gospel by opponents of Access BPL systems. Despite apocalyptic predictions that "BPL is a Pandora's box of unprecedented proportions", the UPLC agrees with the FCC that Access BPL devices will not cause the power lines to "act as countless miles of transmission lines all radiating RF energy along their full length."6 These opponents have produced no scientific evidence to show otherwise, and all the measurements in the field contradict their abstract calculations. The industry continues to test and to address these concerns with licensees in areas where systems have been deployed, but there needs to be a rule of reason when it comes to allegations of BPL interference, and the UPLC applauds the FCC for making that message clear in this proceeding.

Definition of Access BPL

The proposed definition of Access BPL systems should be narrowly tailored to apply only to systems used to provide broadband access to the customer premises. As such, the UPLC recommends this slightly revised version of the FCC's language in the NPRM: Access Broadband over power line (Access BPL): A carrier current system that transmits high frequency (>1.7 MHz) radio frequency energy by conduction over electric power lines owned, operated, or controlled by an electric service provider for the purpose of delivering broadband data services. The electric power lines may be aerial or underground, but do not include power lines within the customer premises or in riser conduit within buildings. Access BPL does not include power line carrier systems, as defined in Section 15.113 of the Commission's rules.

. . . .

Hello everyone:

I have a near brand new 440 MHz repeater. This is the Motorola GR-1225 without duplexer. In addition I have the Motorola RSS version 3.2 used to program this units as well the M-1225 and the P-1225.

This is a Windows based software.

Repeater was used on my site and now I have replaced with a more expensive one.
Works great. I am giving this and the software for a Icom 706 MKIIG

If you are interested please email directly at:
wvantonelli@comcast.net

Or send your phone number and I will call you (Within the Continental US, Puerto Rico, US virgin island, Hawaii and Alaska only, please)

Thanks

Will, W7JM

If you are in the US, the QSL bureau is administered by the ARRL. To receive cards, you do NOT have to be a member but to send cards through the bureau you do have to belong to the ARRL. Information on how to use the incoming and outgoing bureaus is on the ARRL web site, www.arrl.org

The resources listed in another reply are also good.

I am glad that my local electric provider is a municipal provider,
and not (yet) considering broadband (RFI) over power lines!
Besides, we already have 3 providers, Mediacom, which I am on,
(cable modem) Interlink LC (WiFi) and Iowa Telecom (DSL)

Also, I am glad that Mediacom no longer uses the two meter band
for tv signals. I used to get RFI complaints, which I referred to
the cable company, which was then TCI. I told my neighbors that
RFI on a supposedly closed circuit system was not my fault and
not my problem to fix! I just hope that nothing creeps up with UHF/222
which they do use.

I do notice in the CQ articles that one outfit uses WiFi for the last
hundred feet or so. Why not use cable to connect to such "extractors"?
That would eliminate the RFI problem.

BPL is just another word for RFI
and Commissioner Powell is all for it.

Bush appointed Powell, let's boot Bush,
replace him with anyone who will work
for the people,
not the rich corporations!

In searching Google for articles and postings
about BPL, I found an article from a website
no longer functioning in Google's archives:

http://k0bkl.org/bpl2.htm

I copied it and posted it above on my site.

"The limit for an unintentional emitter on HF is 30 uV/m at 30 meters from the source," he said. "If you take a dipole cut for 3.5 MHz and put it in a 30 uV/m field, you'll have a noise reading of S9 plus 16 dB at your transceiver."

The FCC has extended the comment period for BPL. If you value radio, this may be the last and only chance to have your voice heard to stop BPL from destroying your hobby. The FCC has extended the comment period for BPL.

It is VERY simple to file a FCC comment. Click the link below and enter

    04-37

in box #1 (proceeding number) and fill in the blanks. The simplest way to comment is to type your comment into the box on the bottom of the form. Sample comment below.

http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi

If you see fit, please post this to as many groups as possible because numbers count! Please mention this in your nets!

More info at http://www.arrl.org/news/stories/2004/02/12/5/?nc=1

If you can't think of any thing to type or wish to make this as painless as possible, you can cut-n-paste the comment I typed below.

/******************************/

In Writing, I wish to persuade the FCC from allowing BPL to be implemented. The destruction or at the least, deterioration of the shortwave bands is not only a violation of ITU laws that protect international broadcasters from interference and jamming, it will be destroying many people's life hobby. Amateur radio will be reduced to users with high-power amplifiers and large antennas. Emergency communications will be hindered to levels directly responsible for the loss of life. Also, this will hinder military HF comms reducing national security

There are many technologies that make BPL unnecessary. BPL will never be able to carry the high bandwidth demands for mass distribution of video much less the up-and-coming HDTV.

Thank You!

John - I wish RoadRunner had been so kind when my 5 watts to a GP on 2 meters got into one of their premium movie channels (in Ohio days) and got relayed all around. They told the neighbors it was my fault - until I got the FCC involved. To my great surprise and pleasure, the FCC told Warner to get THEIR problem fixed and six people showed up at my door one Saturday morning. Five supervisors, and a technician who searched their lines for the leaks. (Previously, a customer service woman at Warner had told me the problem was that my antenna was leaking; I tried to explain to her that antennas are designed to "leak"! HI) But with the FCC backing BPL at high administrative levels, we are on a rough road getting help with the BPL problem. It's politics vs. common sense, and politics usually wins.

I have up for trade an Icom 746 Pro. I would like to trade it for a
Yaesu 736R which has the 50 mhz and 220 mhz band modules added in. Or I
would consider a stock 736R plus some $$. Please email me and let me
know what you have!

Don't blame Bush for this. The internet is big buzz word today and any technology that promotes it use will be hyped up to be the best thing since slice bread. The same thing would have happened with Gore in office (just Gore would have claimed he invented it). Unfortunately there are very few people that understand the interference potential of this technology. The only thing that will make BPL go away will be if the utility companies don't get a high enough return on their investment coupled with a large number of customer complaints about poor performance and reliability.

Personally I think we will see a large number of BPL systems show up in densely populated areas as utilities get snookered by BPL vendors. You won't see it in rural areas because it will be too cost prohibitive to install and operate. No one will remember that one of the primary "benefits" in selling BPL was cheap implementation to customers in the sparse farm lands. The systems will be less reliable than DSL or cable modems. Utilities will find they will not get the return on investment that the BPL peddlers are hyping today. All you then need is another technology such as wide area wireless and BPL is dead.

The important thing is to keep complaining if you are getting BPL QRM. Become the utility company's worst nightmare with respect to sending letters and making phone calls to upper management about interference. Also push complaints to local TV and media. Keep firing letters off to the FCC on their lack of enforcement of Part 15 interference issues. A few letters to you congressman won't hurt.

You will see the lawyers try to re-define interference. It has already happened in one trial area. Make sure you point that out to the media and others when you make statement. Something to the effect of: "When the lawyers have to do an engineer's job by redefining interference then it is obvious that you have a flawed technology".

The other side of the coin is that if BPL is put into service, and Amateur transmissions cause harmful interference to millions of BPL users, that may put an end to the HF bands.

I have a question in regards to the theory of ATV.

If I were to run a video signal straight into, say, a 70cm transmitter (staying within the linear range of the transmitter's input, i.e. not clipping) and had a receiver that had a video out / TV connected to the reciever's output (and could adjust the amplitude of the output signal), would that work?

Or do most "standard" (audio) transmitters/receivers have limitations about the maximum frequency they can modulate/de-modulate? It seems to me that the latter would be the only reason that ATV equipment would be nessesary. Or is there some other reason this scenario would not work?

On a side note, what's the lowest carrier frequency ATV can operate on before the video signal degrades or begins aliasing?

Thanks in advance for any information!
Dave

Anybody know where this IC 706 MkIIG control program is on the web? I stumbled across it, downloaded it, and wanted to refer someone to it, but I don't have a URL and it doesn't percolate in a search and I usually get my man.

It has the Excel VB serial I/O module I was curious about for another reason. I played with it on the radio this weekend after breadboarding an ICOM/RS232 converter. It's a pretty neat spreadsheet--simple, but effective.

I have been a ham for four years now (since 2000) and I have an interesting problem.

My dad and I know the captain of a ship in Maine that runs ecology-oriented passenger cruises on the Maine coast and possibly farther up into Canada. He has asked me about developing a journal system to allow passengers to create online journals with pictures from the trip and will update them each night.

The problem I ran into when selecting all the parts of the system is the wireless connectivity. Cell phone service is unavailable in most of the areas the ship will be in, regular packet radio is far too slow for huge image uploads, and satellite phone service is prohibitively expensive.

So I'd like to ask for any suggestions about how to go about this. Are
there any land-based systems with long enough range and fast enoguh
speed for this? Does anyone know of a cheap and/or unlimited satellite
data provider?

Thanks,

Tom, KB1EVZ

I just submitted the FCC comment below (in case it provides
any useful ideas to other potential comment submitters).
I'm planning to follow up with letters or emails to my
congressional and senate representatives, per the ARRL
pages.

"This comment addresses the proposed deployment of BPL
(Broadband over Power Line) systems.

As a career radio frequency design engineer, it is obvious
to me that widespread BPL deployment would cause massive
degradation of most licensed radio services now operating in
the HF (High Frequency) spectrum-and some services would
be completely destroyed in the U.S.A.

This expectation follows directly from the fact that power
lines at HF frequencies are poor transmission lines, but are
quite efficient antennas. BPL lines will therefore radiate massive interference levels (by HF standards), and will themselves
be vulnerable to interference from licensed HF transmitters.
I am confident that my expectation in this matter is basically
the same as any other qualified engineer who considers BPL
objectively.

There is abundant evidence of the expected interference
problems in BPL field trials around the world. And there
are no examples that I know of where BPL is successfully
coexisting with licensed, co-located HF radio services.
For these reasons, BPL has already been rejected by a number
of "HF aware" countries.

The HF radio spectrum is an extremely valuable natural resource
with the unique ability to provide direct, world-wide wireless
communication. It would be highly irresponsible to allow the
destruction of this unique resource simply to provide a redundant
and probably unreliable option for internet connections.

I urge the FCC to do the following:

(1) Provide rigorous protection for the licensed radio
    services now operating in the HF radio spectrum
    from unlicensed emitters like BPL-both through
    appropriate rules and through vigorous enforcement.

(2) Insist on thorough, objective, and successful field
    trials-designed to scrutinize interference potential-
    BEFORE allowing the widespread deployment of any BPL
    system.

Sincerely,

<signed>"

GO FOR IT, and good luck!!!

I am chasing up some accessories for a Kenwood TM-741a, I'm after the DTMF Microphone (MC-45DM) and the 6m Module (UT-50S), the 6m module is also used in other multiband models. I am happy to buy accessories that may need a bit of repair....
Thanks to all that have helped me recently in my hunt for parts :-)

Hi, how about the Win-Link system, you can check it out on the internet as to what it can and cannot do.
Seems to me that pactor 11 is quite fast and maybe could be just what you are looking for. It is accessible i do believe from the internet also, if not on HF direct. Just a though that might help. Maybe get a hold of one of the sysop of the system and see what they have to say about it. I know that the win-link system does work very nice for ships at sea or anywheres else for that matter.
good luck in you endavor.

Packet radio is part of the amateur bands. This seems close to something commercial, which would not be acceptable on amateur allocations. You should get some legal advice or an opinion from the ARRL as to whether this usage is OK. As you say, people used to DSL or Broadband are going to have trouble with 1200 baud.

One option is to select certain points where there is cell service, and save up everything for a burst transmission.

Given the costs of setting up a satellite system, why or how could there be cheap or unlimited service? You possible could arrange with the provider for off-peak service to lower costs, again saving up a number of transmissions.

Least expensive might be to burn CDs, and have a small boat at each harbor come out to meet you, bring the disk to land, and upload it through the land-based Internet.

Coastal Maine has better phone and Internet service than you might think. A big reason for that has been located in Freeport for about 90 years.

Happy trails,

Hi

I am looking at a newer rig for both back up rig and or primary rig. I see a lot of Kenwoods TS 430, 440, and a few others. Anyone have any comments on these rigs? I believe the difference between them is that one requires the power supply? Is the 440's power supply within it?
Also are there analog rigs or digital in regards to using the computer interfaced with some of today's ham software?
Also, I have an old Drake TR-7, and although the cinch plugs look similar, what are the chances that the power supply will simply plug and play?
Any comments on these rigs? Worth the 300 or 400 they are going for? Anyone know of a good site that does sell something used, good condition?
Thanks
Bob

If you are an ARRL member, check out their reviews and analysis at
www.arrl.org
Their reviews go back quite aways and definitely include things far older
than the TS-430 and TS-440. In addition, their reviews include actual
measurements versus specifications.

The eham reviews are ok but do not include measurements (most hams aren't
equipped to do them) and the eham reviews are often skewed by the fact that
those who have had problems are more likely to post than those who have no
problems. So there tends to be a bias towards the negative.

I was wondering what's an accurate estimate for scanner sensitivity? I've got a Uniden BC180, and the owner's manual doesn't list that information. I was wondering what a good value would be to use in order to do some path loss calculations. I've heard 1.0 uv is a good conservative estimate. Is this too low?

As a second question, what's the approximate margin needed to make out audio? I've heard for data 20dB margin has a link reliability of 99.9%, and 30dB margin yields 99.99%. I imagine to make out audio without too much difficulty, it'd be much less.

Thanks in advance for any insight!
Dave

Yep, and that would suggest that there would be almost a half million HF
operators who were switched from strong supporters of FCC regulation and
enforcement into unlicensed and unregulated pirate operators with no good
reason for restraint or good public relations. Remember what happened when
the CBers found out that the FCC had no jurisdiction if they never bothered
to get a license? Soon after, no licenses needed. (Or was that just because
when Lady Bird got here new CB for Christmas from LBJ, she publically went
on the air as "First Lady" with no license?)

Hey there :)
Name here is Sean and the call is Kd4Adv.

I am having trouble with my Yaesu mobile mic
The rig is a 2400H Mobile and the mic is an MH-27 model.

I bought the radio at the R.A.T.S. Frostfest in Richmond, VA this year.
(I live in Amelia, VA)

I love the radio, though when I key up and ID on a simplex frequency with another radio on the same frequency, I can hardly hear my audio. I can't find a pot for the mic either inside the mic or the radio. The radio has 8 pins (RJ-45/modular) but only 7 pins are connected because one of the pins is for receive audio through the mic.

All functions on the mic DO work.
DTMF
Keypad lamp
PTT
Up/Down
and the Lock function.

Right now I have an off-brand mic that I found to use until this problem is solved.

Who else has encountered this, or, is able to advise me on troubleshooting?

(If it comes down to it, I'll have break-even to buy a replacement mic.)

Tnx,
de
Kd4Adv :)

The G4FON software is free and follows the principles laid out in "The Art & Skill of Radiotelegraphy". The book is also free on the internet. This is an excellent book and you should read it if you can carve out the time.

For the software
http://www.g4fon.co.uk/

For the book.
http://www.qsl.net/n9bor/n0hff.htm

If you are studying to pass the code test, practice 30 minutes per day, preferably broken into 2 or more shorter sessions for a couple of months and you should be in good shape. Set the character speed at 15wpm, word speed at 5wpm, and tone at 750 Hz.

If you are simply trying to improve your speed, set the character speed at your target, the word speed at whatever is comfortable, and the tone to match the radio that you most commonly use. Then gradually increase the word speed as you improve.

David:

If you were transmitting on 70cm band, with your atv baseband as the input, you still need to keep the deviation down to reasonable limits. We (as amateurs) don't have the luxury of a 6mhz wide channel to send our video signals, hence the need to limit bandwidth of the transmitted signal through the use of slower scan, smaller screen sizes, data compression, or other means. Otherwise, we would fill the available (allocated) spectrum with relatively few signals.

Most transceivers have reasonable bandwidth limits to maximize the use of the available spectrum we have allocated. Smaller (narrower) bandwidth means more concurrent signals can be accommodated in the same restricted spectrum.

Technically, the lowest frequency you could operate on would be the lowest one that has sufficient bandwidth for the signal you want to transmit. Sure, you should be at least twice the baseband frequency (signal bandwidth) for all practical use, but it's _possible_ to transmit a USB signal with a 1mhz frequency and a 5mhz bandwidth, it's just not available in current radio equipment, nor is there anywhere near the allocated spectrum available for such a stunt. I can think of some very interesting filter designs for such a requirement, and it wouldn't be easy if there were any real selectivity involved... For things as they are today, look for a band with enough bandwidth, and see what's there now... 'Betcha it'll be pretty narrow, even in the vhf and above ranges, just because there aren't any large untapped chunks of the RF spectrum available for this sort of thing... The standard ATV signal could be put nearly anywhere there is allocated spectrum, as long as everyone else plays along...

In theory, you could transmit a full bandwidth, broadcast quality analog signal on 70cm, if the filters of the transmitter and receiver were wide enough to handle the signal, and assuming you kept the amplitude of the input signal down to reasonable levels, however, there wouldn't be anyone else to listen to/watch your signal, because their equipment wouldn't be able to handle the wide bandwidth needed. Of course, you'd also bring down the wrath of other hams in your signal area, for hogging all of the bandwidth.... This is not unlike the current religious wars underway between "normal" hams and the "high fidelity" ssb group. The HiFi group thinks it's just fine to transmit a wide bandwidth signal in the interests of what they think is "broadcast quality" ssb signal, despite the long standing charter to use minimum bandwidth, minimum interference with adjacent signals on our ham bands. Typically, it's not unusual for big gun stations to operate as little as 3khz apart using normal bandwidth signals. The HiFi guys think nothing of using 6khz or even 9kz for a single signal, and can't seem to get why it pisses off a lot of other guys to no end. [sigh] Such is the issue of religious wars anyway, I guess.

Suffice to say, you _could_ do what you described, but you _wouldn't_want_to_ because nobody would want to play radio with you anymore.

Where I live, (if there weren't laws/regulations against it) it probably wouldn't make all that much difference on 70cm, as there isn't a bunch of traffic on 70cm anyway, and we're about 2400 miles from nearly everyone else, being on the biggest rock in the middle of the biggest ocean... (Living in Hawaii does have a few perks..), the least of which is low interference on many of the ham bands, particularly the vhf/uhf spectrum. Of course, there definitely is a much smaller pool of locals to talk to on vhf/uhf here, as we're spread out on several islands over a range of a couple hundred miles.

Good Luck!
--Rick

David Harper wrote:

> I have a question in regards to the theory of ATV.
>
> If I were to run a video signal straight into, say, a 70cm transmitter (staying within the linear range of the transmitter's input, i.e. not clipping) and had a receiver that had a video out / TV connected to the reciever's output (and could adjust the amplitude of the output signal), would that work?
>
> Or do most "standard" (audio) transmitters/receivers have limitations about the maximum frequency they can modulate/de-modulate? It seems to me that the latter would be the only reason that ATV equipment would be nessesary. Or is there some other reason this scenario would not work?
>
> On a side note, what's the lowest carrier frequency ATV can operate on before the video signal degrades or begins aliasing?

Amateur Radio Newsline™ Report 1401 June 18, 2004

Now, Amateur Radio Newsline report number 1401 with a release date of Friday, June 18 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new ham-sat is made ready for launch and the B-P-L struggle continues. Find out the details on Amateur Radio Newsline report number 1401 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: ECHO PREPARED FOR LAUNCH

The soon to be launched ECHO ham radio satellite has arrived safely at the launch complex in Russia and is being made ready for launch. This, according to Chuck Green, N0ADI, who is traveling with the bird to the launch facility. Bill Pasternak, WA6ITF, is here with more:

--

According to Green, once he and the team arrived at the launch site, the satellite shipping containers were opened and placed in the clean room. ECHO was taken out of it's shipping case and set up for completion. The bottom antennas were then installed.. So was the bottom solar panel, magnets, and corner reflectors.

ECHO was then powered on and the team successfully communicated with it over a hard wire connection from a computer. The four two meter receivers and the two 70 cm transmitters were all successfully tested. And that's good news for everyone waiting for the new hamsat to take its ride into space.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in Los Angeles.

--

Currently the planned launch period for ECHO is four weeks beginning June 28th. Once in orbit the command teams will be working together to assure everything is working OK and get ECHO into its initial 'normal' modes as quickly as possible. After that it will be open to the users in the ham radio community. (AMSAT)

**

THE BPL FIGHT: AN UPDATE ON WHAT'S HAPPENING IN THE USA

The fight to keep Broadband Over Powerlines from going nationwide continues. Amateur Radio Newsline's Mark Abramowicz, NT3V, is here with the latest:

--

With summer now here, expect the Broadband over Power Line Internet access issue to heat up - especially as more people get a chance to look over the latest filing from the National Telecommunications and Information Administration.

The federal agency, which advises the White House on telecommunications policies and oversees radio spectrum used by government agencies, weighed in with more BPL comments in a June 4 filing with the Federal Communications Commission.

And the American Radio Relay League and others who've analyzed the comments say it's clear the political considerations are overshadowing the engineering data which raises many questions about the viability of BPL.

In its filing with the FCC, the N-T-I-A's policy makers now call BPL a win-win situation for all and make what some call an outlandish claim - that deployment of the technology could actually lead to reduction, that's right, reduction of power line noise.

Now, the engineering types who've been studying the BPL and doing all kinds of test measurements are really scratching their heads trying to make sense out of that. The N-T-I-A filing also contains this comforting assertion for BPL opponents. It says that the current power line system is responsible for even greater local interference risks than what BPL would bring.

And, it says, B-P-L operators would implement procedures to eliminate any harmful interference.

The stack of complaints about BPL test sites and assertions by a lawyer representing one of the large utilities testing the technology might lead some to question that reassurance.

A source tells Amateur Radio Newsline the FCC has failed to "properly direct" BPL complaints to the appropriate FCC regulatory office for action. And, the source says, commissioners questioned about that haven't offered any explanation.

And a lawyer who has commented in writing to the FCC about some of the BPL complaints his utility company received claimed there was no basis for them, essentially saying the amateur radio operators making them don't know what they're talking about.

One thing the NTIA did suggest in its filing is the exclusion of certain bands and frequencies in specific geographical areas to protect critical government systems.

Does that suggest an agency confident BPL won't be an interference source?

The American Radio Relay League and others who've been vocal in this fight suggest otherwise.

They say BPL is far from a done deal and they're hopeful that the FCC's extension of reply comments to June 22 will net some helpful information. And, they say, they're not giving up or going away quietly.

In the meantime, there is a sense BPL is on a fast-track at the FCC where the majority of the commissioners view it as an engine to help stimulate the economy.

Could the FCC act on the BPL issue before the November election?

Anything is possible. And some close to the BPL debate say if the Bush administration believes it will generate a much-need bump in the public opinions polls or at the ballot box...well, you get the idea.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Mark will continue to monitor the B-P-L situation and report back in future Amateur Radio Newsline reports. (ARRL, CQ, Repeater Journal, Published news reports, others)

**

THE BPL FIGHT: AUSTRALIA REACTS TO THE BPL CHALLENGE

The United States is not the only place planning to introduce this controversial Internet access technology. Proposals for Power Line Communications or Broadband over Power Lines in Australia have become a concern many spectrum users down-under. This includes the Wireless Institute of Australia which is that nations Amateur Radio national society. From Brisbane, Q-News Graham Kemp, VK4BB, reports:

--

WIA President, Michael Owen, VK3KI has said that the WIA's position in relation to B-P-L is that it supports increasing broadband access and broadband competitiveness in Australia, but in a way that does not cause interference to legitimate users of the High Frequency spectrum. The WIA supports the development by the ACA of policies for BPL that protect existing users.

The WIA believes that one of the problems associated with B-P-L is that trials on a limited basis are not good indicators, and that the full effects of a problematic technology will not be seen with such trials. The WIA considers that B-P-L will not really serve the community's long run needs because of its limited bandwidth. A deep fibber network is to be preferred to using long runs of power lines.

The WIA has appointed a team to deal with this issue. WIA President has appointed Phil Wait, VK2DKN the director responsible for developing and advocating the WIA's position in relation to BPL. He has asked Owen Duffy, VK1OD Barry White, VK2AAB and David Wardlaw, VK3ADW to assist Phil, as the WIA's BPL Team.

--

A report on a recent small trial of B-P-L in the city of Hobart to some 4 houses and 2 floors of one building is on the WIA website. (Q-News)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the VE9BSQ repeater serving St. John, New Brunswick, Canada.

(5 sec pause here)

**

RADIO RULES: COMMISSION ADOPTS SPECTRUM SHARING PLAN FOR L AND S BAND

The Federal Communications Commission adopted a spectrum sharing plan for low earth orbit satellite systems in the 1.6 GHz and 2.4 GHz bands. The so-called Big Leo birds. And here's how it will work

In the 1.6 GHz or "L-band," mobile-satellite service
operators with
satellite systems that utilize code division multiple access and time division multiple access technologies will share 3.1 megahertz of spectrum at 1618.25 to 1621.35 MHz. At "S-band," the
Commission
allocated the 2495 to 2500 MHz band to fixed and mobile except

aeronautical mobile services, in order to provide additional spectrum and to accommodate the relocation of Multipoint Distribution Service channels 1 and 2.

The commission says that its new spectrum sharing plan will further the agency's goal of efficient frequency utilization by increasing the number of providers offering services to consumers over the same spectrum. It will promote the deployment of more innovative services to consumers. (FCC)

**

ENFORCEMENT: COUNTY HAS DONE NOTHING WRONG

The FCC says that a complaint that a county is using ham radio for its routine business is without merit. The agency's Daryl Duckworth, NN0W, is here with more:

--

Duckworth: "A complaint concerning Bell County Communications Center and club license W5BEC was dismissed. There is no showing that this station is operated by anyone other than amateurs, nor is there a showing that it is there a showing that it is used or intended to be used for routine county business."

--

W5BEC is the club station license issued to the Bell County Emergency Operations Center in Belton, Texas. Its also the call sign of a wide area two meter repeater that covers much of central Texas. (FCC, RAIN)

**

ENFORCEMENT: STAY OFF 10 METERS

Meantime, the FCC's crackdown on 10 meter unlicensed intruders continues. This time the agency acts in a New Jersey case. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: Auto Elite Transportation of Morristown, New Jersey, has been sent a warning notice about a vehicle of theirs; truck number 2113, as being the source of unlicensed radio transmissions on 28.085 Mhz."

--

Auto Elite was warned that continued unlicensed operation of radio transmitting equipment without is a violation of Section 301 of the Communications Act. That it could subject the operator to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment. Monetary forfeitures for this kind of violation normally ranges from $7,500 to $10,000. (FCC, RAIN)

**

ENFORCEMENT: SAN DIEGO'S 96.9 MHZ PIRATE REACTIVATES

According to a news bulletin from Chris Carmichael appearing in the CGC Communicator, San Diego's 96.9 MHz pirate is back on the air. Chris says that there is no news on the location of the transmitter, but he believes that will only take the Commission a short time to figure out. (CGC)

**

ENFORCEMENT: SPAMMER GOES TO JAIL

A New York state man who sent out millions of "spam" e-mails has been sentenced to three and a half to seven years in prison. This according to a May 27th news release from that states Attorney General's office which said that Howard Carmack, known as the "Buffalo Spammer," received the maximum sentence for 14 counts of identity theft and forgery.

A spokesman for New York Attorney General Eliot Spitzer said that Carmack sent out hundreds of millions of bulk e-mail messages. That he flooded inboxes and saddled Internet providers with millions of dollars in costs. But it was his use of stolen identities and forged addresses that caused action by state prosecutors. New York has no state laws specifically dealing with spam. Carmack was found guilty of violating state forgery and identity-theft laws in April.

Internet provider EarthLink Inc. won a $16.5 million judgment against Carmack last year, and EarthLink officials testified in the criminal trial as well. (Published news reports)

**

EMERGING TECHNOLOGY: EARTHLINK VS. PHISHERS

Meantime, EarthLink claims that it has developed a program to fight phony websites like this,. The sites, called phishers are those designed to deceive e-mail users into providing personal information such as passwords and credit card or Social Security numbers.

Phisher sites pronounced "fishers" but with a leading "p" are called that because they "fish" for personal information that can be used in identity theft. They work by telling an Internet user via e-mail that there is a problem with the service-provider account and providing directions to a Web site for clarification. The link takes the user to a hoax Web site that may be a perfect copy of a real page used by Earthlink, eBay or another legitimate business. That is where the user is deceived into providing personal information.

EarthLink's anti-phisher program will rely on a list of known fraudulent sites. When a subscriber responds to the e-mail message, he will be linked instead to a special Web page that warns the e-mail is a fraud. The site also will provide a chance to report the hoax attempt.

EarthLink says that it receives about 40,000 telephone calls or e-mails each month from subscribers who have received one of the fraudulent e-mails. (Earthlink)

**

HAM RADIO BUSINESS: A SEARCHABLE CQ MAGAZINE ARCHIVE

Finding an article or an advertisement in a back issue of CQ Magazine is about to become only a mouse click away. This, as CQ Communications and Buckmaster Publishing announce plans to create a searchable on-line archive of CQ magazines back issues.

Buckmaster, which produces the Hamcall CD has for decades filmed issues of CQ onto microfiche for use by researchers and hobbyists. Buckmaster also provides advanced scanning and searching technology for on-line posting of documents for major corporations. Now this same technology will be applied to back issues of CQ.

As currently envisioned, searches will be free, while access to reading and printing specific pages will require a subscription at a nominal fee. Eventually Buckmaster plans to have every issue of CQ available dating back to the magazine's first issue in January 1945.

A beta test version covering CQ from 1990 to 2002 is already on-line. The archive may be accessed at http://hamcall.net/cgi-bin/cqcgi. (CQ)

**

WITH ARNEWSLINE: YHOTY NOMINATIONS CLOSE JUNE 30TH

And a reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award closes midnight on Wednesday, June 30th. If you are planning to nominate a youngster for this years award or, if you want to update a previous years nomination -- and have not yet done so -- you have only about two weeks left to do so.

The Young Ham of the Year Award program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states. He or she must have made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org.

Again, the cutoff for nominations this year is midnight on June 30th. The award presentation takes place in August at the Huntsville Hamfest in Alabama. (ARNewsline(tm))

**

BREAK 2

This is ham radio news for today's radio amateur. From the
United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: INSTANT MESSAGING EXPANDING WORLDWIDE

Wonder where some of your ham radio buddies are these days? Maybe they are now using Instant messaging instead of 2 meter FM. Norm Seeley, KI7UP, has more:

--

According to Tech Web News, Instant Message use is growing steadily among corporate workers who use free services from companies like America Online, Microsoft, and Yahoo to send quick text messages to coworkers, family, and friends. And by 2008 closer to 80 percent of corporations worldwide are expected to use either public or private Instant Messaging networks.

A recent study by The Radicati Group says that by 2008 the number of Instant Message users worldwide is expected to reach 670 million. Business wise, this equates to revenues in the $413 million range.

Even so, the percentage of people using public networks and private networks is expected to remain the same. That's at 88 percent public and 12 percent private, respectively. The reason: Its hard to get people to pay for what someone else is giving away for free.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, reporting.

--

Ham radio groups are also turning to Instant Messaging. According to Internet postings, it comes in handy when there is a net to be held and propagation goes away. (TechWeb Online)

**

HAM INTERNET NEWS: THE VHF REFLECTOR BACK ON LINE

And speaking about instant messaging, or almost instant messaging, news that the VHF Reflector is back on line. This, according to Bob Vaughan, KC6SXC, who oversees the systems operation.

In a posting, Vaughn explained that the W6YX server that hosts the VHF Reflector suffered a disk failure and was off line for the past month. Vaughn says that the team has now recovered the data from the failed disk and has put the system and the Reflector back on-line. (VHF Reflector)

**

ON THE AIR: KY REPEATER NEEDS A NEW HOME

The Repeater Journal reports that the Danville, Kentucky, 146 point 655 WD4DZC repeater is looking for a new site. According to trustee George Griebe, WQ4Z, the tower supporting the systems antenna is to be taken down and will not be replaced.

Griebe says that the Wilderness Road Amateur Radio club which sponsors the repeater plans to keep it on the air from a temporary location with reduced coverage. Meantime the club is continuing its search for a suitable, high level, wide coverage permanent site. (Repeater Journal)

**

THE SOCIAL SCENE: OHIO IN JULY

Turning to the ham radio social circuit, the 7th annual OH-KY-IN hamfest is slated for the July 24th at the Diamond Oaks Career

Development Center in Cincinnati Ohio. The event will feature commercial vendors, a flea market and much more. Information is on line at www.ohkyin.org or by e-mail to n8bv@juno.com. (OH-KY-IN)

**

THE SOCIAL SCENE: COLORADO IN JULY

And the Northern Colorado Amateur Radio Club will hold its 2004 Superfest at the Budweiser Events Center in the Larimer County Fairgrounds on July 17th. Talk-in is on the 145.115 Mhz repeater with a 100 hertz tone access. For information on this one contact Willis Whatley, WA5RVL, at his Callbook address. (E-mail)

**

INTERNATIONAL - GREECE: HAM RADIO AT THE SUMMER OLYMPICS

Some more good news for foreign radio amateurs visiting Greece for the Summer Olympic Games. From the August 1st through September 15th hams from CEPT signatory nations will be permitted to operate in Greece without the need to submit any papers for a license. They will also be allowed to use the special prefix J42004. Meantime, Greek radio amateurs can use the special prefixes SX2004 or SY2004 through the 15th of November in celebration of the games. (GB2RS)

**

DX

In D-X, word that MM0AFJ will be on the air from the Island of Harris. This, from the 27th of June until the 2nd of July, mainly in the mornings on 80 to 10 meters CW and SSB. There may be some activity on 160 meters in the evenings. Requests for skeds should be sent via e-mail to m0afj@tiscali.co.uk. QSL direct to MM0AFJ at his Callbook address. (RSGB)

Also, IK4RUX reports he will operate portable IF9 on HF SSB from Favignana between the 19th and the 26th of June. Side trips to other islands in the Egadis group as well as some lighthouse operations are also possible. QSL to the operators home call or via the bureau. (RSGB)

**

THAT FINAL ITEM: HAM RADIO HONORS THE MEMORY OF PRESIDENT RONALD REAGAN

And finally this week, ham radio finds a way to honor the memory former President Ronald Reagan. Here's Bruce Tennant, K6PZW with the rest of the story:

--

Two suburban Los Angeles area radio clubs are joing forces to honor the memory former President Ronald Wilson Reagan. This, by operating Field Day in his honor from the Reagan Library in Simi Valley, California.

According to Peter Heins, N6ZE, the two groups joing forces to honor the late United States president are the Ventura County Amateur Radio Society and the Conejo Valley Amateur Radio Club. The Ventura County group has operated Field Day before from the Reagan Library. This year, the Conejo Valley club will be joining with them for the first time.

Heins says that 2004 is the fourth year a special event will have been held at the Reagan Library using the special N-6-R call sign. The previous three were dedicated to all members of the former first family. This years Field Day operation will be specific in its remembrance of President Reagan who died of Alzheimer's disease on June 5th at age 93.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Field Day 2004 is the weekend of June 26th and 27th. Visitors to the Reagan Library will be able to listen in on amateur radio communication, talk to amateur radio stations located in other countries, and find out more about obtaining an FCC Amateur Radio License of their very own.

Also, the complete Field Day rules are on-line at the ARRL website. Its in cyberspace at www.arrl.org (N6ZE)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Again, the cutoff for submitting nominations for this years Young Ham of the Year Award is midnight on June 30th. The award presentation takes place in August at the Huntsville. Full details are on our website at www.arnewsline.org

Also, don't forget Field Day the weekend of June 26th and 27th. We'll see you on the air.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm
Don
Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

I have tried a Google search and wasn't able to turn up anything. Can anyone tell me where I can find some info on this HT? I am looking for an HT to Get on the air with and there is one of these up for auction on ebay. Problem is I know nothing about this model. Does anyone know what the power out put is for this rig? 5W maybe?
Thanks,
Bill Sinkhorn

Amateur Radio Newsline™ Report 1402 June 25, 2004

The following is an advisory and not necessarily for air. Ladies and gentlemen, Amateur Radio Newslines' Support Fund Administrator, Andy Jarema, N6TCQ:

--

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator, getting caught up with our supporters. In the month of September of last year we heard from Benton Bonney, W4PE of Orlando; monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; the St. Charles, MO ARC, WB0HSI; monthly contributor William Walters, WA2IBM, of San Jose; monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and the Anchorage ARC.

Of special mention was support received in memory of the late Roy Neal, K6DUE, by the Brackett family of Cerritos, CA. Our thanks to Sharyn, Jim, KE6FVN, David, KE6OPK, and Lynn, WA6HBS.

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1402 with a release date of Friday, June 25 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Changes coming to ham radio in New Zealand and maybe to the 40 meter band here in the United States. Find out the details on Amateur Radio Newsline report number 1402 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: A NEW HAM RADIO IN ZED-L

Big changes appear to be in store for ham radio in New Zealand. This, as the current licensing system is replaced by one test and one class of ham radio operator. ,Jim Meachen, ZL2BHF, is in Auckland where its all taking place:

--

Here's the bottom line. Our current New Zealand Amateur Radio licensing system is being renovated. We now have only one class of ham radio license in Zed-L called the General Amateur Radio License. This is just one of many changes coming to ham radio down-under as New Zealand radio amateurs discover the full outcome of their regulatory authority's review of the Amateur Radio service. It's all good!

The changes started on June 17th when a new revised Schedule attached to the Zed-L license came into effect. A Schedule here in New Zealand is kind of like a new set of rules. That's the first step. Other changes will take effect over the next 18 months or more. Many long standing problems are being eliminated and some of the changes are believed to be world firsts. Under the new structure there will be only one grade of Amateur operator license in New Zealand. That's the General Radio License that I mentioned earlier. One license means only one test needs to be administered.

A newly-licensed amateur will have immediate access to all amateur bands below 5 MHz and to all amateur bands above 25 MHz. After getting experience over 3 months and with at least 50 contacts logged, access is then permitted to all amateur radio bands.

All existing Limited Amateur licensees automatically became General Amateur licensees on June 17th irrespective of what is written on their existing licenses. There being only one license grade, callsigns will no longer indicate a class. There is already an established procedure to request a change of callsign if a licensee so wishes.

All amateur bands remain the same but a newly-extended Low Frequency band 130 to 190 kHz is being listed for the first time as an amateur allocation.

The permitted maximum transmitter power output for an amateur station on all bands is 500 watts P-E-P. With only one figure, the maximum power level in New Zealand is now mode-independent.

How about visitors to New Zealand? Touring hams holding a current amateur certificate of competency, authorization, or license issued by another administration, may operate an amateur station in New Zealand under a General User Radio License for visitors. A licensed visitor will be granted similar privileges to a New Zealand resident station for a period not exceeding 90 days. The present country-to-country reciprocal license agreements will disappear in time as more countries directly recognize the licenses issued by other administrations. This will make cross-border travel by radio amateurs a lot easier than it is today.

There are now minimum rules and restrictions for Amateur Radio in New Zealand and the future is positive.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF, reporting from Auckland.

--

With one license exam, one license grade, and with new and simplified procedures, New Zealand telecommunications regulators say that they have positioned that nations Amateur Radio Service for an exciting future. (ARNewsline(tm), ZL2BHF, Q-News)

**

RESTRUCTURING: FCC RELEASES NPRM ON 40-METER CHANGES

The FCC says pending changes in the 40-meter amateur band as a result of the 2003 World Radiocommunication Conference will improve spectrum efficiency. It said so in a rule making notice dealing with the 40 meter band. Norm Seeley, KI7UP, has the latest:

--

The ARRL Letter reports that this remark came in an FCC Notice of Proposed Rule Making in ET Docket 04-139. This is an inquiry that seeks public comments on proposed rule changes to complete domestic implementation of various World Radiocommunication Conference allocation decisions made in 2003. Among them the future of the Amateur Service 40 meter allocation.

The regulatory agency says that it anticipates that administrations in I-T-U Regions 1 and 3 will, in the near future, authorize phone emissions in the 7 point 150 to 7 point 200 MHz band segment. The FCC notes that the ARRL has requested that the United States frequency segment for phone emissions be expanded to 7 point 125 to 7 point 300 MHz. The FCC says that authorizing voice operations in this band segment would permit same-frequency US-to-DX contacts, resulting in increased spectrum efficiency.

The N-P-R-M also addresses the deployment of Earth Exploration Satellite Service-Active spacecraft in the 70-cm band. The Commission says that this operation should not cause harmful interference to, nor claim protection from, any other services allocated in the band in the United States. This includes the Amateur Satellite service as well as any others.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

Comments in the proceeding are due July 16, with reply by August 2. Interested parties may view the entire NPRM, file comments and view comments filed in ET Docket 04-139 via the FCC's Electronic Comment Filing System at www.fcc.gov/cgb/ecfs/ (ARRL)

**

RESTRUCTURING: NO VANITY CALLS IN THE UK RIGHT NOW

Vanity callsigns 'are unlikely to be introduced in the United Kingdom before March of 2006. This, according to the Radio Society of Great Britain which says that for the last three years it has been in discussion with licensing authorities over the introduction of such a program for U-K amateurs.

The latest word is that telecommunications regulators have informed the RSGB that due to software issues it is unlikely that vanity callsigns can be introduced before March 2006. In other words, the waiting goes on. (RSGB)

**

More news in a moment, but right now its time for you to identify your station. Linda Reader, N-7-H-V-F, if you please: "From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W7FP repeater serving Salt Lake City, Utah."

**

THE BPL FIGHT: ARRL JOINS IOWA HAM IN BPL INTERFERENCE STRUGGLE

The ARRL has joined in the fight on behalf of Iowa amateur and ARRL member. This, following complaints from Jim Spencer, W0SR, of Cedar Rapids, that he has suffered severe Broadband Over Powerline interference for more than two months.

According to the ARRL Letter, a formal complaint to FCC Enforcement Bureau Chief David H. Solomon calls on the Commission to order Alliant Energy's B-P-L field trial system to shut down. It also demands that the agency fine the utility $10,000 for violating the Communications Act of 1934 and FCC's Part 15 rules.

Alleging that the ongoing interference is both harmful and willful to one or more licensed radio station the ARRL asked Solomon to intervene on an emergency basis. ARRL Chief Executive Officer David Sumner, K1ZZ, who signed the letter of complaint, said Alliant Energy has been aware since March 30th. Thats the date it installed Amperion BPL equipment in Spencer's neighborhood and the interference began. (ARRL)

**

ENFORCEMENT: EX-KG6IRO FINED $10000 FOR UNLICENSED OPERATION

A man who challenged the FCC and the southern California ham radio community has been fined $10,000. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the latest on a person who the F-C-C has told to stay off the air:

--

The FCC has issued a $10,000 Notice of Apparent Liability to Monetary Forfeiture -- that's a fancy way of saying a fine -- to Jack Gerritsen, the at least temporarily former KG6IRO. This, for operating a radio station in the Amateur Radio Service without the authorization from the FCC to do so.

In a June 15th letter to the Bell, California, former licensee, the regulatory agency notes his past record of non compliance with, among other things, its orders to keep off the air. It also notes his previous conviction for interfering with police radio communications in 2000 and the November 14, 2001 decision by the FCC to set aside his ham radio ticket based on complaints about the operation of his stations. Kit also raises questions regarding his qualifications to be a Commission licensee in light of his 1999 arrest and 2000 conviction on the police radio jamming charges.

At the time of the license set aside Gerritsen was warned that he has no authority to operate radio transmitting equipment. That doing so would be considered to be a violation of Section 301 of the Communications Act and could subject him to monetary penalties or imprisonment.

But on December 9th 2001, the Bell, California Police Department notified the FCC that it had received complaints against Gerritsen for making radio transmissions. On December 28th of 2001 the FCC's Los Angeles Office issued a warning letter to Gerritsen for unlicensed operation, and basically told him to get off the air. On January 2, 2002 Gerritsen replied and asserted that the set aide of his license was improper. On January 29th, the Bell Police and the California Highway Patrol arrested Gerritsen on a probation violation charge. On May 7th of 2002 he was found guilty of the parole violation and sentenced.

Soon after his release on July 28th of 2003 the FCC began getting complaints of unauthorized transmissions over local Los Angeles area amateur, business band and public safety repeaters. The complaints alleged that the person making the transmissions identified using the call letters KG6IRO. An investigation was launched. This lead to an agent positively identifying Gerritsen on November 6, 2003 as a person holding a transceiver while the investigator recorded the radio transmissions he was making. The investigation continued with the FCC identifying Gerritsen as the interference source on November 7th 2003 and on February 9th of this year.

Now, based on what the FCC cites as conclusive evidence it has levied the $10,000 fine against Gerritsen for willful and repeated violations of Section 301. As usual, Gerritsen was given the customary 30 days to pay up or to file an appeal.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Word is that Gerritsen has responded to the FCC with a demand that the agency rescind the fine. He reportedly claims that his license granted on November 14th 2001 has not been terminated, revoked or in any way modified to prevent him from being on the air. (FCC)

**

ENFORCEMENT: THE FCC ENFORCEMENT LOG

Gerritsen is not the only ham radio enforcement story making news this week. With more, heres the FCC's Daryl Duckworth, NN0W:

--

DO NOT READ: Audio report only. Hear it in the newscast at www.arnewsline.org

--

More ham radio enforcement news in upcoming Amateur Radio Newsline reports.

--

ENFORCEMENT VICTORVILLE CA PIRATE STILL ON THE AIR

A pirate broadcaster in Victorville, California, is still operating full time on AM 660 and FM 91.3. This, in defiance of FCC actions to shut it down.

Back on March 31st, the FCC issued a $20,000 fine to alleged station owner Stanley Mark Mayo. This, for willful and repeated violation of Section 301 of the Act for operating radio transmitting equipment without the required Commission authorization.

None the less, the stations remain on the air leading to speculation that another level of enforcement action might be taken. One that could lead to seizure of the broadcast equipment and jailing of those who put the stations on the air.

For a look at the Commission's action on these stations, see www.fcc.gov/eb/FieldNotices/2003/DOC-246123A1.html (CGC, others)

**

RESCUE RADIO: A 100 WATT TRAVELERS INFORMATION STATION AT LAX

The FCC has granted a request by the managers of Los Angeles International Airport for a ten fold power increase to their Travelers Radio Information Radio service.   On December 4, 2002, managers filed the application that asked to increase power from 10 to 100 watts. The reason for the increase was to facilitate the airport's efforts to provide emergency communications to the traveling public in the event of a terrorist attack. The FCC has now granted the 100 watt request, due, it says, to the circumstances involved. More on this story is on-line http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-3843A1.doc (CGC)

**

THE SOCIAL SCENE: NEBRASKA IN JULY

Turning to the ham radio social scene, Nerbraska's Pioneer Amateur Radio Club will hold its flea market on Sunday, June 11th. The venue is the St. Charles Parish Center in North Bend. For more information e-mail mehaffey@dtnsped.net (E-mail)

**

THE SOCIAL SCENE: MARYLAND IN JULY

And the BRATS Hamfest and Computer Fest will take place July 25th at the Timonium Fairgrounds in Timonium, Maryland. This is one of the biggies that features more than 500 outdoor flea market spaces, hundreds of indoor vendors, free ham radio exams and much more. There is lots of information on this one on-line. You will find it in cyberspace at www.bratsatv.org (Press release)

**

HAM RADIO AND THE 2004 OLYMPICS: THE ATHENS 2004 AWARD

Athens 2004 Olympic Games Awards will available for all radio amateurs and short-wave listeners who make or log a requisite number of contacts with stations in Greece. This, during the period of the 15th of May until the 30th of September.

Special prefixes J4, SX and SY count 10 points each, normal SV stations count 5 points each and the Radio Amateur Association of Greece's HQ station SZ1SV counts 50 points. A total of 250 points is required for the Bronze Award, 350 for the Silver and 500 points for the Gold Award.

The address for applications is RAAG Award Manager, PO Box 3564, 102 10 Athens, Greece, or see the RAAG web site:
www.araag.org/award2004.html (RSGB)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

AN ARNEWSLINE FOLLOW-UP: MILITARY APPRECIATION DAY

A follow-up to a story we ran several weeks ago. Thanks to the efforts of several amateur radio operators in Ft. Wayne, Indiana a message of hope and appreciation was sent via the airwaves to our military personnel around the world. Newsline's Jack Parker W8ISH has the details:

It's official. By proclamation, May 29th, is officially Amateur Radio Military Appreciation Day in Fort Wayne, Indiana. The event was organized to honor and show appreciation to those that serve and have served in the military and related auxiliary groups. Planning for the event started last spring and quickly grew into a nationwide effort as organizer Emery McClendon KB9IBW spread the word to amateurs and MARS operators in the US and around the world.

The key to success centered on what Amateur Radio could do to let our

Military members know that people supported them. Unlike written letters, amateur radio allowed Americans, in their own voice and words, tell the troops how much they care.

To get lots of public input, event organizers searched for a special event location. The Fort Wayne Wizards baseball team got into the game by offering up a spot at their stadium and a home game crowd. The effort grew momentum when radio volunteers from three Allen county amateur radio groups joined the ranks to spread the good word.

The amateurs ran three Echolink stations, IRLP, and two HF stations along with PSK31. The event scored local media coverage from newspapers, radio and network TV stations. Indiana Governor Joe Kernan, a former Vietnam POW and Indiana's senior Senator Dick Lugar both sent proclamations. They were just two of several proclamations read in a special ceremony before the first pitch of the baseball game. Many of the 65-hundred fans on hand, took advantage of the amateur radio connection to express their support to the military stationed around the world.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH

--

The Fort Wayne hams say their mission was a success. They now plan to make Amateur Radio Military Appreciation Day an annual event. (ARNewsline(tm), KB9IBW)

**

HAM RADIO ON THE INTERNET: THE AOL RADIO COMMUNICATIONS FORUM

If you use America Online to get your e-mail and have never explored the Radio Communications forum pages, then you are missing half the fun. Almost since the day AoL took to Internet, the Radio Communications Forum has been a part of the service, and its not just limited to ham radio operators either. No matter what you radio hobby interest, there is probably a board for you. C-B. Scanners. You name it. There's a place for you.

So the next time you sign on and hear the famous words -- "you've got mail" -- type in the keywords radio communications and join the other radio hobbyists around the world who make this area of AoL their cyberspace home." (ARNewsline(tm))

**

HAM RADIO IN SPACE: AN ORBITAL FIELD DAY

Ham radio space travelers Mike Fincke, KE5AIT, and Gennady Padalka, RN3DT, may participate in Field Day from the International Space Station if time permits. ISS Ham Radio Project Engineer Ken Ransom, N5VHO, sent Field Day operating instructions and pass times to the ISS support team at Johnson Space Center. If they were on, Fincke should have been operating as NA1SS. Padalka would likely have signed RS0ISS. Both stations would be classified as 1 Alpha operations. (ARISS)

**

HAM RADIO IN SPACE: ITS A GIRL

And less we forget, a word of congratulations to Astronaut Mike Fincke and his wife Renita on the birth of their second child. Tarali Fincke was born on Friday June 18th with KE5AIT himself making the announcement from the orbiting I-S-S. (N1ORC)

**

THE EDUCATION FILE: THE 2004 TAPR - ARRL DCC

On the educational agenda, the 2004 TAPR and ARRL Digital Communications Conference will be held September 10th to the 12. The venue is the Airport Holiday Inn in Des Moines, Iowa and the planners say that are now accepting papers for the conference proceedings. You do not have to be present at the conference to have your paper included in the proceedings.

Submissions are due before August 10th. Send them to Maty Weinberg at ARRL Headquarters, 225 Main Street, Newington, Connercticut. The zipcode is 06111 and you will find more conference information on the web at www.tapr.org/dcc (TAPR)

**

WORLDBEAT - INDIA: A NEW HAM RADIO INITIATIVE

In world news. India's national Amateur Radio society says that it plans to conduct various programs to promote Amateur Radio as part of a disaster mitigation program in many venues across that country. Many local radio amateurs and clubs across India plan to back this National Institute of Amateur Radio initiative and also take part in this program. (NIAR via Q-NEWS)

**

WORLDBEAT - SCOTLAND: RSGB DISTRICT NAME CHANGES

And some major changes to the two Radio Society of Great Britain Scottish Regions have been announced. Region 1, previously known as Scotland West and the Western Isles, becomes Scotland South and the Western Isles Region 2, previously known as Scotland East and the Highlands becomes Scotland North and the Northern Isles.

As a result of these changes, two new RSGB districts will be added to Region 1. These are District 15 to be called Lothians and District 16, the Borders. The Deputy Regional Manager for District 15 is Dave Stockton, GM4ZNX. (GB2RS)

**

DX

In D-X, word that IZ3EFL is currently active as S79DF from the Seychelles. Look for him during his evening hours on 20 meters SSB. He expects to remain there for quite some time so QSL as directed on the air. (GB2RS)

And PA5M is now in Sudan and will be active in his spare time as ST2DX. He will be there for about one month. QSL is via PA7FM. (GB2RS)

**

THAT FINAL ITEM: D-DAY AND HAM RADIO - NEW ORLEANS STYLE

And finally this week, the story of ham radio helping to celebrate a national holiday, southern style. It took place in New Orleans and Don Wilbanks, AE5DW, is there with the rest of the story:

--

The weekend of June 5th and 6th the Jefferson Amateur Radio Club, based in Metairie, Louisiana operated W5D, a special event station to commemorate the 60th anniversary of the D-Day invasion at the National D-Day Museum located in downtown New Orleans.

Event co-chairman Keith Barnes, W5KB reports that by all measures it was a rousing success. Just over 600 contacts were made and the station display was very well received by visitors and Veterans alike. The hams manning the booth didn't miss many opportunities to talk up amateur radio.

The display, prominently located in the main entrance hall just past the front door, featured a large collection of World War II vintage military radio gear. Among the visitors to the station were former New Orleans Archbishop Philip Hannan, himself a World War II vet and member of the 82nd Airborne. The Archbishop actually jumped with the 82nd on D-Day.

Also stopping by was Louisiana governor Kathleen Babineaux Blanco. She even sat at the radio and made a contact.

Both Archbishop Hannan and Governor Blanco signed the commemorative poster along with World War II veteran radio operators and World War II veteran hams. The poster will be made into the commemorative certificate for those stations making contact with W5D.

For more information on the special event, along with pictures of the station and vintage radio display, take your web browser to the Jefferson Amateur Radio Club's website at www.w5gad.org. To find out more about the National D-Day Museum visit www.ddaymuseum.org.

From New Orleans, I'm Don Wilbanks, AE5DW for the Amateur Radio Newsline.

-- credit: JARC --

--

A job well done by the Jefferson Amateur Radio Club in New Orleans. (AE5DW)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A final reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award closes at midnight Eastern time this Wednesday, June 30th. If you have not yet nominated a youngster this is your last chance to do so for this years judging.

This Amateur Radio Newsline Young Ham of the Year Award is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. Again, the cutoff for nominations this year is midnight on June 30th.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

According the ARRL review of this rig, it has full break-in keying
capability. So there should be a button or menu selection to activate full
or partial break-in so that you do not have to hold the PTT closed.

Do you have the manual? I consider manuals my most important station
accessory and if I buy a radio without a manual, I immediately go on line to
find one.

Dee D. Flint, N8UZE

Manual is available at http://www.mods.dk/ and it is definitely capable of
this. The controls are part of Multi-function Row "j"

Subject: Alinco DJ 120T won't hold memories
Message-ID: <20040625232927.12159.00000591@mb-m01.aol.com>
Xref: g2news1.google.com rec.radio.amateur:298

Hi,
I hope someone can help me as I know nothing about electronics. I just made a deal to purchase the Alinco DJ 120T from someone with the understanding it won't hold anything in memory over night. I had this problem once with an HF rig and it turned out to be a bad memory back up battery that was replaced. I assume the Alinco would have the same type of set up. Am I right? Would I know the battery when I see it? (I am assuming it would look something like a hearing aid battery or watch battery). If I am right and this is what I need any one know where I might find a replacement battery?
Thanks for your help. I am getting back into the hobby after a long absence and your help will get me back on the air.
73,

Bill Sinkhorn

Hi everyone in the group........I have a nice Kenwood TM-741A Triband Mobile radio...It has 144 mhz / and 440 mhz in the radio...However, the 144 mhz (2 meter Module is not functioning...The Radio has all the modifications...I have the owner / operator manual...I'm looking to trade the radio for Either a Johnson Killawatt Tuner...or a James Millen 2 killawatt tuner...Tuner must be in good working condition...and it would be nice if it was also cosmetically in shape....

Carl N2MFW

P. S. I will take cash if the offer presents itself...

Dumbass Vic, W1WCR, was spouting his lies on the Lib Net again tonight.
Dumbass said the United States provided Iraq and Saddam Hussein with the
poiseness gas Hussein used on the Kurds. Vic said the gas was used to kill
"a few" Kurds and Sheites.
Duh! Apparently Vic views the 5,000 gassing deaths of the Kurds as being "a
few".
Where the heck does Vic manufacture these "facts" from?
Oh, wait. For guys like Vic and his malingerers it is not necessary to have
facts OR proof. Any lie will do and Vic is surely full of them.
Aside of Al Jazeera, Vic is the best propaganda machine that Saddam could
hope for.

These guys are nut cases in the extreme. A bunch of cranks, kooks, and a
conglomerate of conspiracy theorists.

When did yours expire?

There is a grace period of two years, where you can renew an expired
license, but after that you need to retest from scratch.

Happy trails,
Gary (net.yogi.bear)

Hi

What is the software hams use to identify contacts, record and log them? Is it freeware? Do you need to be logged onto the net for its updates to its directories? Any advice always appreciated, links or info,,,,,

Thank you

Bob

Jeebus on a rocket powered sled in the Utah desert!
Do you mean to say that those imbred freaks on the
Saturday night Liberty Net are still around....??
I would have thought by now that 80% of those bitchin
and moanin fatasses would be six feet under by now.
I can recall listening to them outgass back in the 80's
and I can only imagine how pathetic they must ound now
20+ years later...!

> Duh! Apparently Vic views the 5,000 gassing deaths
> of the Kurds as being "a few".
> Where the heck does Vic manufacture these "facts" from?

Does Vic still have that ANNOYING habit of eating while
he is talking? I can recall years ago this bozo saying he was
stuffing his face full of apples (like a demented chipmunk)
and talking and slobbering all over his mic. I'll bet you dimes
to a dozen Krispy-Kreme doughnutz that ole Victor has
balooned up to near 300 pounds. Probably looks just like
ole fat Junkyard Sid in Estenchia N.Mex. Poetic justice?

Does ole KJI still get on there and drive them up the
wall or has he keeled over into cemetary mulch by now also..?

> Oh, wait. For guys like Vic and his malingerers it is not necessary to
have
> facts OR proof. Any lie will do and Vic is surely full of them.

Vic & Baghdad Bob (r they one and the same??) rotflmao!

> These guys are nut cases in the extreme. A bunch of cranks, kooks, and a
> conglomerate of conspiracy theorists.

Does Harrisson from Florida still get on there and
monologue and play his stupid tapes? How about
that other guy DKJ? He used to get on from W. Va
was a former KKK and every other word was "nig--r".
Does the 14313 dentist from NNJ and the nutcase
from Central Pa still qrm them for hours at a time?

Jeeze, I gots to listen there next week. I bet half of the

guys who used to get on there from the 80's are either
dead or so hen-pecked their wives won't let em on
anymore. Probably all new lineup of kooks and goofballs.
The Lib Net was always one of ham radio's biggest "kook
magnets"...

Try taping a kiebassa to your leg and take
a walk down Castro street. Then in no time
you'll be so 'complete' that you'll be able
to catch a softball with your arse..

VOTE FOR A LEADER
Chuck Gysi, N2DUP for ARRL section manager in Minnesota

NEWS RELEASE

For immediate release
May 9, 2004
Contact: Chuck Gysi, N2DUP / N2DUP@RadioHams.net

NOTE TO EDITORS: A digital mug shot of Chuck Gysi, N2DUP, is available via e-mail request. Please specify the file format you prefer.

N2DUP announces run for ARRL Minnesota section manager

Chuck Gysi, N2DUP, has announced his candidacy for Minnesota section manager in this summer's election in the American Radio Relay League.

Gysi is a long-time ARRL volunteer and has been an active amateur radio operator for a solid 22 years. He chose to run for the section manager's position because of his leadership experience.

"I have a lot to bring to the section manager's position," Gysi said. "I am the best candidate running because of my leadership skills and long-time involvement as an amateur."

The section manager oversees the more than 2,500 ARRL members in Minnesota and appoints hams to serve in capacities ranging from official observers to public information officers.

"I can bring the ARRL Minnesota section back on track and fill unfilled key appointments," Gysi said. "I have served in a number of key ARRL positions in the past and know how to find the best people to get the job done."

ARRL members will receive ballots from league headquarters in Newington, Conn., about July 1.

Gysi currently serves as an ARRL public information officer and also has served as emergency coordinator, district emergency coordinator and official emergency station. He is a member of the Rochester Amateur Radio Club and the Minnesota Wireless Association. He also has served as a volunteer in amateur radio communications during his entire 22 years as a ham operator.

"I am the only qualified and experienced candidate running for section manager," Gysi said. "The Minnesota section has a lot of work ahead that needs to be done and only an experienced candidate can handle the task. That's why I ask you to vote for a leader. I look forward to serving my fellow ARRL members in our great state."

Gysi is available to make presentations at club meetings or other gatherings of hams anywhere in Minnesota. Call him toll-free at (888) 463-5355 or send an e-mail to N2DUP@RadioHams.net. In addition, he has set up an extensive web site about his candidacy at www.RadioHams.net.

Dag Nabbit Timmy you been knowing what these guys are for years. Too bad Riley came along and made everyone behave.

I bet if Riley would leave us alone, Sir Sidney and Kind Jewish Indian would show The Great Liberty Net a thing or two.

Donut matter..the bpl makes your ears fubar'd eventually, so it's
every station for themselves.

I'm gonna have to dust off an amp I swore I'd never use again.

Expired almost 1 year ago (Jun/July).  I know about the 2 year grace
period; its the 90 day limitation I was thinking of.  Is there a fee I
have to pay or what?

I was a General and I don't plan to let it get away....

Either do it on line via the FCC website for free or you can have the ARRL
or W5YI do it for a fee (check their websites). Note if you are an ARRL
member, the ARRL will also do it for free.

There's no fee or penalty for being late.

Since you probably don't have a CORES and FRN registration, which are needed
to do it on line at the FCC site, It might be easiest just to have the ARRL
or W5YI do it. Their fees are reasonable and listed on their web sites.

What Dee said.

People in a local radio club may be able to help you work through the
FCC online system, but writing instructions is not something I am
ready to do.

Happy trails,
Gary (net.yogi.bear)

You might wanna explain in more detail. Not sure Mr. Davies is
familiar with the following terms:
kielbasa
Castro Street
'complete' (in the context to which you referred).

In the interest of travel time, he could possibly achieve the same
effect in midtown Atlanta. Or Key West. Or the French Quarter.

He knows his history.

Back in the 80s our big mid-east enemy was Iran, and Iraq was the enemy of
Iran and was also at war with them.
(Starting to make sense now? Remember the hostage crisis?) Saddam Hussein
was also dealing with his own civil wars and was equally brutal in dealing
with his own people.

As distasteful as this sounds, back then the US supplied Iraq with weaponry,
intelligence, munitions, export-banned dual-use technologies, and biological
products including anthrax. This was all done under "the enemy of our enemy
is our friend" philosophy.

Check out this link, it's an easy read. The photo of Reagan Envoy Rumsfeld
shaking hands with Hussein is classic.

http://www.iranchamber.com/history/articles/arming_iraq.php

To see a lot more information on this topic just do a Google search for "US
supplies Iraq poison technology"

```

During the weekend of 15 and 16 May 2004, Steve (MW1STE), Mark (MW1MDH), James (M3JRP) and Adrian (M1LCR) will be visiting the Island for the purpose of a site survey, and to finalise arrangements.

During the weekend, we will operate on HF, 50MHz and 144MHz.

Listen for us on Saturday afternoon, from 2:30pm onwards on 50.115 MHz

(USB) and 144.315 MHz (USB). We will be grateful for any contacts, particularly if the station we are working can supply QRA Locater and Receive System setup (Rig and Aerial).

This is so we can ascertain what paths are available from our location. The callsign GD4WXM/P as well as individual operator callsigns will be used. We plan HF Activity to be on 3.5, 7 and 14 MHz, although this is a secondary objective. Check this page after 17 May for photographs and reports.

See http://www.gb4iom.co.uk for further details.

Adrian Rees (M1LCR)

Actually.... I'm almost certain I do.

Then I'll just go about renewing the usual way, then. I think I still
have that Form 650 here somewhere...

Thanks all!

Having contacted the VEC in my area he said bring ID and FRN or SS#.
I thought I read quite a bit on the process- nothing about having an FRN
in the ARRL site.
So I went to the FCC site, found out just what the heck an FRN is and
got one. Easy.
I don't want to seem dumb, although probably too late, but who fills out
the 605 form? Should I fill out what I can and bring it or does the VE
do all that?

Anyone experimenting with gateways from Cellular PTT to internet linking
systems such as echolink EQSO or IRLP? I'm looking for preferably a free
internet based service that will give me a VOIP conference that cellular PTT
users can call in/listen too. Callers in to the conference via cellular
telephones can pay, that I'm not too much worried about, what I'd like is
free conference hosting and free traffic from the internet. URL's would be
a appreciated.

I have been running an eQSO gateway for the last 2 years on 4m and 70cm in
the north of England. With the Nokia 5140 and the like due out soon in the
UK I am interested in linking the audio from eQSO in and out of a PTT
mobile phone conference.

There's a special version of the 605 form used by VEs. Either
the liason VE for your test session should fill one out for
you if you pre-register, or have one for you to fill out the
day of the test.

Good luck!

VOTE FOR A LEADER
Chuck Gysi, N2DUP
for ARRL section manager in Minnesota

NEWS RELEASE

For immediate release
May 15, 2004
Contact: Chuck Gysi, N2DUP / N2DUP@RadioHams.net

NOTE TO EDITORS: A digital mug shot of Chuck Gysi, N2DUP, is available via e-mail request. Please specify the file format you prefer.

N2DUP pledges to appoint youth as assistant section manager

Chuck Gysi, N2DUP, a candidate for Minnesota section manager in this summer's American Radio Relay League election, has pledged to appoint a youth as assistant section manager.

"There is no question in my mind that the future of amateur radio is youth, and if we don't value their input as to what is important in attracting them to the hobby, then we're not doing our job," Gysi said.

"It's too easy to try to think that we know what is best for youth and how to attract them to a world-class hobby," Gysi said. "However, as the father of two teen-agers, I know that we need to consult youth and value their input on the best methods to attract their interest."

Several younger hams have taken leadership roles in southeastern Minnesota, yet they are teen-agers. There are plenty of opportunities to ensure younger hams play an important role in the growth of the amateur radio hobby.

"The teen ASM I appoint will have a valuable role in my section manager's cabinet," Gysi said. "My section leadership will look to our teen ASM's input to gain more youth operators in Minnesota."

The teen ASM also will work with other young hams around the state to keep their interest in the hobby and identify new ways to put their skills to the best use of the ARRL, Gysi added.

"I want youth involved with Field Day activities, in contesting, at public service events, and more," Gysi said. "How better can we advance the participation in our hobby than to get younger operators involved and gain a taste of the various facets of amateur operation?"

Gysi is a long-time ARRL volunteer himself and has been an active amateur radio operator for a solid 22 years. He chose to run for the section manager's position because of his leadership experience.

The section manager oversees the more than 2,500 ARRL members in Minnesota and appoints hams to serve in capacities ranging from official observers to public information officers.

ARRL members will receive ballots from league headquarters in Newington, Conn., about July 1.

Gysi currently serves as an ARRL public information officer and also has served as emergency coordinator, district emergency coordinator and official emergency station. He is a member of the Rochester Amateur Radio Club and the Minnesota Wireless Association.

Gysi is available to make presentations at club meetings or other gatherings of hams anywhere in Minnesota. Call him toll-free at (888) 463-5355 or send an e-mail to N2DUP@RadioHams.net. In addition, he has set up an extensive web site about his candidacy at www.RadioHams.net.

Hi

Does anyone know where I can get a look at the Heathkit SB220 Manuals? I
would like to see the schematics on this unit especially interested in the
transformer's primary and secondary hook ups.
Any one know a link where I can find the service manual or operators manual?
Thanks
Bob

Hello,

I'm interested in acquiring the CW narrow filter YF-112c for my FT-840.

So, I would appreciate hearing some testimonials on this item before buying it!

Any comments? Will it yield better CW copying? "Must have" or isn't worth?

Hi Netters,

I have completed my DDS VFO and works fine upto 33MHz. The output is
about 250mV p-p.

Require some ideas,circuit,sechematics for a 20 meter CW transceiver
which can take the DDS.

Thanks in advance.

Hello all:

I let my license expire three or four years ago and I haven't kept up with the changes in the hobby for several years. I have two questions I hope some one could help me with.

I was wondering if I could get my old call, N8PEF, back through the vanity call rules or if I would have to chose a new one..

I also would like to know if they still have the tech plus ticket. I used to be a general and I know I could pass a 5 wpm code test with a little brush up work, but I don't think I am ready to tackle general theory, but I still want HF.

Thanks for your help,
Bill Sinkhorn

Bill, Go to www.qrz.com and take the online practice tests for General.
You may find that you are more up on the theory than you think. You may
have to study up on human RF exposure issues, tho.

Best regards,
Russ KG6TDX

Thanks for all the efforts!!!
Do you thing the playback speed is ok?
I will try to time stretch the sound file. See if that helps...

rolf

Unless someone else has already gotten it through the vanity program, you
can get it back. As the previous holder of the call, you will have priority
over others who may be requesting it at the same time. Check www.qrz.com to
see if anyone holds the call.

They no longer have the Tech Plus ticket per se but if you pass the Tech
written and the 5wpm code, you will have all the privileges of the old Tech
Plus ticket. However your license will merely say Technician. Note that
you will need to keep your CSCE to prove that you passed the code as the FCC
does not record this in the database anymore.

Once you pass your code, the CSCE is good for Tech HF privileges
permanently. However under the current rules, it is only good for 365 days
for code credit for General. The general theory is not particularly hard
but you do need to study it.

For your Tech, better get a copy of the current "Now You're Talking" and
brush up on it as there have been some changes since you were licensed.

While I don't know for certain if we supplied them with chemicals or gas, I do
know that we sold the helicopters that were designed specifically to spread
chemical weapons during the Reagan era. I hate to admit that because I think
President Reagan was the best president we have had in modern times. Given the
times and the situation at the times I am not so sure I wouldn't have made the
same decision. Remember hindsight is 20/20.

Still undecipherable by me:

?c[then if that next one is a Q, he really botches it] cerwearsnwercakce...

Right at the end of the stretched piece it sounds like he is signing. I think I hear K DE W... then it ends. I can't imagine this guy ever having a QSO...

Maybe it was a power line dragging in the dirt being blown by the wind...or the guy collected Bees (:-)

Somebody'ss going to have to transcribe all the beeps and bleaps and graphically fit them to real characters & hope there is some intelligence behind it.

Reminds me of that plane that crashed into a South American glacier during WWII and disappeared until the glacier re-gurgitated the remains a few years ago. They sent an undecipherable CW message before going down.

Amateur Radio Newsline™ Report 1399 June 4, 2004

Amateur Radio Nerwsline Report number 1399 will follow in a few
moments. First, this important announcement from our Support Fund
Administrator Andy Jarema, N6TCQ:

--

The following is not necessarily for retransmission. I guess you already know that if you are hearing my voice on a closed-circuit advisory it means that Newsline is again facing a financial crisis.

Well, you're right. The funds are so low that we may not be able to pay the bills from May. Worse, for the first time in our history, we even do not have the money to send a representative to Huntsville this
summer to present the 2004 Young Ham of the Year Award. And in two words --- "that's bad." "Real bad."

The solution to both of these problems really lies with you. Our world-wide all volunteer staff produces these newscasts for you. The all volunteer Young Ham of the Year Committee labors tirelessly each year to select a youngster to receive the Award. Joe Eisenberg, K0NEB, oversees the Newsline sponsored Roy Neal, K6DUE, Amateur Radio Mentoring Project database, doing so at no cost. The list goes on and on.

I too am a volunteer, but I have to be the realist. I'm the accountant
who has to look at the bottom line and when it turns red, I have to say -- hold on -- there is no more money to continue. And that's about where we are right now.

So, here's the bottom line. If you want the newscasts to continue. If you want the mentoring program to continue and the Young Ham of the Year Award to continue, we need you to show it now -- right now -- through your financial support of Amateur Radio Newsline.

Remember that Amateur Radio Newsline is a federally chartered 501(C)(3) and California state not-for-profit corporation. This makes your donations tax deductible, whether you're an individual or a club.
The address to send them to is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California 91066. If you missed the address don't worry. It will be repeated at the end of this week's report.

For now I thank you for listening, for responding and offer you this weeks newscast which follows immediately.

--

Amateur Radio Newsline report number 1399 with a release date of

Friday, June 4, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio on alert on a stormy Memorial Day weekend, a BPL deadline is extended, another country says goodbye to Morse code and June is Amateur Radio month. We'll tell you where on Amateur Radio Newsline report number 1399 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS AID AS TORNADOES CONTINUE

Strong storms with funnel clouds raced across Indiana during the Memorial Day holiday forcing thousands of Indianapolis residents and race fans alike to take shelter from tornadoes. Jack Parker W8ISH was tracking the storm that left behind a train of devastation while putting radio amateurs on alert.

--

For the city of Indianapolis, the Race Day storms could not have happened at a worse time. Hundreds of thousands of people were in town for the 88th running of the Indianapolis 500 mile race and for the NBA Playoff game between the Indiana Pacers and the Detroit Pistons. The rain delayed race was nearing the end when race officials threw out the checkered flag and warned nearly 400 thousand race fans to immediately take shelter.

Accordling to early reports an F3 tornado passed just south of the Indianapolis Motor Speedway and began its destructive path across the south and east side of Marion county. Hundreds of central Indiana amateur radio operators were kept busy from Sunday morning until late Sunday evening tracking the funnel clouds and reporting ground truth observations back to the National Weather Service office in Indlianapolis.

While the Pacers took on the Detroit Pistons, tornado sirens blared outside, motorists got stuck in traffic jams, and tree limbs and debris were tossed into roadways. A funnel cloud described as two blocks wide, tore the roof off a nursing home leaving nearly fifty bed-ridden patients without shelter. They spent over an hour out in the pouring rain as rescue personel attended to their injuries. Downed power lines, flooded streets and massive amounts of debris from damaged homes made it difficult for Indianapolis police and fire personnel to reach those in need.

According to the National Weather Service more than a dozen tornadoes had touched down in 10 Indiana counties. This was the third time in three years that powerful tornadoes have ripped across central and southern Indiana.

Reporting from Indianapolis, for Amateur Radio Newsline, this is Jack Parker W8ISH

--

Marengo in southern Indiana was hard hit, with at least one fatality, four injuries and numerous homes damaged or destroyed. But Indiana was not alone in dealing with weather related problems. According to news reports several people in Kansas and Nebraska were injured by the weekend's tornadoes which also ripped through parts of those states. Ham radio was on alert there as well. More on this ongoing story in future Amateur Radio Newsline reports. (ARNewsline(tm), W8ISH)

**

THE BPL FIGHT: REPLY COMMENT DEADLINE EXTENDED TO JUNE 22

The FCC has extended the deadline to file reply comments on already filed responses in its broadband over power line Notice of Proposed Rule Making ET Docket 04-37. The FCC granted the extension based on requests from the National Antenna Consortium and the Amherst Alliance.

The two organizations had sought to have the FCC postpone the filing comment deadline until either September 1 or two months after the public release of the NTIA's Phase 2 study -- whichever was later. The Commission responded that in its view an additional three weeks should be ample time to respond to any NTIA submission.

The FCC does not routinely grant such time extensions, and it denied earlier petitions, including filings from the ARRL. Now it has relented and has set a new Reply Comment deadline of Tuesday, June

22nd. (ARRL)

**

RESTRUCTURING: MORE COUNTRIES DROP CW

More restructuring has taken place in Europe. The GB2RS News Service reports that Finland has now officially dropped the Morse code requirement for that nations hams to have access to the High Frequency bands. GB2RS says that Finland actually deleted the Morse requirement on the 1st of November of 2003. Now, with the latest rules revisions there are now there are only two classes of amateur license in that European nation.

Also from GB2RS word that former French Class 2 licensees with F1 and F4 callsign prefixes are now being heard on the High Frequency bands. According to the French national amateur radio society, this change was implemented on May 16th.

But C-W is far from dying or dead on the other side of the Atlantic. In fact the fourth European High Speed Telegraphy Championships take place the 15th through the 19th of September in Montenegro and Serbia. (GB2RS)

**

RESTRUCTURING: NEW ZEALAND SAYS GOODBYE TO MORSE

Finland and France are not alone in saying goodbye to Morse code testing. So has a nation down-under.

On June 4th New Zealand's Telecommunications regulators issued a decree that says Morse proficiency testing has ended and thatNew Zealand Limited Class operators will soom have access to the high frequency bands. In fact, regulators have decided to upgrade Limited Class operators to the New Zealand General Class.

According to the notice, operators will not be required change their callsigns or take any other action.. The new rules go into effect on June 17th. (ZL2BHF)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N5JGX repeater serving Austin Texas.

(5 sec pause here)

**

ENFORCEMENT: POLICE JAMMER GETS 8 YEARS IN PRISON

A man convicted of jamming a Wisconsin emergency service radio system will spend the next 8 years behind Federal prison bars. Amateur Radio Newsline's David Black, KB4KCH, is at the south-east bureau with the details:

--

University of Wisconsin graduate student Rajib Mitra faces eight years in prison after being convicted of intentionally jamming public safety radio communications. The 25-year-old Mitra was sentenced by a federal judge as a domestic terrorist under the Patriot Act which punishes substantial disruption of a critical public infrastructure.

The computer science student converted a radio receiver to transmit tones that interfered with the 800 MHz emergency radio system used by Madison police, fire and paramedics. In all, Mitra was accused of interfering with public safety communications 37 times last year. He told a federal judge the incidents were accidental--the result of a loose wire. But the judge likened that to a fairy tale, and increased Mitra's sentence for perjury. The disruptions happened between January and October, 2003.

Assistant U-S Attorney Tim O'Shea says Mitra's crime stems more from immaturity than ideology. O'Shea says the case was about domestic terrorism, not like what happened in New York City September 11th 2001, but by the immaturity of the defendant.

Testimony included reports about disruptions that prevented police officers from communicating with each other while making arrests, keeping paramedics from getting patient information to hospital staffs and decreased safety for firefighters while on calls.

In one incident, Mitra was accused of interfering with communications for three hours on Halloween night. He was also convicted of downloading pornographic sounds from the Internet and broadcasting them over police channels.

Mitra could have been sentenced to two years in prison. He also faces three years probation and has been ordered to pay more than 6-thousand dollars to the Madison Police Department.

From the South-East bureau in Birmingham, Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline.

--

Its not known if the government will use Mitra's conviction under the Patriot Act as the basis of prosecution of others acused of the same type of crime. (ARNewsline(tm) from Capital Times, others)

**

ENFORCEMENT: RESTERAUNT FINED $10,000 FOR USING 2 METERS

Remember the case of Best Wok? The New Jersey resteraunt that was warned by the FCC to stop using an illegal high power 2 meter cordless telephone to coordinate deliveries but which continued to do so anyhow?

Well, that decision by the store manager is going to cost the company

$10,000. Thats the amount of the fine that the FCC has levvied against Best Work for transmitting on 145.8376 MHz without Commission authorization. The resteraunt was given the customary 30 days rto pay
up or to file an appeal. (FCC)

**

ENFORCEMENT: RIGHT APPLICATION - WRONG BURTON

The FCC admits that it made a mistake when it announced that it had sent a warning letter to a former California ham and designated his GMRS radio service application for a hearing. What happened? Amateur
Radio Newsline's Bruce Tennant, K6PZW, tries to sort it all out:

--

The FCC recently announced that it had sent another warning letter to Richard A. Burton, the ex-WB6JAC. This, warning him about operating without a license and designating his GMRS application for review.

Only one problem. The regulatory agency had the wrong Richard A. Burton.

It turns out that it was a Richard A. Burton in another state who, this time, applied for a GMRS license. It was not the Richard A. Burton who lives in California.

Complicating thins further the California Richard A. Burton had filed for a GMRS license over a year ago. He voluntarily rescinded his application after the FCC set it aside for review.

So what happened? According to a note in the ARRL Letter, the FCC was
acting on the belief that the latest GMRS application had come from the California Richard A. Burton. And mistakenly, the regulatory agency designated it for hearing.

For the Amateur Radio Newsline, I'm Bruce Tennnant, K6PZW, in Los Angeles.

--

By the way, we did a search on the QRZ.com callsign supersite. We found that there are 12 hams that have the name Richard Burton living in North America. Of these one is a Richard A. Burton but he does not live anyplace near the Richard Burton who was seeking the GMRS license. (ARRL, others)

**

ENFORCEMENT: TO MANY CALL SIGN CHANGES

The FCC is asking a New York, ham why he has filed over a dozen call sign change requests with the agency in the past four years. Since August 29, 2000, Kiyoshi L. Nakamura of Buffalo has held the call signs K3DJ, KJ6UZ, AD1L, K3DJ again, KH6DJ, AD1L again, K3DJ for a third time, AD2R, AD1L for a third time , AD2R, WH7S, AD1L for a forth time and AD2R for a second time. And on May 4th, he again filed a call sign change request. This time he wants to give up AD2R and get back to K3DJ for the fourh time.

In its letter to Nakamura, the FCC says that his numerous call sign change applications raise questions about apparent abuse of the licensing system. This says the FCC that with limited exceptions, each call sign would be blocked by Commission rules from being reassigned to another licensee for two years.

So, the FCC gave Nakamura 20 days from the date of its inquiry letter to respond. He was told to state his intentions regarding the filing of these applications. He was also told to coose one and only one call sign that he actually wants to keep. (FCC)

**

RADIO HONORS: AMATEUR RADIO MONTH IN NH

June is now Amateur Radio Month in New Hampshire. This, as Governor Craig Benson issues a proclamation honoring the states radio amateurs for their dedication and the service for its almost 100 year history of contributions to the advancement of communications technology.

First issued by the New Hampshire State Legislature in 1985, each succeeding Governor has recognized the role of the states Amateur Radio operators during the month of June. 2004 marks the 19th consecutive year that these proclamations have been issued. (Via e-mail)

**

TECHNOLOGY: IS IT BYE-BYE TO VHS?

Home recording using tape as a medium seems to be on its way out. According to the Consumer Electronics Association, in 2003, movie watchers rented more DVDs than VHS tapes. Also, DVD sales increased by 30% while the sale of VHS VCR's dropped by an unexpected 50% in 2003.

Whats replacing the venerable VHS system? Hard disk recorders like TIVO which have been dropping in price over the last twelve months. When combined with satellite or cable TV, these devices make delaying a program to watch later as easy as 1-2-3. (Science OnLine)

**

THE SOCIAL CIRCUIT: HAM-COM IN DALLAS TEXAS IN JUNE

Turning to the ham radio social calander, if you will be in the Dallas., Texas area the weekend of June 18th and 19th, make it a point to attend Ham-Com 2004. This is the ARRL West Gulf Convention held at the Arlington Convention Center in the Dallas suburb of Arlington. This years features include indoor and outdoor flea markets, numerous commercial exhibits, a D-X luncheon, an APRS workshop and much more.

Information on this one is on line at www.hamcom.org or by writing to Ham-Com 2004. P.O. Box 12774, Dallas, Texas, 75225. The phone and fax number is area code 214-361-7574 (Ham-Com)

**

THE SOCIAL CIRCUIT: KNOXVIOLLE TN. IN JUNE

And the 38th annual Knoxville Hamfest and Electronics Exposition is slated for June 11th and 12th. The venue is the Knoxville Exhibition, World's Fair Park in Knoxville, Tennessee. The theme this year for the event is "Promoting Youth in Amateur Radio." More information is on-line at www.w4bbb.org (K4PZT)

**

THE SOCIAL CIRCUIT: A TALE OF HAM RADIO AT NAB

Also, if you want to read more about ham radio at the recent National Association of Broadcasters Convention in Las Vegas, take your web browser over to www.haleisner.com. Then click on the column titled "The Other Side of the Control Room Glass" by our own Bill Pasternak, WA6ITF. This month Bill not only takes reads to the N-A-B show but also tells of his recent exploits at the Dayton Hamvention. Again, its all on-line at www.haleisner.com (ARNewsline(tm))

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO LAW: FREQUENCY COORDINATION FOR THE 2004 NATIONAL POLITICAL CONVENTIONS

Remember a few years ago when the ARRL became the FCC's "single Point of Contact" or spoc on repeater related matters? Well how about one for this years political conventions? Well that honor has gone to a New York based consulting engineer. Bill Pasternak, WA6ITF, has more:

--

At the request of the Frequency Coordinating Committee for the 2004 Political Conventions the FCC has designated Louis Libin, as the single point of contact -- or spoc -- for coordinating broadcast R-F operations. This, under Section 74.24 of the agency's Rules.

Libin will oversee all RF operations for broadcasters in Boston from July 26th through July 29th and in New York City from August 30th through September 2nd. Nor is this the first time for him to do so either. Louis Libin is considered one of the worlds foremost authorities in the area of RF compatibility and has worked on numerous televised events over the years.

For the Amateur Rafio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

RADIO LAW: 811 PROPOSED AS A NATIONWIDE CALL-BEFORE-DIGGING NUMBER

The FCC is asking for comments on a proposal to adopt "811" as a nationwide call-before-digging number. The regulatory agency believes that this will give excavators one simple number to call to avoid cutting buried cables, gas lines and other important infrastructure.

Currently there are 70 nationwide "One Call" centers that serve different geographic areas. They are generally accessed by dialing toll-free or local telephone numbers. The FCC however believes that having one simple number to call like 811 should promote safety and lead to fewer utility outages.

Want to know more? It's all on-line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-247171A1.doc
(CGC)

**

RADIO LAW: COURT UPHOLDS CABLE RULING

Meantime, the FCC is considering a Supreme Court appeal in cable Internet access dispute. This, after a federal appeals court says that it is standing by its October ruling that cable TV operators should open their lines to rivals who also want to use them to sell high-speed Internet service.

The Federal Communications Commission asked the 9th U.S. Circuit Court of Appeals to revisit the decision, but the court declined to do. If upheld, the circuit's decision would likely subject cable operators to the same rules as local phone companies, who are forced to lease their lines to rival providers of phone service and D-S-L Internet access.

WORLDBEAT-UK: 2004 AMSAT COLLOQUIUM IN THE UK

Turning to news from around the world, the 2004 AMSAT-UK Colloquium will be held on Friday, July 30th through Sunday, August 1. This, at the University of Surrey, Guildford, United Kingdom.

A feature of this year's meeting will be a talk and Question and Answer session with Professor Colin Pilinger of the Beagle 2 project.
More information is on-line at www.uk.amsat.org. (AMSAT-UK)

**

WORLDBEAT-ALBANIA: TIRANA ALBANIA FOR DX'ERS IN JUNE

And Albania's first ever DX Convention, is scheduled for 19th to the 20th of June in the city Tirana. Attendees will get to meet many figures from the DX community who donated equipment to put Albania on the air. This includes G3LQP, W6UM, OH2BH and T93Y. United States Amateurs should contact K2WR, at k2wr@njdxa.org for advice how to travel to this gathering. (Via e-mail)

**

ON THE AIR: FRENCH RULES CHANGE SPAWNS DX OPERATION

FT1ZL is on Amsterdam Island and is expected to become active soon. This, after the French have change their licensing structure to grant holders of that nations VHF only license operating privileges on the High Frequency bands.

French stations with the numeral 1 or 4 in their prefix can now operate the low bands using all modes except A1A, A2A, F1A and F2A. FT1ZL will use his new found privileges on 20, 17, 15, 12 and 10 meters SSB during his Amsterdam Island stay. (Internet)

**

DX

In D-X, IK4RUX says that he plans to operate portable IF1 from Favignana. He will be found on SSB and C-W from the June 19 to the 26th. QSL this operation direct or via the ARI Bureau. (GB2RS)

And K8AQM reports that his upcoming trip to Samoa will take place July 7th to the 21st. He will operate as 5WZ0TR from the   Samoan Village Resort on 160 though 10 meters. Modes will be CW, SSB, RTTY and PSK. All QSLs are via K8AA at his callbook address. (OPDX)

**

THAT FINAL ITEM: BANNED BY ONE WORD

And finally this week, the tale of why hams in Thailand were not allowed to talk to hams in other parts of the world for a number of years. The truth be known, it was all because of a three letter word. Here's Q-News Graham Kemp. VK4BB, with the rest of the story:

--

Audio report only. No text available. Lisen on-line at www.arnewsline.org/

--

And for those of you who do not speak French, the word oui -- sometimes pronounced as the English word "we" -- means "yes."

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain,
the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official
website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff

for
nominations this year is midnight on June 30th.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm
Don
Wilbasnks, AE5DW, saying 73 and we thank you for listening."

If you value radio, this may be the last and only chance to have your
voice heard to stop BPL from destroying your hobby. The FCC has extended
the comment period for BPL.

It is VERY simple to file a FCC comment. Click the link below and enter

       03-104

in box #1 (proceeding number) and fill in the blanks. The simplest way to
comment is to type your comment into the box on the bottom of the form.

http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi

If you can't think of any thing to type or wish to make this as painless
as possible, you can cut-n-paste the comment I typed below.

/*****************************/

In Writing, I wish to persuade the FCC from allowing BPL to be
implemented. The destruction or at the least, deterioration of the
shortwave bands is not only a violation of ITU laws that protect
international broadcasters from interference and jamming, it will be
destroying many people's life hobby. Amateur radio will be reduced to
users with high-power amplifiers and large antennas. Emergency
communications will be hindered to levels directly responsible for the
loss of life.

There are many technologies that make BPL unnecessary. BPL will never be
able to carry the high bandwidth demands for mass distribution of video
much less the up-and-coming HDTV.

Please do not destroy the foundation of radio communication for a unneeded
technology that is only a band-aid and hindrance to the advancement of
broadband technology.

```

Here's the text I entered - feel free to cut / paste / modify, etc.

Dear Commissioners, I wish to express my opposition to Broadband Over Power Line (BPL).

My opposition is based on the interference to the Amateur Radio service and to those listening to shortwave radio.

The Amateur Radio service was a valuable service on 9/11, providing communications backup and helping survivors contact loved ones. Given the current terrorist threat we now face, I believe that it is unreasonable to hamper this valuable - and free - resource with a known source of interference.

Further, it is simply unnecessary. While I'm sure that the power companies are looking for a new profit center, that is insufficient reason to allow them to run roughshod over others who don't have the enormous budgets for political lobbyists. There are other alternatives available for broadband that don't interfere with other services, including cable, DSL and satellites services such as DirectWay.

Thanks you for considering my petition.

Charlie, KS1C

Here's my letter, for what its worth:

I am writing to ask you not to allow the implementation of BPL (Broadband over Power Lines) in our nation's communities.

I rely on shortwave radio as a source of entertainment, world news and cultural information. I listen to low & high-power broadcasts from the world over. Reliable reception is already a challenge due to the interference caused by the deplorable state of our nation's power lines. I have had to send several complaints to my local power company due to electrical power pole arcing that interferes with my shortwave radio. Adding broadband data to these already unreliable power lines would render a bad situation worse. In my experience, power companies have little regard for complaints regarding radio interference, and are slow to respond, if at all. I consider it irresponsible to entrust

BPL technology to power companies that already have an indifferent,
monopolistic attitude towards customer service.
Power companies are also overwhelmed with maintaining the poor repair
state of their equipment. With the addition of BPL,
how will power companies manage to stay within the radio interference
regulations set forth by the FCC?

I beleive BPL would be an unreliable system of delivery, and an
unneeded duplication of existing data services. It would interfere
with all shortwave radio services, including commercial, utility,
aircraft, rescue, and amateur radio services. Its effect on higher
frequency services due to harmonic interference remains to be seen.

In all, I think BPL is a unrequired, unpredictable technology and I
urge you to prevent BPL from polluting our nation's radio spectrum.

FWIW, I sent the file to a friend of mine who is a retired railroad telegrapher.

He is saying exactly what everyone else is saying. Very sloppy sending. Running characters together. He said it is not American Morse (which he also knows).

Gang,

Last weekend, I successfully earned my tech ticket (as did my girlfriend). We're in the process of putting our shack together.

Anyway, to my question. We've picked out a transceiver kit that we're going to put together, and we know we'll need to get an antenna, too, but we really don't know much beyond this. I'm guessing I'll need a power supply, since it seems most components are designed to hook into one. What about an antenna tuner? The last radio I owned was a CB radio, and I had an SWR meter for it, but when I needed to get the SWR down, I'd just physically adjust the antenna a little bit (there was a bolt I could use to raise and lower the antenna in its housing slightly). Is this not an option with amateur radio? Should I consider purchasing an antenna tuner?

What other gear would be important in a starter setup?

Thanks.

Most radios are designed to need some kind of external power supply. That way it can be run off the car battery for mobile operation or off a power supply in the house.

Typically on the VHF and UHF frequencies, one adjusts the antenna to match the radio. At these frequencies, a tuner may add too much loss.

Several questions need to be answered before I would make any recommendations.

What frequencies are you planning on transmitting on??

What power levels will you be using on your transmitter???

Do you ever anticipate running more power than what you will be starting with??

What type of antenna are you going to be using?

How far from the transmitter will the antenna be??

What type of feedline are you planning on using from the transmitter to the antenna??

Hello all... I currently own 2 UHF MTS2000's model # HO1SDD9PW1BN.   I am
looking to trade 1 of these UHF units for a VHF version. Anyone willing to
trade or trade me a VHF radio with at least 15 channels??

Let me know so that we can work something out.

Jeff

2m band. I doubt we'll be going beyond that for a while. If and when we do, it'll be quite a while down the road.

>What power levels will you be using on your transmitter???

Something like 35W.

>Do you ever anticipate running more power than what you will be starting
>with??

Not for quite some time.

>What type of antenna are you going to be using?

I'm still trying to decide what's going to be the best choice for apartment living, but it'll probably be a basic vertical pole. Don't they call those "whip" antennas?

>How far from the transmitter will the antenna be??

A maximum of 60 feet is possible, though I am guessing that it'll be significantly less. Maybe 30 feet. Maybe even less.

>What type of feedline are you planning on using from the transmitter to
>the antenna??

Great question. Given my obviously green status, I had not thought about this. I don't even have the mental tools necessary to make a sound decision. I had guessed that I'd be using some sort of high-quality coax just because that's what I see all over the shack for my local club.

I don't know if this has been mentioned before or not. There is another problem other than interference. It's an IMPORTANT and perhaps fatal drawback.

If a line or two goes down, not only do you lose power, but also the means to communicate. Emergency messages will NOT get through to anyone connected via this setup. They will STILL need regular broadcast signals via radio or television.

In the worst case scenario, you'd lose email, phone, radio AND tv all at once. With converging technologies, this is altogether too likely.

Will the government carry the burden of responsibilty should someone be killed or hurt because of this 'broadband initiative'?

I do not have a United States address, so I can not send this suggestion myself. Please distribute this concern also. I hope it will be noticed by the communications commitee.

Re: BPL - impact on radio communications
As tests and any sort of technical common sense would make obvious, broadband transmissions on miles of unshielded power lines will create havoc with the reception of micro-volt level radio communication signals. The concept is pure nonsense to anyone with a technical background. My BSEE (with communications specialization) and top FCC commercial and amateur radio licenses does not make me a great expert, but anyone with a comprehension of radio transmission and reception knows that the BPL concept does not work, unless basic MF & HF radio is sacrificed. BPL is a poorly thought out concept, with the unlikely potential for profit driving this otherwise unfathomable concept. Please get some honest technical input before allowing this BPL debacle to continue.
Sincerely, AK

Nice letter, but it will fall on deaf ears -- FCC head Michael Powell
is a cheerleader for BPL.

My suggestion: vote for John Kerry on Nov. 2nd. Kerry does not like
Powell. Powell will be out. And we can start afresh with a new FCC
head, one who might worry more about the consequences of BPL than this
business-friendly administration ever will.

Bob

Sadly, I am aware of that. Either he's been paid off, or the people pulling his strings have been paid off by the power company special interest reps. My "but anyone with a comprehension of radio transmission and reception knows that the BPL concept does not work" and "unfathomable concept" comments were certainly directed Powell's way. Oh for the good ol' days when at least one or two of the FCC Commissioners were ex-FCC field engineers who understood something about the medium they were supposed to be in charge of.

When Powell travels to industry functions/conventions, his hotel
room/suite is usually paid for by broadcast reps. He hangs out with
them, parties with them. As an attorney, he used to represent media
conglomerates. His preferences are well known.

Unfortunately the folks at the FCC that are pushing BPL have zero comprehension of radio transmission or reception, in fact have zero comprehension of anything technical. They are a bunch of lawyers who only comprehend money. Chairman Powell wouldn't know a transistor from a doorknob, I doubt he can turn on a tv without help. He will probably leave the FCC after BPL gets rolling for some cushy outrageous paying position at some BPL intenty as his reward for helping to push this debacle down everyone's throats.

Hi,

Almost all the fcc commissioners, Mr. Powell included, have legal backgrounds, experience writing legislation for communciations industry (lobbyists ??)

special interests and working for members in congress.

Three of the comm. have received degrees from universities in
north carolina.

You are correct, it is about the money.

They tried this back in the late 1970's here in ny,
they wanted to eliminate the meter readers to save money
but that did not work out.

Don't know why they want to use the hf regions, why not 10 gig ?

Plus, dsl just dropped the price here another $ 5.00 per month to
be less expensive the the cable co. road runner net.

I don't have a tech degree or work in rf but the harmonics
over miles of cable and the expense of these repeaters and or filters
seems too expensive to turn a profit in rural areas that bpl was pushing for.

BTW, one city in MD has parted ways with their bpl partner and is looking
for another one, after spending lots of money to wire up their city.

alex

FCC Comm. have terms,
half are dem and other half are rep.

Powell will be there for a while.
He has connections.

Why do you think Kerry thinks any different than Bush on BPL? Bush has
already gone on record as being "pro-choice" on BPL. Has Kerry staked out
the opposite side of the issue?

Which politician, of either party, is against BPL? Which FCC commissioner,
of either party, is against BPL?

Frank Dresser

Great. If BPL is unworkable, let it fail in the marketplace. Do you really think any politician will vote to preempt a failure? Let's say politician A blocks BPL. Politician B says "Mr. A wants to restrict your freedom to choose! I say every American has the God given right to pick which ever high speed internet access plan he can get!!" Then sleazeball campaigner B starts a whispering campaign -- "Who's pocket is A in? The phone company's? The cable company's? The satellite company's? All of them? Well, there must be some reason he wants to restrict your freedom!!" The upcoming election might be close, and nobody is going to restrict "Freedom" this year.

Note that I used the non-partisan terms A and B to describe the politicians. I know there people around who think one party or another is the Repository of Morality and the other is the Heart of Evil, but I ain't one of 'em.

Which Commissioner do we split in half?<grin>

There are five Commissioners. No more than three may be members of the
same party.

http://www.fcc.gov/aboutus.html

Unfortunately I wouldn't count on a Democratic Presidency stopping BPL.
  Firstly, they're just as susceptible to campaign contributions as
Republicans. Secondly, the GOP Congress has a record of overturning FCC
decisions if they offend enough lobbyists. (witness the anti-LPFM
legislation - which was enacted despite a Democratic President who
opposed it)

Democratic Congresses in my lifetime never had a record of trying
anything that blatant. Doesn't mean they haven't learned from the GOP
since then.

That's one of those nonsense comments that sounds good, but doesn't work.
Once "the marketplace" gets tested, amateur radio and most of the other
users of HF and MF radio reception will be out of business - never to bounce
back once destroyed. Meanwhile, BPL will be "workable" for those areas that
never had good cable access and where people were too cheap to use satellite
or telephone alternatives. BPL isn't "unworkable" - it's the "unreasonable"
sacrifices that must be made to allow nationwide radio spectrum disruption
for some trivial gain to a few people and a few big businesses.

You must be that same guy that thought he had a God given right to dump whatever he wanted into the Nashua river when I lived along it. His corporate garbage killed all the fish and stunk-up the river for the rest of the world, but using the river for his personal dumping ground was his "right"! Some good ol' New England Yankee took on this "my-rights-over-everyone-else" guy by paying a cement truck to dump a full load of concrete in the guy's drainage canal to the river. The sheriff was called, saw what was done, heard why it was done, and went home without issuing any citation. Too bad that a load of concrete won't stop BPL.

There's an interesting analogy to this situation playing out in the airwaves right now. My understanding of this situation is as follows (and may be a bit incorrect).

Some years ago, the FCC decided to allow a company which I believe was called Fleet Telecommunications to set up some digital-packet-oriented communication on a set of frequencies in the 800 MHz range. These frequencies were located quite close to the 800 MHz narrow-band FM channels allocated to publics-safety ground (trunked police and fire systems, etc.).

There was concern expressed at the time that these digital channels might cause interference with the existing analog channels (intermodulation and receiver desensing, I think). The FCC agreed to allow the allocations, on the condition that the digital operator ensure that interference to existing allocations would not occur or would be abated.

Subsequently (I'm hazy on the details) Fleet either went out of business or was bought up... in either case, Nextel ended up as the owner of these 800 MHz digital allocations. Nextel has used them as the basis of much of its current-generation cellphone system.

The result: significant, and sometimes very severe, interference to public-safety radio operations. There have been numerous reports of police and firefighters being unable to use their radios successfully, when in proximity to Nextel cellular sites. This has resulted in very real danger to life-and-limb for police officers and firefighters.

Nextel has taken some steps to abate specific instances of this (reducing power) when it's called to their attention, but the problem remains.

There's a whole massive brouhaha taking place now, about "rebanding" the 800 MHz spectrum. This will probably involve consolidating the public-safety frequencies (requiring modification or replacement of much equipment - Nextel has offered to pay $billions to do this but there's concern that it'll cost twice that much), and moving at least some of Nextel's cellular allocations upwards to a higher frequency band. Nextel wants a big block of spectrum space in compensation, while other companies claim that the FCC has no legal authority to simply hand over that space to Nextel and that the law requires the spectrum to be auctioned to the highest bidder. No matter what the FCC decides to do, it's likely to end up being challenged in Federal court and delayed for years.

It's a horrible mess. Some claim that the FCC *could* have acted, on its own authority, to order Nextel to shut down operations in the interleaved bands, because their system is apparently violating the "we will not cause interference to other licensed operations" clauses which were part of the original Fleet allocation grant. The FCC has apparently asserted that it doesn't have authority to act on its own in the absence of a formal legal complaint from a public-safety radio organization... and no city or county or state has been willing to file such a complaint (perhaps because the cost of pursuing it against a deep-pockets company like Nextel would be very high indeed).

I agree that if BPL is rolled out en mass, it _is_ likely to cause serious interference with HF operations (amateur and otherwise), and that the momentum of "Hey, we've invested billions to field BPL, you can't just shut us down" is likely to override the original "No, there won't be interference" promised.

NEVER to bounce back? Shortwave radio is that fragile? Must not be much
keeping it going right now.

> Meanwhile, BPL will be "workable" for those areas that

If there's more people who actually want BPL more than SW radio, then maybe
they should have it. However, I seem to have less faith than you that BPL
actually works. I do have faith that people won't spend money on a system
which is unreliable.

You assume wrong. I'm not the same guy. I've never dumped anything toxic
in the Nashua river, even when you weren't living along it. In fact, I've
never been anywhere around the Nashua river.

Stopping BPL is simple. It's a political numbers game. Unfortunately,
there's more potential customers for high speed internet access than there
are SW hobbyists. I'm sure you've noticed that no Democrat is taking an
anti-BPL stance. BPL has already been approved in a couple of areas.

Or, just maybe, the politicans expect BPL to fail or succeed on it's own
merits. If it fails on it's own, then nobody gets the blame for keeping it
away from the customers.

I see, Frank. You are just a might-&-money makes right sort of guy. Maybe if the FCC will just authorize all U.S. hams to run 10KW on MF and HF frequencies, and give us full immunity to any interference claims, amateur radio can co-exist with BPL.

> won't be interference" promised.

That's real interesting about Nextel. My experience with the 800 MHz bands (LTR trunking systems) ended before digital cell phones existed, but I can certainly believe that frequency spreading must cause some com channel interference if you are near the transmitter site. Well, anyone who really believes that the FCC will mitigate interference to amateur radio that is caused by big-lobbying power companies should also believe in "temporary taxes" and Santa Clause.

The FCC's likely to look to the complaining, and responding, parties to present evidence and research and expert testimony about the issue, I believe. The big communications companies can afford to throw large amounts of money at their side of the issue, churning up large amounts of paperwork, studies, and so forth. In order to hope to win the case, the public-safety organization would have to try to refute these studies and reports-from-experts with their own. I suspect it'd run into a lot of money.

>
> I see, Frank. You are just a might-&-money makes right sort of guy.

Well, as scurrilous libel goes, that's a step up from toxic waste dumper, but you've missed the mark again. I was making a democracy arguement. The voters who want high speed access vastly outnumber the voters who are radio hobbyists. If BPL can actually deliver on it's big promises, radio hobbyists will have slim clout in Washington. Being a radio hobbyist isn't a God given right, or a natural right, or even a constitutional right.

But I think there's more to the democratic free choice arguement. What if BPL is really a goofy idea which won't work? What's the gain for any politician to block a popular, yet doomed approach? His opponent will grab the the glittering promises that the BPL folk are making, and use those promises to take votes from the "anti-BPL choice" candidate. Don't think the voters really know the difference.

I see two possible scenerios:

1) BPL works as promised. It delivers high speed internet access to millions of users at a competitive price. Since cable, DSL, microwave and sattelite providers also have to compete with the BPL providers, every user of high speed access benefits from BPL. Thousands of radio hobbyists lose. Neither the Democrats nor Republicans choose the thousands of hobbyists over the millions of internet users.

2) BPL flops. It can't provide adequate bandwidth for more than a small

number of users. The small number of users can't make up the costs of the system and BPL goes the way of the personal jet pack. Politicians who might have opposed "system choice" before it proved itself unworkable come out smelling like a rose.

>Maybe if
> the FCC will just authorize all U.S. hams to run 10KW on MF and HF

> radio can co-exist with BPL.
>
> ak
>
>

Hmmm. Do you think radio amateurs have enough friends in Washington to get anything like that? Or maybe, if amateur radio interferes with a BPL system which benefits millions, the FCC will restrict amateur radio to protect BPL?

But, if you're convinced BPL is workable and won't flop, let me suggest you join the dark side and invest in BPL. Dump your entire networth into BPL. Borrow more and toss that in too! Rewards go to those the bold who see the truth, while timid fellows such as myself stand on the sidelines. Thanks to your clear foresight, you'll soon be able to buy all the accouterments of capitalism. Buy a diamond handle cane. Buy that Top Hat you've always wanted. Buy a hand-made Isotta-Fraschini touring car with leopard skin upholstery and gold plated hardware. Don't forget to buy a chauffeur!! You'll forget about SW in no time!

http://www.prospectstreet.com/portfolio_listing.htm

Oh wait. Manassas dumped Prospect Street. Seems like they could only get 200 workable BPL connections in 6 months.

Nevermind.

I saw an analysis somewhere on the web (didn't mark the URL) that indicates BPL will not be cheaper the dial-up or various other types of service unless it is subsidized. Perhaps they plan to increase the electric rates to make it up?

Actually, they have a better idea than increasing electricity rates.
The highly effusive BPL story that ran in Time Magazine recently said
BPL will bundle internet access with telephone service and
video-on-demand.

We hams got a hell of a fight on our hands.

Video on demand??? They gotta be outta their pea-pickin' minds.. Where they
gonna get the sort of bandwidth they need to provide all those services?
It's not like they're going to have ADSL type bandwidths available to every
home (and the more homes they connect, the less bandwidth they will have
available for each).. and I have problems at times with Video on Demand with
my ADSL line (supposedly 10 Mbit, but I rarely acheive download speeds
greater than about 400Kbit).

I doubt the "benefits millions" bit, but will the FCC restrict amateur radio
if it interferes with big-business political contributors' operations ? Of
course it will.

OK -- I'll go through it.

If BPL works as promised, it will benefit millions. The BPL folk promise high speed internet access at under $30.00 a month. Every other high speed access provider will have to compete with that price. More than that, BPL promises continual power line monitoring and millions of dollars for local governments. That's what BPL promises. If BPL can come through on these promises, BPL will benefit millions.

Can BPL come through on their promises? I sure don't think so. Most people with a technical background don't think so. There's a hundred reasons to think that BPL won't be able to fulfill it's promises.

But how can it be PROVEN that BPL will fail? By talk? By computer simulations? I'm sure my opinion doesn't cut it. The ONLY way to prove that BPL cannot fulfill it's glittering promises is to -- let it fail.

BPL is being allowed. That hardly means that BPL will wipe out the SW bands. Approval was the easy part. All it took was promises.

But now, it's put up or shut time for BPL. So far, BPL's reality check doesn't seem to be going very well.

Please name the politician who would stand in the way of the BPL promises. If they did block the BPL promises, then they would hear from the thickheaded knee-jerks would be ABSOLUTELY CERTAIN that the FCC was in the pockets of the fat cats who want to keep access prices high.

I hope I've made my point clearly.

Yeah, that gets to the heart of an important issue. Will BPL somehow be
profitable?

The quality of the reporting on BPL is, more often than not, poor:

http://moneycentral.msn.com/content/P81685.asp

That guy doesn't seem to have a clue about the technical problems that the
BPL system has to overcome. I suppose he figures that since the FCC doesn't
seem much worried about cranky old hams, then BPL is on easy street. I'd
think the financial press would have wised up after the dotcom blowout.

I did see a technically literate investment write up on BPL last year. That
guy thought BPL was a loser.

The ARRL is doing a great job making themselves available to reporters. The
better stories devote a significant part to the ARRL point of view. Still,
the stories often come down to BPL vs ARRL.

Here's a pretty good antiBPL site:

http://gobpl.com/

An interesting page from that site:

http://gobpl.com/sharkbites.html

Nor does he have a clue about how people choose to spend their money. For example he mentions that there is good market potential since 80% of the internet users are still on dial up. He seems to think that they will switch to BPL. But let's look at why they are on dial up. It is cost. Dial up is still the cheapest access and it will be cheaper than the projected cost for BPL. Unless they can get much closer to dial up in price, most will NOT switch. There's a dial up service around here that is only about $10 per month. Even the most expensive dial up in this area tops out at $20 per month. BPL won't be able to snag a major share of the dial users no matter what anyone would like to believe assuming their projected costs are accurate.

I'm sure some of our right-wing preachers that have taken to the
shortwaves could mount good letter-writing campaigns, should their
broadcasts be drowned out by BPL :-)

Hello,

If you rolled tape -- or know of anyone else who rolled tape -- on any TV broadcast that aired during live coverage of the assassination of Senator Robert F. Kennedy between June 3rd and the 10th, 1968, please contact me!

I'm interested in any reel-to-reel audio tape that recorded sound from any television broadcast during early June 1968!

Whether it's a network or local television broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether the audio is distorted, whether it was recorded in a major market or in a minor market, I want to know about it!

It could be audio tape that your parent might have rolled using their old reel-to-reel tape recorder or brand new cassette recorder. Perhaps you vaguely remember a friend or acquaintance mentioning that they rolled tape on TV broadcasts that week. Or you think you know of someone who acquired such a recording.

I'm a collector, so if you have anything like this or know of someone else who does... please email me or have them email me at:

brad.johnson@turner.com
or bkj333@aol.com

P.S. But we don't have to limit this to just TV. I don't rule out radio broadcasts from early June 1968, and am interested in those too!

Thank you!

wiggle@slcollege.ac.uk

Wiggle FM 95.1 is now back and broadcasting from South Leicestershire

College in wigston, Leicester UK. We also are broadcasting over the

internet. Last year we had over 100 e-mails from our listeners from all

over the world and we would like to increase the numbers this year.

www.slcollege.ac.uk/wiggle/listenandsee.htm

Please send us an e-mail from your part of the world giving us an idea

of the reception. We'll even play you a record.(No databases and we are

not collecting e-mail addresses).

Many thanks

Wiggle FM

Amateur Radio Newsline™ Report 1396 May 14, 2004

Amateur Radio Newsline report number 1396 with a release date of
Friday, May 14, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hamvention 2004 is opening and B-P-L is
still in the
news. Find out the details on Amateur Radio Newsline report number
1396
coming your way right now.

**

HAMVENTION COVERAGE

The 2004 Dayton Hamvention is about to open its doors. One of this year's Hamvention themes is going back to the future. Our producer Bill Pasternak, WA6ITF, flew in a few days early to find out what it really means for those who will be attending the show.

--
Audio report only: Hear it at www.arnewsline.org
--

Bill, Mark Abramowicz NT3V and yours truly will all be at Hamvention to bring you all the highlights on next week's Amateur Radio Newsline report. (ARNewsline(tm))

**

THE BPL FIGHT: B-P-L EXPECTED TO DRAW ATTENTION AT DAYTON

While the latest in ham gear is certain to be grab the interest of most of those attending this year's Dayton Hamvention, the topic of Broadband Over Power Lines internet access is likely to be on the lips of many. Amateur Radio Newsline's Mark Abramowicz, NT3V has more...

--
While not much has happened in the past week on the B-P-L issue, look for lots of discussion on the Dayton Hamvention floor. You can expect to see American Radio Relay League President Jim Haynie W-5-J-B-P in the middle of it.

We told you here on Amateur Radio Newsline two weeks ago of Haynie's call to arms and his direct appeal to President Bush to abandon support for B-P-L technology.

Haynie is convinced Bush has been misled by his advisors. He and

A-R-R-L's Washington corps have asked for a meeting with the president. There's nothing new to report on that front.

But Haynie says it's important for the ham community to continue to make its voice heard by writing to the White House, your congressman and your senator about B-P-L. Even though the Federal Communications Commission turned down the A-R-R-L's request to extend the May 3 deadline for comments on B-P-L, Haynie says there are still ways to be heard.

The A-R-R-L's website (www.arrl.org) has helpful tips on writing that letter or e-mail or picking up the phone and calling your representative in Washington.

Meanwhile, the FCC is now studying the National Telecommunications and Information Agency report on B-P-L. And while the glowing press release put out by N-T-I-A touted the possibilities of B-P-L, the technical data in the report presents another picture.

And that picture is anything but fuzzy. N-T-I-A cites major interference concerns and suggests the methods used to measure B-P-L interference are inadequate.

It also cites worries B-P-L signals could affect aircraft operations and suggests more stringent measurement standards and interference mitigation techniques need to be explored.

Could that B-P-L fast-track train be slowing? No one is willing to speculate on that, especially since President Bush and F-C-C Chairman Michael Powell appear to be on the same page in their push for deployment of B-P-L.

Could the F-C-C be convinced to wait for the next N-T-I-A report and table the issue for a few months? No one knows how to read the tea leaves in Washington.

Tune in weekly to Amateur Radio Newsline and we'll keep you on top of the issue with the very latest news and views of those close to the B-P-L issue.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.
--

And look for Mark's report on the B-P-L buzz and other topics from the Hamvention floor during our special program next week produced in Dayton.
(ARNewsline(tm))

**

Ham radio did all it could to help save the life of a stricken runner at a recent foot race in Indianapolis. Jack Parker, W-8-I-S-H, has the details:

--
Audio report only: Hear it at www.arnewsline.org
--

Thanks Jack. (W8ISH, ARNewsline(tm))

**

RADIO RULES: FCC MKES "MINOR AMMENDMENTS" TO PART 97

The FCC says that it has minor amendments to various Amateur Radio rules. A bulletin from the ARRL highlights some of them including the most significant one. It involved revising the wording of Section 97.307(d), which defines spurious emissions. The updated language imposes a slightly higher standard on newer transmitters or amplifiers of any power level.

The FCC also has redefined what constitutes an Amateur Radio operator
to
reflect the advent of the Universal Licensing System electronic
licensee database.
The current rule defines an amateur operator as "a person holding a
written
authorization to be the control operator of an amateur station."
Under the
revised Section 97.3(a)(1) an amateur operator is "a person named in
an
amateur operator/primary license station grant on the U-L-S
consolidated
licensee database to be the control operator of an amateur station."

The FCC made these and several other regulatory changes on its own
motion
rather than in reaction to any petitions. The decision appeared May 5
in the
Federal Register. The changes become effective June 1st. (ARRL)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline,
heard
on bulletin stations around the world including the WB3ERZ repeater
serving
South Central Pennsylvania.

**

ENFORCEMENT: CONVICTED MURDERER LOOSES HAM TICKET

A ham serving a prison sentence for the murder of his wife has had
his Amateur
license revoked. Roger Thomas Scaggs, the now ex-W5EBC, had his
ticket
pulled after the FCC determined that he no longer holds the requisite
requirements to remain a Commission licensee.

On March 6, 1996 Scaggs was convicted of murder in the death of Penny Scaggs, his wife of thirty-five years. The court record in that case showed that Scaggs beat his wife to death with a galvanized lead pipe and then stabbed her several times. He was sentenced to a prison term of thirty-two years and fined ten thousand dollars.

The Commission says that its character policies provide that any felony conviction is a matter predictive of licensee behavior and is directly relevant to the functioning of the Commission's regulatory mission. It says that Scaggs conviction mandates the conclusion that he does not possess the requisite qualifications to be or remain a Commission licensee and that his license should be revoked. (FCC)

**

ENFORCMENT: NO FISHING COMS HERE

The owners of four trucking companies, two seafood companies and one fishing boat have all been cited by the FCC for operating without a license on amateur frequencies. According to the C-Q magazine website, three of the trucking companies are in North and South Carolina and the fourth is in Idaho. They were allegedly operating on 10 meters. The fishing boats are in the Pacific Northwest, purportedly using the 2 meter band. (CQ)

**

ENFORCEMENT: FCC AGAIN WRITES TO K1MAN

The FCC has again written to Glenn Baxter, K1MAN, and the commissions note has both good and bad news for the Belgrade Lakes, Maine radio amateur. On the positive side, the April 14th letter informs K1MAN that a review of his transmissions indicates that he is complying with the Amateur Service regulations regarding broadcasting and bulletins and station control.

The negative? The FCC alleges that K1MAN is in violation of rules regarding use of his Amateur station for pecuniary interest and those regarding deliberate interference to ongoing communications.

Also, the letter again told Baxter that his "felony affidavit complaints" will not be accepted by the regulatory agency. He was also reminded that all frequencies in the Amateur Radio Service are shared. No frequency is assigned for the exclusive use of any station, and that Baxter's station has no greater rights to a frequency at any particular time than does any other Amateur station. (FCC)

**

ENFORCEMENT: CONSERVATIVE GROUP CALLS ON CONGRESS TO REPRIMAND FCC

A faith based group is chiding the FCC for not acting more decisively in getting dirty words off the public airwaves. Amateur Radio Newsline's Jim Davis, W-2-J-K-D, has more:

--

AUDIO

--

Focus on the Family was founded by Dr. James Dobson, whose commentaries are heard on radio stations world-wide. (Published reports)

**

ENFORCEMENT: FCC CHAIRMAN DOES NOT SUPPORT REVOKING BROADCAST LICENSES

F-C-C chairman Michael Powell says he doesn't support legislation that would pull a broadcast station license after a third indecency violation. He is not opposed to high fines to get the attention of broadcasters who step across the indecency line.

Speaking at the recent National Association of Broadcasters convention in Las Vegas, Powell suggested that he would support extending indecency regulations beyond over-the-air broadcasting to other media, such as cable and satellite broadcasts, but only if the FCC is given approval by Congress.

Powell labels as a "red herring" a proposal by Viacom president Mel Karmazin for more specific decency guidelines. Viacom owns C-B-S. That's the network which aired the controversial Super Bowl half-time show with rock star Janet Jackson. (Published reports)

**

RESCUE RADIO: EMERGENCY TRAINING IN KANSAS

A day-long program on Amateur Radio emergency communications will take place Saturday, July 24, 9 AM in Kansas. This, at The Salvation Army, 420 E Santa Fe, Olathe which is 15 miles southwest of Kansas City.

According to the ARRL Letter, the day begins with "New Ham Orientation," sponsored by Johnson County Amateur Radio Emergency Service. This session will provide an overview of ARES and explain how amateurs can get involved.

Following a lunch break the Kansas Salvation Army Team Emergency Radio Network will sponsor an ARRL Emergency Communications seminar.

Seats are limited. For additional information contact June Jeffers, KB0WEQ, by e-mail to kssatern@att.net or call area code 913-856-8674 during normal business hours, Central time. (ARRL)

* *

HAM RADIO CONFERENCES: CSVHFS IN CANADA IN JULY

More information is now available on the upcoming Central States V-H-F Conference that has been mailed out and also posted to the conference website. Included are the latest highlights of conference plans, border crossing tips and Canadian currency tips. Also posted is the 2004 President's Message along with last years Noise Figure Measurement Test results and the Antenna Test Range results.

The conference is scheduled for July 22nd to the 25th at the Delta Meadowvale Resort & Conference Center in Mississauga, Ontario, Canada. All the latest is in cyberspace at www.csvhfs.org and the Ontario VHF Association's page at www.ovhfa.com. We hope that you have a great time. (Peter Shilton VE3AX)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

RADIO LAW: SAN DIEGO TV SHOP OWNER CONVICTED

Here's the kind of a story you probably have not heard of in years. How about a T-V repair shop owner convicted of duping his customers. Jim Meachen, Zed-L-2-B-H-F, has the rest of the story:

--
AUDIO
--

The store owner pleaded guilty to ten criminal counts, including grand theft, forgery, fraud and false advertising. (listeners reports)

**

EMERGING TECHNOLOGY: DTV AT A SNAILS PACE

The General Accounting Office has issued a report saying that more than 80 percent of Americans are either unaware or only "somewhat aware" of the transition to digital television signals. They are also unaware that Congress plans to sell the analog spectrum that will become available when TV stations convert from analog to digital.

Lawmakers are counting on the money to help balance the budget. However, the digital transition may be years away unless more consumers start buying digital TVs to receive the new signals. Current sales of those expensive digital sets appear to be fairly flat at best. (Science OnLine)

**

WORLDBEAT - ALBANIA: NEWS FROM ALBANIA

Turning to news from around the world, many noticed the signals from OH2BH and OH2PM bouncing in from Albania not long ago. In fact, the pair made some 6000 QSOs while visiting that nation. They were also there to remind the world of Amateur Radio about it's shared responsibility to help those in need. You are welcome to join this effort by making your old gear active from Albania. For U.S. tax payers, your donations can be processed by the Northern California DX Foundation. Contact W6OSP by e-mail to w6osp@aol.com for details. (N4GN)

**

WORLDBEAT - CANADA: SOME RAC APPOINTMENTS ANNOUNCED

Radio Amateurs of Canada's Board of Directors has approved Eric Ferguson, V-E-3-C-R, as the organizations new Treasurer. This, for the term ending Dec 31st, 2005. Feguson comes to Radio Amateurs of Canada with extensive banking experience at the Executive level at a major Canadian bank.

The Board of Directors has approved Dave Goodwin, V-Oh-1-A-U, as the Director for Radio Amateurs of Canada's Atlantic Region. Goodwin will complete the term of David Nimmo, VE1NN, who resigned in early March. (RAC)

**

WORLDBEAT - UK: NEW 6 METER BEACON ON THE AIR

And members of the United Kingdom's Blacksheep Contest Group have activated a new 6 meter propagation beacon located near the city of Hertfordshire, in grid square IO91. This, as a replacement for the GB3NHQ beacon which closed down some years ago.

The new GB3BAA beacon became operational on 50.016 MHz at 15:10 UTC on April 20th, and ground-wave reception reports from Normandy and northern England have already been received. Further reports would be most welcome, and should be sent to Mr. I. Phillips, G0RDI, by e-mail to gb3baa@77hz.com (RSGB)

**

DX

In DX, 3-B-9-F-R has been heard operating from Rodrigues Island on 10 meter FM. He was heard on the worldwide calling frequency of 29.600 MHz between 1200 and 1400 U-T-C, working Europe. (GB2RS)

Also heard on is A-P-2-J-Z-B in Pakistan. He was monitored on 12 and 17 meters SSB. Watch 24.955 MHz after 0930 U-T-C and also around 18.110 MHz after 1445 UTC. QSL direct to the operators call directory address. (GB2RS)

**

THAT FINAL ITEM: WHO INVENTED THE SCANNER RADIO - REDUX

And finally this week, an update on our recent story of who really invented the first scanner radio. We previously reported that a group of broadcast engineers working at Cape Canaveral during the early days of the space race developed the first scanner radio. This, so that the late NBC newsman Roy Neal, K-6-D-U-E, could know when a launch was going to take place.

Well, that is quite true but Harvey Cronen, a S-W-L who is one of our listeners in New Jersey has some further information. He says that musician and inventor Raymond Scott is the person who holds a patent on at least one form of automatic scanning radio.

Harvey sent us a web link to a site that chronicles the life of Scott. While he is best known as the orchestra leader on the early NBC television show "Your Hit Parade" and as the husband of the late songstress Dorothy Collins, there was another side to Raymond Scott that few in the public knew about. It is all on the website and it is there where it says that Scott actually patented a broadcast band radio receiver which tunes in on stations around the country and changes frequency by itself at any given interval. This, says the website, permitted Scott to catch most of the nations disc-jockey shows in a brief span and find out what tunes are being played.

There is lots of truly fascinating information at this very informative website about Raymond Scott, his life, his inventions that impacted on the worlds of recording and communications as well as his music. It is well worth visiting at www.raymondscott.com. (H. Cronen)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio

Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st.

Next week, a full wrap-up on Hamvention 2004 which is opening as this newscast goes to air. Our Editor Bill Pasternak, WA6ITF, is in Dayton this week, sor for now I am Don Wilbanks, AE5DW editing, anchoring saying 73 and we thank you for listening."

Organization: Cox Communications
Xref: controlnews3.google.com rec.radio.amateur:97

Hi there, everyone.
```

I'm new to this newsgroup, and maybe, with a little learning and time, I'll be here pretty often. For right now, here's where I stand:

My girlfriend and I have decided to take the jump into amateur radio. I've been loosely interested in amateur radio for something like ten years (ever since, as a Boy Scout, I participated in a "radio jamboree"), but never really got into it. My girlfriend brought up her interest in radio, and so now here we are. We're both currently studying for our Technician licenses.

Now, here's the slight twist in our case- my girlfriend is interested in amateur radio largely because she wants to learn more about radio through building a transceiver. I've done some looking around online and seen good reveiws of the Ten-Tec 2m transceiver kit, and I have been considering that. My primary concern, though is with the skill level expected to work with the kit. I'm primarily a computer scientist, not an electrical engineer. I know some basic circuit theory, and I've done some soldering before (but not a heck of a lot). My girlfriend, an anthropologist, has no experience with circuits at all, and I'm primarily going to be in the role of leading her education-through-construction.

So, can anyone here tell me if maybe the Ten-Tec 2m kit is going to be over my head? What sorts of things would I need to know in order to successfully complete the kit? Also, the kit's output is 5W. Is that going to be enough to excite some newbies for a while, or do I need to budget money for the 30W amplifier kit with it?

And if anyone can give guidelines or point us to some documentation about what sorts of antennas are good for those of us stuck in apartment living, that'd be appreciated. I've looked online, but to little avail.

Thanks!
--
Rhett.

Hi

Does anyone know of someone who repairs older style transceivers HF? An older Drake? I think the finals may need repair. Hopefully someone in Southern Ontario or Western New York?

Thank you

Bob

Here is a web page that discusses the Ten-Tec 2m transceiver kit -- URL:
http://www.g3ycc.karoo.net/tentec2.htm

Perhaps it will help you decide, perhaps not.

This is a direct appeal!

If you rolled tape -- or know of anyone else who rolled tape -- on any TV broadcast that aired during live coverage of the assassination of President John F. Kennedy between November 22nd and the 25th, 1963, please contact me!

I'm interested in any reel-to-reel audio tape that recorded sound from any television broadcast during that weekend in November 1963!

Whether it's a network or local television broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether the audio is distorted, whether it was recorded in a major market or in a minor market, I want to know about it!

It could be audio tape that your parent or grandparent might have rolled using their old reel-to-reel tape recorder on Friday, November 22, 1963 (or later that weekend). Perhaps you vaguely remember a friend or acquaintance mentioning that they rolled tape on TV broadcasts that weekend. Or you think you know of someone who acquired such a recording.

I'm a collector, so if you have anything like this or know of someone else who does... please email me or have them email me at:

brad.johnson@turner.com
or bkj333@aol.com

P.S. Hey, we don't have to limit this to just TV... I don't rule out radio broadcasts but am interested in those too!

Thank you!

I guess you are asking about Ham Logging Software if so:

Type in "ham logging software" into Google and get a multitude of programs
http://www.google.com/

Some are free, others for a reasonable cost.

Has anyone used the Icom ID-1 (the 1.2 GHz digital voice and data
transceiver)? Ham Radio Outlet has them for $1,300. It seems to me that
they wouldn't sell a lot of them until the infrastructure was in place
(digital repeaters, etc.).
Does anyone here own one? Can you use it with local repeaters? Do you
use the 128k data?

Amateur Radio Newsline™ Report 1397 – May 21, 2004

Amateur Radio Newsline report number 1397 with a release date of Friday, May 21, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Mr. Haynie goes to Washington D C and Dayton, Ohio comes alive with the sound of ham radio. These stories and more on Amateur Radio Newsline report number 1397 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: MR. HAYNIE TO MEET WITH WHITE HOUSE TELECOM ADVISORS

This weeks top story starts in Dayton Ohio and ends in Washington D-C. It was at the Dayton Hamvention that ARRL President Jim Haynie, W5JBP, announced that he would be meeting with presidential advisors art the White House Telecommunications Office to discuss the Broadband Over Powerline situation. Amateur Radio Newsline was there when a horse but upbeat W5JBP thanked the ham radio community for making the meeting come about:

--

Haynie: “When we ran the story about my FAX’ing the President of the United States a powerful letter, what you helped me do with your letters and your e-mails was to get me an appointment Thursday morning, 10 a.m. in Washington. So you helped me to do that. (applause).

--

The meeting between President Haynie and those advising Peresident Bush on telecommunicastions matters was scheduled for Thursday, May 20th. We will have a full report on it, next week. (ARNewsline(tm))

**

THE BPL FIGHT: HAM TURNS THE TABLE ON BPL PROPVIDER

Still with BPL news, word that a ham attending an industry sponsored demonstration of the technology in Australia came prepared to do battle. From Brisbane, Q-News reports:

--

A presentation was given by Piero Peroni, who is the Business Manager for the BPL trial within Aurora Energy and Adrian Wild who is the Corporate Affairs Manager within Aurora Energy.

Martin, VK7GN gave an audible demonstration of the interference on his portable HF receiver and I think it would be fair to say by all accounts the Corporate Affairs Manager was quietly horrified at the noise!

--

Whether or not the ham radio counter demonstration to Aurora Energy will slow down or stop the rollout of BPL down-under is, at this time unknown. (Q-News)

**

DAYTON HAMVENTION NEWS: A BIG SUCCESS

Back here in the U-S-A, Jim Haynie’s White House meeting announcement was just another layer of frosting on the very sweet ham radio cake known as the Dayton Hamvention. By all accounts, Hamvention 2004 was as good as any of those in the past and maybe better than some. Amateur Radio Newsline’s Mark Abramovich, NT3V, takes us on an audio tour of this years show:

--

The big buzz at Dayton was the introduction of two new, top-of-the-line HF radios.

Yaesu introduced thousands of visitors to its booth here to the FT DX 9000 - a radio the company has been developing four years. Here's Chip Margelli K7JA of Yaesu - Vertex Standard.

Over at the competition, Icom introduced showgoers to its sleek, new IC7800. It's already been out for more than a month and Icom representatives concede they underestimated the market demand for this high-end radio.

Here's Ron Rotino, W9WL, repsting Icom.

In other Dayton news, Alinco announced a new distributor relationship. Evelyn Garrison WS7A tells Amateur Radio Newsline about the new partnership.

Now Amateur Radio Newsline Editor Bill Pasternak WA6ITF also took in the show besides running his annual Town Hall forum. Bill couldn't help himself when he stopped a the U.S. Towers booth where two lovely sales, eh, models were posing for pictures. Here's the exchange between our own California guy and some young ladies who came to the Dayton Hamvention for the first time..

Behind any Dayton Hamvention is the general chairman. This year Gary De Combes N8EMO took on that enormous responsibility. At the close of the show, he summed it all up for Amateur Radio Newsline.
And how did one of the big radio manufacturers we didn't mention yet think things went. Kenwood's Leo Famie was pleased with this year's event…

And, of course, Chip Margelli, summed up what Yaesu Vertex Standard thought.

Finally, there were lots of new friends and acquaintances made during the Dayton Hamvention 2004. And, despite the rain, spirits of those scouring the flea market for goodies weren't dampened.

It was one for the record books, too, in terms of participation.

Hope to see you here, next year.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, from the convention floor at the Hara Arena - home of the Dayton Hamvention.

--

As of the time this report is being prepared the Hamvention Committee has not announced a final attendance figure, but several vendors told Amateur Radio Newsline that their sales were way up over the past few years. And thats good news for both the United States economic recovery as well as for Amateur Radio. (ARNewsline(tm))

DAYTON HAMVENTION NEWS: N8EMO AND WX8F ASKED TO RUN HAMVENTION 2005

In a related development, on Monday night, May 17th the Dayton Amateur Radio Association’s Planning Council unanimously recommended the clubs Board of Directors reappoint Gary De Combes, N8EMO and Jim Nies, WX8F as General Chairman and Assistant General Chairman respectively, for Hamvention 2005. The two were affirmed to lead the 2005 show on Tuesday night the 18th. That's only two days after the close of this years show. Normally , no action is taken to fill these positions until the June Board of Directors meeting.

More on the 2004 Dayton Hamvention in future Amateur Radio Newsline reports. (ARNewsline(tm))

RESCUE RADIO: HAMS TAKE PART IN SIMULATED AIRPORT DISASTER

Over a hundred ham radio operators from seven counties in two Eastern states, provided emergency communications support for the Saturday, May 8th disaster drill at Dulles International Airport. The exercise consisted of a simulated plane crash and fire. The aim of the session was to provide treatment and transport of 200 volunteer "victims" to area hospitals by helicopter, ambulance and bus. Bill Pasternak, WA6ITF, picks up the story from here:

--

Larry Hughs, K3HE, is the Public Information Officer for for the ARRL’s Virginia Section. He tells Newsline that the job of Amateur Radio was to provide communications between agencies at the simulated crash site, those providing patient transportation, and the participating hospitals. To accomplish this, hams from a number of the regions Amateur Radio Emergency Service groups set up several portable repeaters in and around the airport grounds. They also provided a live Amateur Television link between the site and the airport Operations Center. This allowed airport management to monitor the progress of the drill.

Hams also accompanied some of the officials at the simulated crash site to provide instant communications to other temporary operational areas. Others rode the buses that transported ambulatory victims to local hospitals. This gave planners voice communications and real-time position data via Automatic Position Reporting System. Meantime, other radio amateurs were stationed at ten area hospitals. They helped to coordinate the arrival and departure of those simulating the victims of the crash.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, reporting.

--

Dulles International Airport is in Northern Virginia, near Washington, DC.. Its also not that far from where Al Quida terrorists crashed a jumbo jet into the Pentagon building on September 11th of 2001. Back then ham radio was among the first of the “First Responders” on scene and is credited in helping to save numerous lives. (K3HE, ARNewsline(tm))

**

RESCUE RADIO: SUIT BLAMES MOTOROLA HT’S IN 911 DEATHS

The families of twelve firefighters killed when the World Trade Center in New York City collapsed on 9-11 have sued the manufacturer of the hand held radios the men were carrying. According to Popular Communications magazine, the five billion dollar action against Motorola and the City of New York claims that Motorola failed to warn the Fire Department that its hand-helds could not transmit or receive in a high rise building. Because of this, the plaintiffs contend that firefighters could not hear an order to evacuate. (Popular Communications)

**

ENFORCEMENT: NC HAM MAY FACE LICENSE RENEWAL HEARING

A North Carolina ham who allegedly interfered with repeater operation in that area may not get his license renewed. This, as FCC chief rules enforcer Riley Hollingsworth writes to Daniel Barrett, KE4NOK of Kings Mountain to tell him that his application to renew his ticket has been referred to the enforcement arm of the agency by the Wireless Telecommunications Bureau.

According to Hollingsworth’s letter, the action was based on information coming to the Commission's attention that Barrett is alleged to have used his station to interfere with various repeater operations on 145.350, 145.450 and 147.120 MHz and that he ignored requests of repeater control operators to refrain from using their repeaters. Hollingsworth’s note also says that Barrett ignored the Commission Warning letter dated December 24th of 2003 regarding use of and interference to the repeaters and that apparently Barrett’s use of, and interference to, these repeaters continues.

Hollingsworth’s letter tells Barrett that his renewal application will not be routinely granted. Rather, that the Commission may need additional information from KE4NOK in order to determine his qualifications to remain a Commission license. The letter also tells Barrett that it may be necessary to designate his application for an evidentiary hearing before an Administrative Law Judge. In such a proceeding Barrett would be required to appear at a hearing in Washington, DC. (FCC)

**

ENFORCEMENT: UNLICENSED BROADCASTER CHALLENGES FCC’s AUTHORITY

An unlicensed radio station taken off the air by the FCC last fall has challenged the regulatory agency in federal court. Attorney Mark Vermeulen, representing San Francisco Liberation Radio, says that the seizure of the station's equipment in an October 2003 raid came without proper notice and violated Constitutional protections of due process and the First Amendment.

In an appearance before U.S. District Judge Susan Illston, Vermeulen argued that -- quote -- "It's a bedrock principle that parties have a right to pre-seizure notice and a right to be heard.

But government attorney Sarah Winslow disagreed with Vermeulen's free speech arguments. She told Judge Illston that there is no First Amendment right to broadcast without a license from the FCC.

The FCC had monitored San Francisco Liberation Radio for years. They eventually tracked the station to a laundry room basement in the San Francisco home of James and Charlotte Hatch. The Hatches never made a secret of their operations. They also claim that they had unsuccessfully sought an FCC license to operate legally. (Published reports)

**

FOR THE BIRDS: FCC RETAINS BIOLOGICAL CONSULTANT

Remember all those stories about thousands of migratory birds getting killed by running into radio towers? Well the FCC has now retained the services of Avatar Environmental Services of West Chester, Pennsylvania as a biological consultant. This, to assist in fulfilling the FCC's role under the National Environmental Policy Act and other federal environmental statutes.

The CGC Communicator reports that Avatar will give the Commission access to the services of experts with training and experience in evaluating the impact of construction projects on animal and plant species.

According to CGC, Avatar has performed similar services for other agencies. The possible impact of communications towers on migratory birds is one of the immediate pressing issues. (CGC)

**

RADIO CELEBRATIONS: W6RO AT AGE 25

A big celebration out West in the world of Amateur Radio. This as the Queen Mary Ocean liner ham radio station W6RO turned 25 on April 29th.

W6RO is actually the club call sign of the Associated Radio Amateurs of Long Beach, California. Long Beach is where the retired ocean voyager is permanently birthed and open to the public as a tourist attraction. The club operates the W6RO station which is located in the Wireless Room adjoining the ships historic radio museum.

In its two and a half decades of operation, visiting hams from around the world have called C-Q and made numerous contacts using its gear, and its well known call sign phonetics of W-6-Rolling Ocean. (W6RO)

**

HAM RADIO BOOKS: NEW VHF PROPAGATION BOOK FROM CQ

CQ Communications has announced the publication of a new resource book for hams active on VHF and UHF bands. Its a book for those who want to learn more about long-distance propagation possibilities available to them.

Titled "VHF Propagation - A Practical Guide for Radio Amateurs" the book examine each of the most common long-distance propagation "modes" found on these bands. Topics covered include tropospheric scatter and ducting, Sporadic-E, Aurora, 6-meters and the F-layer, transequatorial and more. The book then explains how each mode occurs and offer tips on making the most of these band openings.

"VHF Propagation - A Practical Guide for Radio Amateurs" was written by Ken Neubeck, WB2AMU, and Gordon West, WB6NOA. It is available from many ham radio dealers or direct from CQ anytime through the CQ online bookstore. To find it take your web browser to www.cq-amateur-radio.com and then click on “Visit the CQ Store." (CQ)

**

THE SOCIAL CIRCUIT: ROCHESTER HAMFEST IN JUNE

With the 2004 Dayton Hamvention now a part of history, we turn to the ham radio social circuit for the rest of 2004. Next up is the giant Rochester Hamfest the weekend of June 4th through the 6th. As usual, it takes place at the Monroe County Fairgrounds and is combined with the ARRL Atlantic Division Convention.

Chairman Harold Smith, K2HC, tells Newsline that this years outing features over 100 inside exhibitors, 1200 flea market spaces and that very much coveted on site free parking. He also says that area hotels can be found for $69 a nmight or less.

Interested in finding out more? You can do it right on-line at www.rochesterhamfest.org or by calling the hamfest office at 584-424-7184 during business hours Eastern Daylight Time. (Rochester Hamfest)

RADIO HONORS: HAM HONORED FOR SERVICE IN IRAQ

The United States Department of Commerce has honored Fredrick Matos, W3ICM, of Annapolis, Maryland. This by presenting him with its Gold Medal Award for Distinguished Achievement.

The ARRL Letter says that Matos is an employee of the National Telecommunications and Information Administration. He was given the honor for his work to help establish telecommunications in Iraq, where he was deployed for nine months.

While in Iraq, Matos who also holds the Iraqi call YI3DX helped establish a central telecommunications authority along with assigning frequencies to local law enforcement groups. He was also responsible for issuing YI Amateur Radio licenses to both nationals and visitors.

In presenting the award April 13, Commerce Secretary Donald L. Evans welcomed Matos home and thanked him for his role in "expanding freedom around the world." (ARRL, Daily DX)

**

EMERGING TECHNOLOGY: BEWARE OF FOREIGN PET CHIPS

Heres a communications story of a different sort, but one that affects anyone with a four legged friend around the house. The United States Humane Society and other animal care organizations are cautioning pet owners that the nation's animal shelters may not have the proper scanning devices to detect and read some foreign manufactured pet identification microchip.

The warning comes as a European company has entered the microchip market and is selling its microchips in approximately 440 veterinary clinics housed in one of the nation's largest pet product retailers. But the company has not yet provided many of the nation's shelters, humane societies and veterinary hospitals with compatible scanners needed to read all the microchips currently in pets. As a result, the animal protection groups recommend that pet owners thinking about getting their pets micro-chipped contact both the chip manufacturer and their local shelter. This, to make certain that compatible 125 kHz scanners are present in their community. (Science OnLine)

**

WORLDBEAT - INDIA: FREE FOR ALL

On the international scene, Amateur Radio training classes have just started at the National Institute of Amateur Radio in India and there is a very pleasant twist. According to Administration Manager Jose Jacob, VU2JOS, the course is available free of charge to anyone in that nation who is age 12 or older. (Q-News)

**

WORLDBEAT - UK: NEW BARTG AWARDS MANAGER NAMED

Over in the U-K the British Amateur Radio Teledata Group has a new Awards Manager. This, as the group announces that Phil Cooper, GU0SUP, has taken over from Nigel Roberets, G4KZZ, in that post. Cooper will handle all awards, including the well-known Quarter-Century Award. For more information e-mail awards@bartg.demon.co.uk (RSGB)

**

WORLDBEAT - SPAIN: A WEDDING OPERATION

Spanish special event station A00FL will be on the air between the 21st and 30th of May. This, to celebrate the wedding of Prince Felipe and Doña Letizia Ortiz. If you work this one, QSL as directed on the air. (Q-News)

**

ON THE AIR OPERATIONS: THE MORRIS CANAL SPECIAL

Closer to home, July 10th and 11th are the dates when New Jersey’s Nutley Amateur Radio Society activates station W2GLQ. This, for the first ever Historic Morris Canal Special Event.

Stations will operate from various locations along the 109 miles route of he canal from 1300 to 2200 U-T-C. Operations will continue thru 2005.

More information is on the Nutley Amateur Radio Society website. Its in cyberspace at at www.hometown.aol.com/kc2aup (Press release)

**

DX

In D-X, kook for K9OT and KB9LIE to be active portable F P from Miquelon from the evening of July 2nd until noon local July 11th. This is a 100 watt operation on 160 through 6 meters from the
ham radio friendly Maxotel Hotel. They will also have a 6 meter breakable beacon on 50.120 Mhz. Emphasis will be on 6, 12 and 17 meters SSB for Peg and 160 through 30 meters CW for Paul. QSL via K9OT direct with SASE or bureau. Sorry, no electronic Q-S-L are available for this one. (Various DX sources)

**

THAT FINAL ITEM: UP - UP - AND AWAY

And finally this week, we go back to the Dayton Hamvention where Amateur Radio Newsline ran into one of the nations best known experts in Amateur Radio balloon launches. And does Bill Brown, WB8ELK have a story about recruiting new young hams using high altitude ham radio carrying balloons. Amateur Radio Newsline’s David Black, KB4KCH, has the details:

--

Bill Brown's class is all about going up up and away--and getting college credit at the same time. Brown teaches a course on building balloon payloads at the University of Alabama in Huntsville--and he makes amateur radio a big part of the curriculum.

--

Audio only: Hear it at www.arnewsline.org

--

The ham bands get used not just by the students--but by what goes up. Amateur radio experiments are aboard the payloads students assemble.

--

Audio only: Hear it at www.arnewsline.org

--

Brown's class is also creating a positive effect on amateur radio—by helping bring new people into the service:

--

Audio only: Hear it at www.arnewsline.org

--

About five students become licensed each semester. From the South - East bureau in Birmingham Alabama, I'm David Black , KB4KCH, for the Amateur Radio Newsline.

--

Again that website for more information on this very interesting project is www.WB8ELK.com (ARNewsline)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That’s in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Don Wilbanks, AE5DW, saying 73 and we thank you for listening."

This weeks newscast was recorded in part at the 2004 Dayton Hamvention and at our studios in New Orleans, Louisiana. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Susan ,

If you will go to M4 in the Memory display, you will see
in the bottom "Dup" duplex. If you want a negative split,
press Dup and you will see a - or + or nothing displayed in the window. Just
keep pressing that "Dup" button until you get the right offset. This should
work.

VOTE FOR A LEADER
Chuck Gysi, N2DUP
for ARRL section manager in Minnesota

NEWS RELEASE

For immediate release
May 23, 2004
Contact: Chuck Gysi, N2DUP / N2DUP@RadioHams.net

NOTE TO EDITORS: A digital mug shot of Chuck Gysi, N2DUP, is available via e-mail request. Please specify the file format you prefer.

N2DUP calls for changes in ARES EC staffing in Minnesota

Minnesota's Amateur Radio Emergency Service needs changes to make the system work better, according to Chuck Gysi, N2DUP, a candidate for Minnesota section manager in this summer's American Radio Relay League election.

While strides have been made to appoint more emergency coordinators (ECs) in each county of Minnesota, the system still seriously lacks an adequate number of county ECs, Gysi said.

"With all the concerns about homeland security and the need for amateur radio to interface with that activity, we need to make it a top priority to make ARES a more effective organization throughout Minnesota," Gysi said.

Currently, the state is divided into 88 EC districts. Each of the state's 87 counties comprise their own EC district, except for St. Louis County, which is divided into two, north and south.

"Unfortunately, 56 of those 88 positions in Minnesota - including four of the seven Twin Cities metro counties - are vacant," Gysi said. "That means only 32 ECs have been appointed in Minnesota. That indicates to me that the system needs an overhaul."

Gysi said he has given the EC system much thought and has discussed the matter in person with not only ECs , but also district emergency coordinators (DECs) and the state emergency coordinator (SEC).

"The plan I have floated is to ensure every county has an EC appointed," Gysi detailed. "If there isn't a ham within a county willing to take on the EC role, then we need to look to a neighboring county for another already-appointed EC to assume an additional role. From the discussions I have had in my recent travels around the state, this system will work because we will be able to have an EC in place, and then we can look at assistant ECs (AECs) or even official emergency stations (OESs) to assist within the designated county."

Gysi notes that there already some areas of the state where an EC effectively watches over more than one county, such as the system in place in Houston and Fillmore counties in far southeastern Minnesota.

"I have people willing to fill AEC and OES roles in counties without an EC, so all we need to do is get an EC in a neighboring county ready to assume additional territory, and we can get the job done," Gysi said. "My opponent has yet to advance a proposal to address this serious shortage of ECs in Minnesota. I have a solid plan that will work and plan to begin working on its implementation even before I would take office as Minnesota's next section manager."

Gysi is a long-time ARRL volunteer himself and knows the ARES program well. He has served as an EC and DEC, as well as OES and county and municipal officer for the Radio Amateur Civil Emergency Service (RACES). He has been an active amateur radio operator for all 22 years he has been licensed. He chose to run for the section manager's position because of his leadership experience.

The section manager oversees the more than 2,500 ARRL members in Minnesota and appoints hams to serve in capacities ranging from official observers to public information officers. ARRL members will be mailed ballots from league headquarters in Newington, Conn., about July 1.

Gysi is available to make presentations at club meetings or other gatherings of hams anywhere in Minnesota. Call him toll-free at (888) 463-5355 or send an e-mail to N2DUP@RadioHams.net. In addition, he has set up an extensive web site about his candidacy at www.RadioHams.net.

Try http://www.elecraft.com/ for the Elecraft radios. I was looking at them before I got an FT-100D.

I might still buy the Elecraft and build it if I every retire.

I put together a "how to set up split operation" for the Mk IIG.  It is in
Adobe .pdf format.  It covers this.  Fellas around here say it is a great
help.  I'll send it FREE if you write me. Just remove the U's in my address.

```

First off, just want to say thanks... I've received a number of private emails from collectors who have amateur recordings of one or even both of the two Kennedy assassinations, and I'm deeply grateful for all these responses! There are some great people out there, thank you!

An update. I am still looking for new audio concerning both assassinations...

So if you personally tape-recorded -- or know of anyone else who tape-recorded -- any television or radio broadcasts concerning one or both of the two Kennedy assassinations, please contact me!

I'm interested in any such recordings made during the JFK assassination in November 1963 and/or the RFK assassination in June 1968. Whether it's a network or local broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether the audio is distorted, whether it was recorded in a major market or in a minor market, I want to know about it!

It could be audio tape your dad rolled on using his old reel-to-reel tape recorder on Friday, November 22, 1963 (or perhaps later that same weekend). It could be a friend or acquaintance who mentioned to you that he recorded live coverage on June 5, 1968. It could be someone you know who acquired a recorded broadcast that someone else made.

I'm a collector, so if you have anything like this or know of someone else who does... please email me or have them email me at:

brad.johnson@turner.com
or bkj333@aol.com

Thank you so much!

Hey,
I am looking to put up a tower over here and was wondering if anyone has one to sell? Nothing that large just 30' or so.

If you know of anyone getting rid of one please drop me a note so we can work something out.

Thanks

Jeffrey - n9mxt1@aol.com

(It's in the owner's manual as well) Paul, if pressing "Dup" doesn't work,
it may be turned off in the Initial Set mode. To get into that, with the
radio "OFF", press "Lock" and
"ON". You will get a series of set-up sequences. Look in the OM, and it
will tell you what number controls "Dup". If the rig is not responding to +
or -, or just no split at all, it may be that it is turned off in the
initial set mode.
If you haven't yet explored initial set, you may find a bunch of things the
rig can do you don't even know about! LOL! The 706 is a remarkable radio
with all the functions it is able to perform in such a small package. The
down side is, some folks are turned off or intimidated by all the menus. I
am STILL learning about mine, and I have had one since the original.

Gud luck!

Jerry

Amateur Radio Newsline™ Report 1398 May 28, 2004

Amateur Radio Newsline report number 1398 with a release date of Friday, May 28, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio helps in the wake of an outbreak of tornadoes and a proposed California law could make operating a mobile station a driving distraction. Find out the details on Amateur Radio Newsline report number 1398 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: TORNADOES ACROSS THE MID-WEST BRING OUT HAM RADIO COMMUNICATORS

Dozens of tornadoes and severe storms hammered the northern Plains and Midwest in the past week. As phone lines went out and cellular systems got overloaded it was ham radio that was again called on to provide storm spotting and other communications. Amateur Radio Newsline's Don Wilbanks, AE5DW, is here with more:

--

More than a dozen tornadoes swept across southern Nebraska the weekend of May 22nd. According to news reports the tornadoes were part of three days of severe weather that knocked out telephone service and power to hundreds of thousands of people from Nebraska to Michigan to West Virginia.

Hardest hit was Hallam, Nebraska. Hallam is located 25 miles north to Lincoln and is where a 73 year old woman was killed from flying debris.   Every building in Hallam was damaged or destroyed and all normal communications was cut off. This prompted the activation of local A-R-E-S units under the leadership of Section Emergency

Coordinator Reynolds Davis, K-Zero-G-N-D.

In Lincoln, Joe Eisenberg, K-Zero-N-E-B, was active with the local ham radio Stormwatch. He described this as a terrible weather front and said that ham radio played a key role in the emergency:

--

Eisenberg: "We went out on Stormewatch early in the evening and had
spotters throughout the whole county and our spotters in the South part of the county began observing the extremely heavy rain, wind and hale, especially near the Hallem area. One of our spotters saw a semi that had been blown off the road."

--

Downed power lines and leaking propane tanks littered the Hallam, prompting the Nebraska National Guard to surround the community Sunday to keep people from entering. Newsline spoke to Sandy Ramsey of the Office of Emergency Management in Lincoln who had a lot of praise for the role that Amateur Radio is playing:

--

Ramsy: "The hams out there as storm spotters. They are just invaluable to us. They're our eyes and ears. We are in the
E-O-C
and they're our eyes in the field and we just couldn't do
this
without them. They are really an invaluable part of what we do."

--

But Nebraska was not the only place where hams were put on alert or activated. Iowa and central Michigan were also hard hit and the front also caused power and phone outages in southern Michigan, Wisconsin, northern Illinois and Iowa and northwest Ohio. On Monday night the 24th, Iowa was drenched by yet another wave of powerful thunderstorms, even as residents of the town of Independence waited for a flooded local stream to recede.

The wave of storms swept eastward early Tuesday. Illinois had high wind that damaged several structures near Jacksonville. State Police said a twister damaged a home south of Springfield.

And all across the region ham radio operators remained on alert. As we go to air their work is still ongoing and we will have more in future reports.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW in New Orleans.

--

A total of 81 tornadoes were confirmed to have touched down in the region on Saturday as a weather front stalled over the area. As we go to air, ham radio is still involved in the aftermath of the storms. (ARNewsline, K0NEB)

**

THE BPL FIGHT: MR. HAYNIE GOES TO WASHINGTON REDUX

ARRL President Jim Haynie, W5JBP, says his meeting with White House telecommunications advisors on B-P-L issues was both revealing and encouraging. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the latest:

--

Haynie says he and ARRL representatives met with Richard Russell, the White House associate director of technology in the Office of Science and Technology Policy in Washington D.C.

Haynie knew going in that the Bush administration's policy was clear: B-P-L is something that's good for America. But Haynie says Russell did offer assurances, especially in light of the interference findings about B-P-L contained in the National Telecommunications and Information Administration report.

"He did emphasize the fact that they would address the interference issues aggressively," Haynie says. "And I'm going to take him at his word at that. That they will do that.

"And I'm sure the FCC has taken note of the interference issues that NTIA has raised and as the representative for the amateur radio community, I intend to stay on top of it.

"We're not going to let this thing slide from that standpoint. They have the rules and they're printed and they're there. And we're going to make sure that they abide by those rules."

Haynie says it was clear from the start that Russell is beholden to the political agenda of the Bush administration.

"Mr. Russell heard what we had to say all right, but I think he was already predisposed to the fact that to anybody on the street - and I'm talking about the uninformed person that doesn't know about technology, broadband over powerline, where you can just plug your computer into the wall ,any wall outlet -does sound like a good thing," Haynie says. "And, I understand that.

"But on the other hand, there are issues that have to be dealt with and one of the examples I gave Mr. Russell was the fact that we could all lower our electric bills if we could burn high-sulfur coal.

"And he said, 'Well the EPA wouldn't let you do that.' I said, 'That's my point exactly. The FCC should be standing there, overseeing the rules about spectrum pollution.' I think I made my point."

Haynie says, upon reflection, one reality in the whole B-P-L debate is becoming crystal clear.

"I honestly do believe there's a disconnect between the engineers in the field, the engineers at the commission who actually understand the physics of the issue versus the politicians who are driving it," Haynie says. " I'm convinced now that's what it is. This is no longer a science issue, an issue of facts, it's an issue of politics and that disappoints me."

However, Haynie says in recent weeks certain admissions by utilities trying to work with the amateur community are significant.

"In the beginning, everybody said from the industry side that there was no interference," Haynie says. "Now they're actually saying, 'Yes, there is and we'll try to mitigate it, we'll try to work with you.' That in itself is a big step."

Haynie says there also are admissions that one major interference solution touted by B-P-L proponents - notching - just doesn't do the job across the board.

"Finally some of the people are admitting, 'OK we don't have a point-source radiator anymore, we have a continuous-source radiator such as a power line.' And they're saying that the notching techniques will work and we've actually found out that they don't work that well," Haynie says.

"The notches are not that exact. And, when it says that they notch something about 3db or 6db, that's still not enough. It has to be notched by at least 30 in order to get back down to where the amateurs can function. And that's going to be a big challenge for the industry."

Haynie says anybody studying the issue of broadband technology sees the B-P-L investment is not a good one because of the growing emphasis on creating a wireless network.

"Quite frankly, in my personal opinion, the broadband over powerlines is going to be a real flash-in-the-pan because other technologies are going to overtake it very quickly," Haynie says.

"Whenever people say they want to plug their computer into any outlet in the wall, then my question is: 'Then, why do you have a cordless phone?' And WiFi and WiMax enter that challenge by being able to go anywhere in your house and let your laptop down whether it be on your couch or in your easychair and operate broadband.

"And I think that technology is going to be the real answer to people that need that type of high-speed internet access."

Haynie says the B-P-L battle is far from over. He says the strategy now is to press regulators - especially the FCC - to enforce the interference rules.

"Hold everybody's feet to the fire on the rules," Haynie says. "And the encouraging sign I've seen in the last week or so is the fact that more and more utilities have said that they didn't think it was a viable option for them and have opted out.

"Interestingly enough, the city of Manassas now is advertising for another provider. I found that extremely curious and very interesting."

Finally, Haynie concedes the ARRL has spent hundreds of thousands of dollars on the B-P-L issue and it's looking to the amateur community to get behind the league and its work.

"People are working overtime," Haynie says. "We are burning the candle at both ends and all I would ask is the amateurs support the organization and what we're trying to do in this effort."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on the fight to stop B-P-L in future Amateur Radio Newsline reports. (ARNewsline(tm), ARRL)

RADIO LAWS: CALIFORNIA TO FINE DISTRACTED DRIVERS

California drivers who are distracted for any reason and whose actions attract law enforcement may soon face fines by eating, combing their hair or talking on a cellular telephone. This if a bill passed on May 18th by the state senate and bend to the Assembly is eventually made law. Bill Pasternak, WA6ITF, has more in this report:

--

It was called S B 1800 when Senator Kevin Murray introduced it to the California State Senate back in February. It went unnoticed by the Amateur Radio community until about a week ago when the Senate passed it and delivered to the State Assembly for further action.
That's
when news outlets state wide ran banner headlines saying that the state legislature might make it a crime to be distracted in any way -- while operating a motor vehicle in the Golden state. And that is exactly what the measure would do.

As written, the Murray bill would make it an crime for a person to operate a vehicle in an unsafe manner that results from engaging in a distracting activity while driving. What is a distracting activity? Well according to the Senator it is just about anything. Eating or drinking, smoking, reading or writing, interacting with children, animals, passengers, or objects in the vehicle, adjusting the controls of an audio or other entertainment device, or even talking on a hands free cellular telephone. And it is the last two items that could easily impact on ham radio operators or any other two way radio user that a police officer might regard as distracted just because he or she has a microphone in hand or is changing frequencies on a radio.

The bill does say that a law enforcement officer may not stop a vehicle when a driver is engaging in a distracting activity unless the officer observes that the vehicle is being operated in an unsafe manner. But it is left to the officer to decide what unsafe really is under other areas of California state law.

The proposed law does not single out or target Amateur Radio operators for enforcement, but it does not exempt hams either. In fact, the only exemptions are police, fire and emergency services but even this is limited. The measure states that an emergency service professional would be exempt from these restrictions when using a wireless telephone or other electronic device, but only as part of the course and scope of his or her duties.

What about penalties? The bill would require a first offense to be punished by a fine of $35, and a second or subsequent offense that occurs within 2 years of a prior conviction for the infraction to be punished by a fine of $150.

Also, being permitted to continue driving in California and get insurance means that you have to keep your violation points count low. Any person whose driving record shows a violation count of 4 or more points in 12 months, 6 or more points in 24 months, or 8 or more points in 36 months be presumed to be a negligent operator of a motor vehicle. This bill would prohibit a first-time violation from being given a point value, but would mandate that a 2nd or subsequent violation within 2 years to be given a value of one point. And even 2 points can cost a lot of dollars when you go to renew an auto insurance policy.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

Supporters of the proposed law cite studies blaming distractions for 25 to 30 percent of all vehicle crashes. Opponents say that the bill goes too far in meddling with the civil rights of individuals. This group vows a court fight if the measure gets signed into law.
(ARNewsline(tm) from published news reports)

**

RESTRUCTURING: FCC CHAIRMAN SAYS RESTRUCTURING CONTINUING

FCC Chairman Michael Powell has told U-S representatives Greg Walden, W7EQI, and Mike Ross, WD5DVR, that the Commission will act 'as expeditiously as possible' on Amateur Radio restructuring. This, in response to a letter from Walden and Ross a month ago that urged the FCC to adopt the ARRL's restructuring Petition for Rule Making in its entirety along with rules changes needed to put it into place.

But in his response, Powell said the League's petition was one of many. There are 18 in all. An ARRL bulletin says that judging from the FCC Chairman's letter to Walden and Ross, it would appear as if the regulatory agency plans to address all 18 petitions within the framework of a single rule making proceeding. (ARRL)

**

ENFORCEMENT: 75 METER IN INTERFERENCE BRINGS FAA REFERRAL

A California ham is under FCC scrutiny for alleged interference to ongoing Amateur Radio communications. The FCC's Daryl Duckworth, NN0W, is here with more:

--

Duckworth: "AE6QD, Steve L. Wingate, of Corte Madera, California, has been sent a warning letter regarding malicious interference on 75 meters. This consists of jamming, making threats to other operators and to law enforcement officers, and broadcasts in which he appears incoherent."

--

The FCC warned Wingate that continued incidents of such interference will subject him to license suspension and revocation proceedings, as well as a possible fine of $7,500 to $10,000. And in an unusual twist, the FCC says that since Wingate also holds a pilot's license, this matter is also being referred to the Federal Aviation Administration as well. (FCC, RAIN)

**

ENFORCEMENT: FINES AFFIRMED AGAINST TWO ALLEGED PIRATES

Fines of $10,000 each have been affirmed by the FCC against Jason Green and Gary Feldman. The regulatory agency alleges that the two are pirate broadcasters in Florida who reportedly operated on 91.9 Mhz. The FCC says that neither filed a responses to the Commission's initial findings in the case. (FCC)

**

ENFORCEMENT: A "RADIO SUMMER CAMP" TO TRAIN MORE PIRATES

Now here's one that we know will interest the FCC enforcement folks.
Writers to the CGC Communicator report that budding radio pirates can

learn how to buy or build FM transmitters and get on the air this summer. This at four-day "workshop" sessions, at least one of which will be bilingual.

Not only that. CGC readers also report that the event promoters will have transmitter and antenna kits available to attendees. For more on these strange educational check out www.freeradio.org. (CGC)

**

RADIO LAW: AIR FORCE JAMS GARAGE DOOR OPENERS

A new military radio system is jamming remote-control garage doors in communities near this Florida Panhandle base. During testing of the $5.5 million two-way radio system at Eglin Air Force Base, homeowners in Niceville, Valparaiso and the Crestview area reported that their garage door openers failed to work or went wild by themselves.

According to Air Force officials the contractor, Motorola Inc., will try to minimize the problem. Technicians will run the system on slightly different frequencies from those used by garage door openers when another test is conducted.

But an FCC spokesperson had some bas news for local homeowners. Lauren Van Wazer, said that if the Air Force has been running the system within its licensed frequencies then the users of garage door openers may have to change the operating frequencies of theirs.

By the way, the Navy says that a similar radio system has been requested for Pensacola Naval Air Station and other nearby installations. (Published reports)

NEW PRODUCTS: THE TNC WIZARD

Creative Services Software has announced the release of version 1.0 of the Kantronics and Timewave TNC Wizard. This program searches for your TNC and sound card on both serial ports and TCP/IP networks.

Creative's Rick Ruhl, W4PC, says that the TNC wizard works with built in serial ports in the TNC, USB to serial adapters and TCP/IP to serial interfaces. It also has an option to detect the soundcard in the computer and add that information to the PacTerm or PkTerm startup files without any additional setup needed at install time.

The TNC Wizard requires Windows 98 or later, with TCP/IP installed. There is no cost for the TNC wizard and it can be downloaded from the CSS website at http://www.cssincorp.com (CSS)

NAMES IN THE NEWS: INDUCTEES NAMED TO THE CQ HALLS OF FAME

CQ Amateur Radio magazine has inducted fifteen people into its Amateur Radio Hall of Fame and two into the CQ Contest Hall of Fame.

Those elected to the CQ Amateur Radio Hall of Fame include Ned Carman, Ned, W0ZSW, and Sister Alverna O'Laughlin, WA0SGJ, who co founded the Handi-Ham System to aid the handicapped. Also inducted was Ten-Tec co-founder Jack Burchfield, Jack, K4JU. His partner Al Kahn, K4FW was made a member in 2002.

Others named include Bob Heil, K9EID, whose inventions revolutionized audio in rock music live performances and amateur radio and writer Tom Kneitel, K2AES and Amateur Radio Newsline's own Bill Pasternak,
WA6ITF. Bill as honored for his quarter of a century of producing these newscasts and for creating the "Amateur Radio Newsline Young Ham of the Year Award.

The new members of the CQ Contest Hall of Fame include Steve Bolia, N8BJQ. Steve is the longtime Director of the CQ World Wide W-P-X Contests and a pioneer in computer log-checking. Also inducted was Trey Garlough, N5KO. Garlough, who also holds the call sign HC8N is a world-class contester and the creator of two major contesting e-mail reflectors.

The CQ Amateur Radio Hall of Fame was established in January, 2001, to recognize those individuals, whether licensed radio amateurs or not, who significantly affected the course of amateur radio. The CQ Contest Hall of Fame was established in 1986 to recognize those amateurs who have made major contributions to contesting. The complete list of names is on line at www dot c q dash amateur radio dot com. (CQ)

CHANGING OF THE GUARD: ARNOLD O. BECKMAN S.K.

Arnold Beckman, whose invention of a simple method to measure the acidity of California lemons spawned a scientific instrument empire has died at the age of 104. Beckman passed away on May 18th at Scripps Green Hospital in La Jolla, California, after a long illness.

Arnold O. Beckman was born in Cullom, Illinois, on April 10, 1900. In 1934 he invented the pH meter that is sill used use in citrus processing plants worldwide. The following year he founded National Technical Laboratories, and later renamed he company Beckman Instruments. Over the years, Beckman and his electronic test gear became synonymous with high quality and extreme accuracy. In 1997 the company was acquired Coulter Corporation of Miami, Florida which renamed it renamed Beckman Coulter later that same year.

Arnold Beckman, is survived by his son, Arnold Stone Beckman, daughter Patricia Beckman, two grandchildren and three great-grandchildren. His wife Mabel Meinzer Beckman died in 1989.

A complete biography of this inventor, businessman and philanthropist can be found on-line at
http://www.beckman.com/hr/memorial/mem_news.asp (Beckman-Coulter)

HAM RADIO IN SPACE: ASTRONAUT TRAINING TO BECOME HAM

The AMSAT News Service reports that Astronaut Leroy Chiao is scheduled to train at the Johnson Space Center in early June. This, to prepare for his Amateur Radio license exam. Once he passes the test and receives his call sign, he will be able to participate in the ARISS program during his stay as Expedition 10 commander on board the International Space Station. He is scheduled to fly this October. (ARISS)

**

WORLDBEAT - IRAN: IARU TRAINING PRESENTED

Turning to international news, word that the I-A-R-U recently presented an Amateur Radio Administration Course in Iran. Amateur Radio Newsline's Jim Meachen Zed-L-2-B-H-F in Auckland New Zealand
brings the details:

--

PKG HERE: In response to an invitation from the administration of the Islamic Republic of Iran, Fred Johnson ZL2AMJ representing the IARU Region 3 and Daniel Lamoureux VE2KA representing the IARU International Secretariat visited Iran to present a three-day Amateur Radio Administration Course, 26 to 28 April 2004. Fred Johnson ZL2AMJ takes up his story:

ZL2AMJ:

Since the early 1980s this course has been conducted by IARU in various forms in countries all over the world and in response to invitations from administrations to train regulators and prospective regulators in the administering of the amateur service and amateur satellite service. Related objectives include managing disaster relief communications and organizing an amateur radio society.

Our recent course in Tehran was arranged by Mr T. Shafiee and Mr M. Zomorodi of the Directorate General of Telecommunications. An excellent training room was provided for us with full support facilities including a data projector and access to a photocopier. Daniel and myself presented our course using PowerPoint displays prepared by IARU and each of the 16 participants received printed copies of the displays and many other documents and two CD-ROMs with documentation about amateur radio.

We had discussions with many radio amateurs in Tehran, some of whom attended the course. The course participants visited EP3PTT, a station established in the Ministry's office premises in Tehran. The equipment in this station was provided for Iran amateurs by from the IARU Region 3 Stars*** program and may be operated by licensed Iranian operators by arrangement.

There have been amateur radio societies in Iran in earlier years but there has not been an IARU member society. An amateur radio "club", a social meeting group, presently meets in Tehran.

ZL2BHF: ZL2AMJ reported the course as a most memorable experience. He said that Daniel and himself were warmly received.

From Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline.

--

Contact between the IARU and the amateurs and the administration of Iran is to continue with further Amateur Radio information to be provided. (ARNewsline(tm))

WORLDBEAT - ALBANIA: PROJECT GOODWILL AT DAYTON 2004

Len Geraldi, K6ANP, who is the President of the Northern California DX Foundation has announced that his organization is teaming up with Vertex Standard . The two will combine forces to donate ten complete Yaesu FT 840 stations to Project Goodwill Albania. The gear will be set up at the University of Tirana to boost the successful completion of the project.

The announcement was made at the recent Dayton D-X dinner in Ohio. At the same time Bob Ferrero, W6RJ, stepped forward on behalf of Ham Radio Outlet. He offered up a matching number of antennas. Bob Heil, K9EID, of Heil Sound said that he would supply the needed p sound gear. Other equipment was pledged by AA4XR, N3BNA, K3LP, K7JA, VE1JF, W3BTX, W4MYA, W6EUF, W6OSP, W6UM and W9JUV in addition to those already reported earlier. (Various)

**

ON THE AIR: NEW MID-AMERICA 6 METER BEACON

The Legion of Indianapolis DXers has activated a 24-hour a day 6 meter beacon. Operating as W9VW slash B on 50.069 MHz, the automated 12 watt station is located in the heart of Indianapolis in grid square E M 69 WT. The antenna is an omnidirectional horizontally polarized turnstile at 70 feet. Q-S-N reports go to W9VW, P.O. Box 18495, Indianapolis, Indiana, 46218.   (W9IND, QRZ.COM)

**

DX

In D-X, word that IN3ASW and IN3DYG will be active as TU2WL. This, from Cote d'Ivoire or the Ivory Coast through the 1st of June. They plan to operate SSB and possibly PSK31 and RTTY. (GB2RS)

And SM0CMH will be active as SM8C portable SV5 from the island of Kalymnos in the Dodecanese group to the 5th of June. He will operate CW on 10 to 80 meters and perhaps even 160 meters. For both operations, please Q-S-L as directed on the air. (GB2RS)

**

THAT FINAL ITEM: BAY TO BREAKERS

And finally this week, the story of ham radio assisting in a truly fun public service event. It called the Bay to Breakers race and its held every year in the San Francisco. David Hirtz, KG6CEL, reports from the City by the Bay:

--

Audio Only: Hear it at www.anewsline.org
--

By the way, it's called the Bay to Breakers Race because it starts in the financial district not far from San Francisco Bay and ends at the western most edge of Golden Gate Park overlooking the mighty blue Pacific. More information on this event is on line at www.baytobreakers.com. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 30th.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

When you say "taxing the system", are you using a scanner or a real
portable 2-way radio on the system ?

Okay, here's the deal. Apparently, 4 of the old frequencies from the countywide zone are no longer used for trunking, but are used as MDT's, however 2 new frequencies suddenly started being used. This change occured at least several months ago.

Earlier this year, I started a new trunker file (trunker automatically figures out the trunking frequencies being used when it runs). Since then, I've been running trunker almost every day, and it has found only 26 frequencies to now be active on the countywide zone:

```
c v856.2375,d1,ffff,37
  v856.4625,da,ffff,109f5
  v856.7375,e5,ffff,7cf
 dv857.2375,f9,ffff,210
  v857.7375,10d,ffff,108f
  v857.9625,116,ffff,130be
 av858.2375,121,ffff,a0
  v858.4625,12a,ffff,157c7
  v858.7375,135,ffff,201e
 dv859.2375,149,ffff,3
  v859.7375,15d,ffff,3fb0
  v859.9625,166,ffff,1694f
 d 860.2375,171,ffff,0
  v860.4625,17a,ffff,181ab
  v860.7375,185,ffff,6c6b
  v860.9625,18e,ffff,e4d3
  v866.0875,25b,ffff,b945
  v866.3375,265,ffff,6922
  v866.5875,26f,ffff,376f
  v867.0875,283,ffff,180d
  v867.3625,28e,ffff,151c9
  v868.1625,2ae,ffff,d41
  v868.4125,2b8,ffff,6df
  v868.6625,2c2,ffff,33b
  v868.9125,2cc,ffff,1f1
  v867.6000,3c8,ffff,10c73
```

These are the 26 frequencies you'll need to program in your scanner (just ignore all the extra letters). Notice how there are now 10 upper band frequencies (there used to be only 8), but 4 fewer lower band frequencies (there used to be 20, now there's only 16).

> Reserved for Future Use
> 866.1625   866.3000[data channel?]

Yes, those are 2 new control channels on the Pinellas system. They've been active for a little while now. Each control channel and it's voice frequencies must be programmed into it's own bank on a scanner for monitoring, just like the St Pete and countywide zones have to programmed into separate banks in a scanner.

Here are at least SOME voice frequencies that trunker has found for each of those new control channels:

```
 d 866.3000,2dc,ffff,0
 a 866.9000,2f4,ffff,0
 a 868.0750,3db,ffff,0
 a 868.3750,3e7,ffff,0
```

and

```
 d 866.1625,25e,ffff,0
 a 866.5375,26d,ffff,0
 a 867.1500,335,ffff,0
 a 868.2000,3e0,ffff,0.
```

(Again, ignore the extra latters) I can't garantee these are ALL the frequencies for each control channel since there is so little activity on those zones. Trunker doesn't find all the frequencies until they get used.

Hi,

I have wanted to get involved with shortwave for years and would like to get some recommendations on a mid-range ($200-400) receiver and antenna set-up. I plan on telescoping mast for shortwave, TV (mostly for uhf PBS stuff), and FM. The height restriction in our town is 50' but I imagine anything around 30' would produce good results since there are no big hills or trees nearby. In addition I own a newer 2.8 GHz PC running Windows XP for any recommendations on how I might incorporate this into the overall set-up.

Being inexperienced I am thinking I should start with simply listening with a capable mid-range receiver and then after some years time buy into a transmitter as well. This is all untutored preliminary thinking on my part and would welcome anyone's ideas as to how a beginner could best get started on the road to mid-to-high end shortwave/ham listening/broadcasting. I see this initial step as phase one of a two or three part program that will extend over a period of five or ten years.

Thank you for your help.

Steve

Note: I will be buying "Passport to World Band Radio" as a way of educating
myself on some of the issues I mentioned

Steve -- see receiver reviews and antenna projects at URL:
http://ac6v.com/swl.htm

Also a better place to post is rec.radio.shortwave

Good luck and DX

For around $400 you can get a used Icom IC-R75 and if you're thinking of
being a ham look at the IC-718, pretty much same Rx except no coverage above
30MHz. Yaesu FRG-7 is a decent analog Rx.

I purchased a new ft-857d. I haven't been operating lately so I don't know if another radio will exhibit the same problem, but this is strange.

When I transmit on 80m and sometimes on 40m, after releasing the mic, I can hear my signal, sometimes only about 1 second of the audio, sometimes more. So for instance, if I key up an speak "testing, one two three four", releasing the key, I hear "three four". The person I am speaking with doesn't hear it.

It can't be a propogation echo since it is too long. The radio doesn't have a recorder. It is almost like there is a repeater in the area. Something is definitely strange.

At one point last week, I heard the last 10 seconds or so of each transmission. I thought it was someone mocking or interfering with us.

I am going to hook up another radio and try it.

Anyone hear of something like this?

For about $400, you can buy any of the following on the used market
(ebay) without working too hard at it.

ICOM R70a
ICOM R71A
Icom R75 (cutting it close, but you can probably find one for less than
400)
JRC NRD525 (again, cutting it close, but on SSB it's the best of this
bunch). The best ergonomics by a mile. Needs an external speaker, dont
bother with the JRC ones, just use anything available, it will at least
equal the 525's matching speaker. This thing was almost 1200 bucks new.

Yaesu Frg7700 I would put this a notch below any of the above.
Yaesu Frg8800 This one too.

BDK

I'd like to have a 12v battery pack, using throwaway batteries, for extended field ops with my Yaesu VX-5R HT. I want to be able to operate without having a genny on hand, and throway cells of a standardized type allow me to say to Logistics "Uh, go gimme a raft of them thar D cells", simplifying my life in the process.

Anyone done this with either four pairs of D cells or a pair of 6v lantern batteries?

IIRC, IEC-type D-cells are normally designed to deliver 200mA, whereas the lantern batteries are designed to deliver 300 mA. Is that correct?

Many thanks for your helpful and on-topic advice.

Just returned from factory servicing. Four finals replaced and bias resistors balanced.   I got 500 watts out for about 20 watts in. Just to make sure you know it- MAXIMUM input on this amp is about 25 watts. Most folks try to pour the coal to it at 100 watts, and that will fry the transistors everytime, so make sure you back your drive down before turning the amp on.... the amp is rated for 500 watts out, so whatever drive it

takes to accomplish that, stop right there! On 10M and 12M, the highest you may see will be 450 watts. No band switching. Filter kit available or MFJ LP filter also available.
Great little light amp with single muffin fan (really quiet.)

$575.00 Shipped

I only got the first few characters which were "? CQ C"

The rest of it the spacing was rather poor, and couple that with the fact it sounds like a pissed off bumble bee in a mayonaise jar makes it difficult to decode.

Holy cripes! The whole message is ONE LARGE CHARACTER!!
This guy should have been shot. I like that, a bumble bee is just about
right...caught between the window and screen.

Seriously, REMEMBER that back then, the letter C was probably sent as
di-dit dit (.. .). Even though I hear the standard CQ up front, I heard
this 'C' in there and the word 'the' a few times.
I don't think there were other letters different, but there may also be
many abbreviations. His question mark (?), or what sounds like a question
mark, seems pretty readable.
Try asking the QCWA for some high speed CW op contacts. It's going to
take someone really good at CW to decode it. I also have the name & call
sign of an award winning high speed CW operator on the west coast (don't
remember it now - N7CFO should know him).

Its not fast, its just badly sent.
I had a cursory listen and made out a few bits but nothing intelligible.
Not sure if its really our morse code (continental code) or real morse.
If I have time tommorrow I will have another go.
Too many kids yapping in the background to do it earlier today.

Amateur Radio Newsline� Report 1392 � April 16, 2004

Amateur Radio Newsline report number 1392 with a release date of Friday, April 16th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Iraqi hams put out a plea to keep ham radio alive in that war torn nation and the ARRL asks the FCC to extend the filing deadline on B-P-L. Find out the details on Amateur Radio Newsline report number 1392 coming your way right now.

(Billboard Cart Here)

**

A PLEA FROM A WAR ZONE: PLEASE HELP HAM RADIO SURVIVE IN IRAQ

Even as the bloodshed continues, hams in Iraq are asking their counterparts world-wide to keep Amateur Radio alive in the war torn nation. Amateur Radio Newsline's Bruce Tennant, K6PZW has more:

--

A widely publicized e-mail from Laith Adhary, YI1SRA, in Baghdad asks the worlds radio amateurs for support in keeping ham radio a part of a new Iraq. This, as the June 30th date for handover of the government to local authorities approaches.

Adhary is a member of the Iraqi Association for Radio Amateurs and works at the University in Baghdad. He says that it is urgent that Iraq establish a viable ham radio program in the country before the shift of governing takes place. To accomplish this, Laith and Iraqi Association for Radio Amateurs president Diya Sayah, YI1DZ are asking hams around the globe to and their national societies to a letter of support for the future of the hobby in Iraq.

Both men indicate that this is a time sensitive issue and request support right away.

With thanks to Ian Abel, G3ZHI, for passing the information along,

I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio
Newsline.

--

The best way to make sure your letter of support arrives is to send it by E-mail   We have two addresses. Sayah can be reached at yi1dz@hotmail.com and Adhary is at laithtariq@yahoo.com. (G3ZHI)

**

THE BPL WAR: ARRL ASKS FOR FILING DEADLINE EXTENSION IN BPL NPRM

Back here in the United States, the ARRL has asked the FCC to extend the deadline for comments and reply comments by 45 days in the Broadband over Power Line Notice of Proposed Rule Making. Thats E-T Docket 04-37.

The ARRL filing says that it anticipates the National Telecommunications and Information Administration report on B-P-L to go public on or around April 16th. Also, that the current deadline would allow only a couple of weeks at best to evaluate the study's results and incorporate its findings into comments in the proceeding.

Although the FCC does not routinely grant such extensions, the ARRL says that it is important to allow time for the N-T-I-A to conclude its study at B-P-L field trial locations. Unless the extension is granted, the last day to file comments is May 3rd and reply comments is June 1st. (ARRL Bulletin)

**

THE BPL FIGHT: SWL'S VS. BROADBAND OVER POWERLINES

Short-wave listeners can complain to the FCC if a Broadband Over Powerline installation interferes with their reception, but there are some caveats. Amateur Radio Newsline's Gary Pearce, KN4AQ, has the
rest of the story:

--

Progress Energy has made a concerted effort to move BPL signals out of the ham bands in their trial areas near Raleigh, North Carolina. But the systems, which are governed by FCC Part 15 and are prohibited from interfering with licensed services, are still radiating signals across much of the rest of the short-wave spectrum. That's leading short-wave listeners to ask if they have "standing" to complain to the FCC, since they don't have licenses themselves.

The - General Council Chris Imlay W3KD says they do, if the BPL signals are interfering with international shortwave broadcasts from other countries, but not if they are trying to listen to domestic shortwave broadcasters. Replying to an e-mail inquiry, Imlay adds that "One does not have to be a licensee of a transmitter in order to receive harmful interference."

ARRL Chief Executive Officer David Sumner K1ZZ noted that the US is a member of the International Telecommunications Union, whose Radio Regulations require member nations to protect HF communications from harmful interference.

RR 15.12 reads, "Administrations shall take all practicable and necessary steps to ensure that the operation of electrical apparatus or installations of any kind, including power and telecommunication distribution networks, do not cause harmful interference to a radiocommunication service operating in accordance with the provisions of these Regulations."

Reporting for Newsline, this is Gary Pearce KN4AQ, in Raleigh, North Carolina.

--

The bottom line: If you are trying to listen to Radio Netherlands and a Broadband Over Powerline installation covers the station up -- complain to the FCC. (KN4AQ, ARNewsline(tm))

**

HAM RADIO IN SPACE: EXPEDITION 9 HEADED TO THE ISS

The International Space Station's next set of ham radio residents will arrive this month. Expedition 9 Commander Gennady Padalka and Flight Engineer Mike Fincke are slated to launch to orbit from the Baikonur Cosmodrome in Kazakhstan on April 18. They will arrive at the I-S-S on April 21 to replace Expedition 8 explorers Mike Foale, KB5UAC, and Sasha Kaleri, U8MIR.

Padalka is a space flight veteran having spent 198 days aboard the Russian Mir space station in 1999. On the other hand, Expedition 9 is Fincke's first trip to space. Both are hams. Fincke holds the call sign KE5AIT and Padalka is RN3DT.

European Space Agency Astronaut Andr� Kuipers will also travel to the Station with Fincke and Padalka and return to Earth with Expedition 8 about nine days later. Padalka and Fincke will then spend about six months on-orbit. Their tasks include maintaining ISS operations, continuing science operations, conducting two spacewalks and operating the ham radio station as time permits. Their tour of duty is scheduled to end in late October when the Expedition 10 crew rockets up to replace them. (ANS, ARISS, MAREX)

RESCUE RADIO: PHONE TUNNEL FIRE BRINGS HAM RADIO CALLOUT

Raynet -- the United Kingdom's version of RACES -- was called on as March drew to a close. This, as fire rips through a tunnel carrying telephone lines across a wide area. Jeramy Boot, G4NJH, is in Nottingham, with more:

--

Raynet groups in Cheshire, Greater Manchester and Derbyshire were put on standby following a fire in a BT underground tunnel in central Manchester in the early hours of Monday the 29th of March. The fire disrupted more than 130,000 telephone lines in Lancashire, Merseyside, Derbyshire and further afield. Cheshire Police were concerned about the effects on communications, and via the Cheshire Emergency Planning Department requested the availability of Raynet operators to cover the affected area.

The Greater Manchester ambulance service lost landline and radio communications with their vehicles, but were able to use mobile phones as a means of contact. Other difficulties included a loss of 999 calls and disruption to the broadband data network. Large areas of the High Peak area of Derbyshire were without landlines or mobile phones.

Jeramy Boot, G4NJH.

--

The majority of Raynet members were dismissed by the evening of March 29th, but the Cheshire Group and County Controllers were on call through Wednesday afternoon the 31st. Thats when the emergency call in 999 service was finally restored to the worst-affected area of Cheshire. (GB2RS)

**

RESCUE RADIO: TV CHANNEL 16 GOES TO PUBLIC SAFETY AGENCIES IN NYC

On this side of the Atlantic pond the FCC has permanently reallocated 482 to 488 MHz in the New York City metropolitan area to the land-mobile service. This, for public safety communications.

482 to 488 MHz which is also known as UHF television Channel 16 has been used in New York for that purpose since 1995 when the FCC issued a Conditional Waiver of its rules to permit the initial operation.

The entire story is on-line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-80A1.doc
(CGC)

**

RADIO RULES: BY-BY FORMS

And a change of forms at the FCC. Effective with Monday, May 3, the Wireless Telecommunications Bureau will dismiss any applications filed on an FCC Form 605 issued earlier than December 2003.

Form 605, the Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Service, is the hard-copy version of the Amateur Service application. The FCC has been accepting both older and current Form 605 applications that included room for a Taxpayer Identification Number or a Social Security number. The FCC would then issue the applicant an FCC Registration Number or F-R-N without additional paperwork.

All amateur service applicants must have and use an F-R-N when filing an application such as Form 605 with the FCC. The change does not affect applicants filing on-line with the Universal Licensing System. (ARRL Bulletin)

**

ENFORCEMENT: NEVER UNDERESTIMATE THE VALUE OF CB RADIO

Turning to the enforcement arena, never underestimate the value of an 11 meter Class D C-B radio set in catching a bad guy. Even when the alleged perpetrator happens to be the C-B operator at the controls. Bill Pasternak, WA6ITF, has the details:

--

According to the CGC Communicator, complaints about interference from a citizens band radio led police to the home of one Vernando Malone of South Bend, Indiana. When they searched the premises they found more than $20,000 worth of Nextel cellular telephones and another $20,000 in Motorola phones. Also located was a computer that Malone allegedly used to activate the phones

Malone has now been charged with forgery and theft. This, in connection with what police claim was scheme to fraudulently order large numbers of cell phones, activate them with a home computer, and then sell them on the street at discounted prices.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in
Los
Angeles.

--

Stamp this one 10-4 good buddy. And if you want to read more, its on-line at http://tinyurl.com/ytb3z (CGC)

**

NAMES IN THE NEWS: W4RWG ELECTED PRES OF SERA

On a more positive note, Repeater Journal reports that Roger Gregory, W4WRG, has been elected as the new President of the giant South Eastern Repeater Association for 2004 through 2005. Gregory replaces Don Williams, W4VT, who has served in the post for the past six years.

The South Eastern Repeater Association -- better known as SERA Incorporated -- is one of the nations largest repeater coordination umbrella organizations providing service to Georgia, Kentucky, Mississippi, the Carolina's, Tennessee, Virginia and West
Virginia.
It also publishes the Repeater Journal magazine four times a year.
(SERA)

**

CONFERENCE: THE DCC IN IOWA IN SEPTEMBER

The 2004 joint Tucson Amateur Packet Radio and ARRL Digital Communications Conference will be held September 10th to the 12th. The venue this year is the Airport Holiday Inn in Des Moines, Iowa. More on the conference is on-line at www.tapr.org/dcc/. (TAPR)

**

CELEBRATIONS: OARC AS K4H IN MAY

The Owensboro Amateur Radio Club in Western Kentucky will celebrate its 50th anniversary as an ARRL affiliated club. This, by using the special event call sign K4H. K4H will be valid for all club members to use both mobile and from their home station location from May 15th through the 31st.

By the way. Only two members of the Owensboro Amateur Radio Club are still is here from its formation. They are Max Douglas, W4VJV and Jim Rush, W4EWL. Both are were instructors at early Amateur Radio classes run by the club. Also, W4EWL has three "QST Cover Plaque" Awards over the years. (Via e-mail)

**
BREAK 2

This is ham radio news for today's radio amateur. From the
United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

TECHNOLOGY: KNRC AM IN COLORADO TURNS OFF IBOC

A broadcaster has shut down its A-M stereo system to avoid interfering with listeners of another near-by station. KNRC A-M on 1150 kHz in Littleton, Colorado, turned off the I-B-O-C or High Definition Radio encoding equipment in response to listener complaints of interference to the signal of KJJD, on 1170 kHz in the town of Windsor.

Rodger Tighe writing in the CGC Communicator calls this is a second adjacent channel situation. He reports that part of the decision to silence I-B-O-C was based on the thinking that interference to a small mom & pop station like KJJD was totally unwarranted since consumers have so few H-D radios in their hands at this time.

Tighe is the Chief Engineer of KNRC. He says that the I-B-O-C encoding equipment is still in the racks and the whole issue could be revisited at a later date. (CGC)

**

CONVENTIONS: THE NAB HAM RADIO RECEPTION IN LAS VEGAS NV. APRIL 21

A reminder that this week, on April 21st is the National Association of Broadcasters `Amateur Radio Reception'. This years `Ham Radio Reception' will be hosted by Heil Sound, Limited and its well known owners Bob, K9EID, and Sarah Heil. They would like to invite any and all amateur radio operators who will be in attendance at the NAB show to join them for this annual fun event.

Audio Only: Hear it at http://www.arnewsline.org
--

This years NAB Ham Radio Reception takes place Wednesday April 21st, from 6 to 9 P.M. local time. The venue is the Las Vegas Hilton Hotel, Ballrom B. Of coarse, thats in Las Vegas, Nevada. For more information please feel to contact Bob or Sarah at 618-257-3000 or by e-mail to bob@heilsound.com. The Heil's say that they hope to see you there. (ARNewsline(tm))

**

WORLDBEAT - ALBANIA: FIRST DX COM JUNE 19-20

Turning to news from around the world. Datline Albania where that nations hams will hold their first DX convention this spring. The dates are June 19th and 20th in the city of Tirana.

The actual DX convention will begin Saturday afternoon, concluding with a gala dinner and Sunday morning program. Sightseeing tours of the region will be available on Sunday afternoon. More information will be posted on line at www.za1a.com in the near future. (OH2BH)

**

WORLDBEAT - JORDAN: UK HAMS PLAN VISIT

Robin Bellerby, GM3ZYE, is in the early stages of planning an amateur radio trip to Jordan. The excursion will take place either in May or September of 2005 and will be mainly - but not exclusively - for members of the United Kingdom's Royal Signals, Royal Naval, and Royal
Air Force Amateur Radio Societies. Between 20 and 60 people are expected to make the trip. (GB2RS)

**

RADIO RECORDS: 2413 KM on 70 CM

Congratulations to ZL1AOX and VK3EK for extending the Trans Tasman 70cm distance record. On the 3rd January the two made a path of 2,413 Kilometers using SSB. The previous record was set on January 13, 1998 when ZL2TPY and VK4ZSH conversed across 2402 kilometers on the 432 MHz band. (NZART)

**

DX

In D-X, JE3MAS is in Tanzania for one year and will operate as 5H3HK. QSL as directed on the air.

And the multi-operator T33C DXpedition to Banaba island started on schedule on the 4th of April. The island counts as OC-018 for the Islands on the Air awards program. (Various DX sources)

**

THAT FINAL ITEM: WORLD CLASS T-HUNTING - PART 1

And finally, a question. Have you tried ham radio's version of fox hunting? It's not hard and you might win yourself some medals. Newsline's Joe Moell K0OV has the story of the next Amateur Radio direction finding championships:

--

Most hams know that in Amateur Radio, the term "foxhunt" doesn't have anything to do with horses or hound dogs. Our foxes are radio transmitters and the object of the hunt is to find them with radio direction finding equipment. But what many hams don't know is that the equipment for hunting radio foxes can be very simple and inexpensive. For a two-meter foxhunt in the park on foot, you can do very well by augmenting your handi-talkie with a simple yagi antenna made out of a steel measuring tape and some PVC pipe from the hardware store. For closing in, build an offset-type RF attenuator for about 15 dollars worth of small parts. Plans are on the Web, so warm up your soldering iron. Then maybe you could be like Newsline's Young Ham of the Year Jay Thompson W6JAY, who has won a place on our country's team to the World ARDF Championships. You don't have to be a super-athlete, just reasonably fit.

To see the USA's best on-foot foxhunters in action, to learn from them, and to try it for yourself, make plans to come to southern California this June. The Fourth USA ARDF Championships get under way on June 16th, with practice sessions, a big two-meter hunt, and another hunt on 80 meters. Come out the weekend before, and you can take part in an optional intensive training camp. It's all being put on by the Santa Barbara Amateur Radio Club and it's open to anyone at any foxhunting skill level, with or without a ham license. If you're a senior, don't worry about trying to compete with W6JAY. Equal medals will be awarded in five separate age category for OM's from under 18 to over 60. There are four similar age categories for the YLs.

For everything you need to know about the Championships, including schedules, registration forms and equipment ideas, point your Web browser to www.homingin.com. That's HomingIn, as one word, homingin.com. I hope to see you there. Next week, I'll tell you about a way to get the foxhunting fun going in your own home town. From southern California, this is Joe Moell Kay-Zero-Oscar-Victor for Amateur Radio Newsline.

--

More with Joe in Next Weeks Amateur Radio Newsline report.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, and I'm Randy Damron, N8XEA, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Jon,

Had the same problem on a Drake...problem was a frequency drift caused
by voltage regulator...problem also associated with power supply. The
caps also can cause a voltage drop...also replaced mine...These two
fixes solved the problem. Freq drif was in/out of alignment
points...so power seemed to be low then high when drift took the dreq
back into passband it was aligned for (when not drifting.)

Luck

Joe

Hi

Anyone got any working 8875's bottles they want to part with ?
Or 8874's / 8877 's ?

Adrian

I have the 50 foot tower, it is right outside the shack window, so will be drilling the two small holes in the sill, then fishing through approximately 12" or 18" then replace the spacers to keep the distance between the leads constant. That leaves the remaining 98 feet outside of which I need a distance of approx 35 or 40 feet of the ladder line to reach my center fed 80m or two wires 66feet each leg. What are my options with the left over 50 feet (approx) of ladder line? Coil it up? Cut it? And what are the rules about keeping the ladder line away from the tower and steal guy wires that are not insulated? I only want to do this once now and first time using the ladder line, all suggestions appreciated, thanks.....

ICOM-751 dead, help

I was using my radio just fine, than I unplugged it and moved it a few feet
and now it is almost dead. I can hear a relay engage when I first turn it on
and fall off about 10 seconds after I turn it off.
What happened?

Cut any unneeded line off. You can NOT "coil up" ladder line. Keep it away from all other metalic things by about the spacing between the two wires as a minimum. If the wind can swing it into the tower or other things, use insulating spacers of some type where needed.

There are center insulators with a mechanical hook-eye to support the center You may also want to provide some strain relief at the point where you connect it to your dipole wires (rather than just rely upon the soldered junctions). Others on the MG may have suggestions.

Hi folks

I want an auto ATU for my IC706. Icom list this item as the AH-3, but I know
there are other companies which make cheaper options, Alinco for example.

If you have such an item spare, please let me know.

cheers
Jack

Hi Jack

Check out the LDG tuner,

\http://ldgelectronics.com/rt-11_description.html

I have one hooked to my 706IIG and works fine.

SGC also makes one,

http://www.sgcworld.com/products/239/239.html

Of course Icom has the AT-180, kind of pricey though and it has a much narrower tuning range than the LDG or SGC.

I'm sure there are others which i don't know about.

I think the current AH-4 is the replacement for the AH-3. The AH-4 seems
to work fine with my IC-706MkIIG, but they're not cheap even in the USA,
and probably still more in VK.

I recently purchased an Icom 730 HF radio. This is my first HF rig evn though I have had my Extra class license for about 2 years now. I noticed on the Icom web page that there are several preventative maintence tasks that they recommend performing on the IC-730 due to the age of these rigs. I am looking for anyone that may have performed these tasks on the IC-730 that might be able to give me a basis walk-through of how I need to go about taking the panels off the radio to gain access to the RF unit in the radio. Here is what is listed on the Icom web page that they reccomend doing to the radio:

1.) On the RF unit, resolder the J2 and J3 connectors. Due to the relatively thick coax cables on the connectors, these solder joints tend to crack with age and cause intermittent transmit and receive problems.

2.) Make sure the receiver preamp works. If inoperative, replace relay RL1 on the RF unit. Install the factory update to prevent relay failure.

3.) Check transistor Q5 on the RF unit. If it is a 2SC945Q, replace it with the improved 2SC2878B to prevent spurious output from the transmitter and failure of the driver transistors. If Q5 is a type 1636, it doesn't need to be replaced.

4.) Clean the RIT pot and switch with tuner cleaner. These controls are usually noisy and erratic, making the RIT hard to use.

5.) Tighten the chrome-plated PC board mounting screws. The screws and spacers tend to come loose if the radio is used in a high-vibration, mobile environment. Don't forget to tighten the screws on the logic and IF units located beneath the main unit.

6.) Check the bandwidth coupler for proper tightness.
Tighten as needed.

I'm sure the first step of re-soldering the J2 and J3 connectors on the RF unit I can probably handle if all this involves is desoldering the connectors and resoldering them. I'm not so much concerned about the receiver preamp working, but does anyone know if Icom still stocks parts for the Icom 730? The third step reccomends swapping out the Q5 transistor on the RF unit if it is a 2SC945Q transistor and replacing it with a 2SC2878B transistor to prevent spurious output from the transmitter and failure of the driver transistors. How hard would it be to replace this transistor? I would assume it would involve desoldering the transistor and replacing it with the new transistor. Would I just need to get a 2SC2878B transistor and some heat sink compond to replace this transistor? Where would get the 2SC2878B transitor? Can I order one for Mouser, or would this have to be ordered directly from Icom? Step 4 involves cleaning the RIT pot with some tuner cleaner, probably the easiest step. How do I locate the RIT borad to clean the pots? I would assume here too that all I need to do is to spray a shot of contact cleaner in the holes of the pot and switch on the RIT unit? Step 5 reccomends tightening all of the screws on the PC board. Hopefully I can handle this step if I can get access to all of the srews to tighten them. Step 6 reccomend checking the bandwith coupler for proper tightness and retightening it if needed. Where is the bandwidth coupler located inside the radio? What tools would I need to tighten it?

I thought I would post these questions on the newsgroups to see if anyone that is a little more technical-minded than me could walk me through performing these tasks. I have downloaded an instruction manual and service manual for the IC-730, but I thought maybe someone who might have a 730 and has performed these tasks could tell me how do them a little easier. The last thing I want to do is screw up a good radio. Thanks for reading my long post. Please e-mail me if anyone can help me out with this. Thanks!

73,
Mike KU4UV

Subject: CW beta tester needed
Message-ID: <20040427184015.26462.00000530@mb-m07.aol.com>
Xref: archiver1.google.com rec.radio.amateur:6719

I have a unique opportunity for an avid CW operator who would like to volunteer their time as a beta tester for a new distinctive electronic keyer. The keyer is designed for comfort, smooth operation and simplicity. To my knowledge nothing like it is available in its entirety on the market today. This really is a one of a kind keyer.

I seek only one CW operator, to whom I will ship a prototype unit (no cost to you) for use over the next few weeks. All I ask is you put it through the pace and with an open mind critique its usability.

You must meet the following qualifications:
A) Ham operator.
b) Be highly proficient at CW.
c) Active CW operation for a minimum of 12-15 hours during the beta period.
d) Comfortable with an iambic form of an electronic keyer.

You will be required to sign a non-disclosure and non-competitive form.

In return for your efforts I provide you, free of charge, one unit when the final configured design is complete.

I have used this (my) design over the last few months and find it to work perfectly. However, and sadly, I am not an avid CW operator and limited in putting it through it's speed and performance paces.

Further details will be sent to those who email me with interest and details of your operating skills and time spent.

Please feel free to ask questions. I hope to release the product in the next few months based on feedback.

Those interested in product information and release may also email me and will be notified of special pricing just prior to its full release.

Thank you.

Hi,

Can anybody help me identify a filter found in a Macom GPS antenna ?

The part is marked: 1575SA2 and CSS705.

Any help would be appreciated.

I believe that it is a 1.575 GHz saw filter.

Thanks in advance,

John Barnes

I am looking for an article from May 1983 titled "Harry's Hams". Does anyone have a copy of this magazine that is willing to scan it and send it to me?

I know the ARRL has it available for purchase but I would prefer to find another method that to actually pay for it. Any help would be appreciated.

It was cracked, I am repairing for my neighbor. The unit works fine,
receives trunked and conventional perfect, just has lost the bottom line.
I am actually surprised it works at all (the LCD), the crack is substantial.

I have a new MAGELLAN Meridian Platinum GPS. Complete in box with all paper work firmware update cd rom version 4.06. Programming cable. 256 meg SD RAM memory card. Mapsend US version 4.20. All is inmint condition. Like new less than a month old. Over $500.00 invested. Looking for a Kenwood TM D700 on trade or other dualband mobiles Handhelds. Make me on offer. Please contact direct via email. rs016927@comcast.net
THanks David   (pics avail upon request)

        Hi, all.  Does anyone have a programming cable for a Vertex
FTL-2011?  I
cannot find it anywhere, and there are no dealers near me.  Thanks.

Please reply to k5ahh@arrl.net

Amateur Radio Newsline(tm) Report 1394 - April 30, 2004

A Very Important Note: We urge all readers of this report to also download the audio version of this report at http://www.arnewsline.org/quincy and listen to it. Please pat special attention to the words of ARRL President Jim Haynie, W5JBP, and the urgency in his voice as he discusses the latest developments in the fight to keep Broadband Over Powerline technology from encroaching into the Amateur Service bands. There is no way to express in print the very grave nature of this situation. Only by listening for yourself can you truly understand the extreme gravity of the circumstances that our service faces if BPL is introduced nationwide.

The ARNewsline Production Team

Amateur Radio Newsline report number 1394 with a release date of Friday, April 30th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL takes on the White House over BPL, a power provider says BPL interference to mobile operations has to be tolerated and a ham radio name change. Its called the Dayton Hamvention once again. Find out the details on Amateur Radio Newsline report number 1394 coming your way right now.

THE BPL FIGHT: PRES BUSH VS. PRES HAYNIE AND THE ARRL

The ARRL and its president has expressed what they call deep concerns about a speach by United States President George Bush. One where where the leader of the free world says that standards need to be changed to encourage the delivery of Internet access using Broadband Over Poweline technology. Amateur Radio Newsline's Mark Abramowicz, NT3V, is here with more:

--

In the boldest and most dramatic move yet in the BPL debate, the ARRL's president Jim Haynie W5JBP, directly appealed to President Bush to abandon his support for BPL technology.

Haynie says Bush's speech last week during the American Association of Community Colleges convention in Minneapolis prompted him to action. In that speech, President Bush stated directly:

"...power lines can be used for broadband technology. So the technical standards need to be changed to encourage that."

"I faxed a letter to the White House cause I wanted to make sure they got it and we followed it up again with the regular U.S. Mail," Haynie says. "And, it'll be curious to see what kind of reaction that we get. I think, like I said, it's ill-advised.

"It's so much hype that the broadband industry has been putting out and I'm sorry to say it looks like the president has been suckered into it a little bit."

Haynie says amateur radio has reached a defining moment in its history and he is issuing a call to arms.

"This is the time that amateur radio is going to have to pull together and speak with one big voice," Haynie says. "And, on our website, we put the contact information and I want everybody to go there and look at it (www.arrl.org) and you can write the president, you can write your congressman, you can write your senators you can call 'em.

"Anything like that is helpful because amateur radio has been around for a lot of years and I'd hate to see it end based on a technology like this that any engineer worth their salt would be able to say, 'Well, this sounds fun but it's just not going to work.' "

Haynie says he wasn't blind-sided by President Bush's remarks, but has questions about his fellow Texan's true understanding of the issue.

"If you go back and read his speech he made in New Mexico, I think it was Albuquerque, he alluded to broadband then just as a general term," Haynie says. "Since that time, the actual term broadband over power line has come into his speech and I know he doesn't write his own speeches, other people do."

Haynie says its likely Bush administration advisers believe BPL is an issue that may have some mileage.

"This is an election year and anything that would seemingly stimulate the economy and create jobs is going to be a real political football and this has just got caught up in it," Haynie says.

Haynie says he is now working with the ARRL's Washington staff to arrange a personal meeting with President Bush to lay out the issue for him. And Haynie says he's hopeful that if Bush sees the damaging effect BPL has on radio spectrum - occupied not by just amateur radio - but police, fire, and government services - he may reconsider.

Haynie says he'll also go in with the findings of the National Telecommunications and Information Agency - the president's own advisory arm on radio frequency spectrum management - to make his case.

"When you get into the actual and engineering report, there's some good stuff there," Haynie says. "And I'm glad to see it. I'm also glad to see that they corroborated a lot of stuff that we said in our data.

"And, it gives us more credibility because NTIA has quoted ARRL in there a number of times in this report. But some of their measurements were even more - for lack of a better word - devastating to the industry than ours. They're talking as much as 200 meters. That's a long way!"
Haynie says BPL threatens the future of amateur radio as we know it and it's time to step up and be counted:

"I've been a ham for 32 years, 33 years or something like that and this is the worst, most difficult situation I've ever seen amateur radio in," Haynie says. "And I think whether you're interested in licensing restructuring or you're interested in somebody not identifying every 10 minutes on 75 meters or whatever the case, that all pales. It is insignificant to this particular issue.

"So we need to set all these differences aside in the amateur radio community and come together. This is the time."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Since before the first test installations went into operation, the ARRL has been warning the public about the potential for massive radio disruption to vital radio communications that BPL has the potential to cause. More information is on line daily at the ARRL website at http://www.arrl.org (ARNewsline(tm))

**

THE BPL FIGHT: NTIA RELEASES ITS BPL IMPACT REPORT

The National Telecommunications and Information Administration has issued its long-awaited report on the interference potential of Broadband over Power Lines. Despite a generally-glowing news release, the report itself identifies significant interference risks from BPL and concludes that the methods currently used for measuring BPL noise levels are inadequate and that more study is needed on such areas as ionospheric propagation of BPL signals.

The full report may be downloaded, either in full or chapter by chapter,from the NTIA website at http://www.ntia.doc.gov/new.html (CQ)

**

POWER PROBLEMS: INVESTIGATION INTO BLACKOUT FAULTS ENERGY COMPANIES

Power companies may be interested in reeping huge profits by selling high speed Internet access using BPL technology, but a report says that they disregarded voluntary rules that were intended to ensure the flow of electricity. This is what opened the way for last summer's blackout in eight states and Canada, the report says.

The investigators who prepared the report say that there was a clear understanding long before the blackout last August that the Ohio region was highly vulnerable to power distribution grid instability. Ohio is where the problem began.

The report continues that had the situation been properly addressed, the cascading blackout that sped across states from Michigan to New York and into Canada probably would have been averted. In fact, investigators said that something as simple as shutting off 200 megawatts of power an hour prior to the blackout might have kept the problem from spreading.

This is the final report by investigators who looked into the cause of last summers electrical breakdown. They are urging Congress to impliment strict government standards to ward off future outages. (Published reports)

THE BPL FIGHT: NC POWER COMPANY MAKE INTERFERENCE CLAIMS

Meantime, a North Carolina power company says that the interference coming from its BPL system is not harmful to ham radio operations. As reported last week, Progress Energy claims it has solved almost all of the problems to the Amateur bands created by its test installation near the city of Raleigh. But local hams have a different view. Newsline's Gary Pearce, KN4AQ, takes an in-depth look at the claims being made by Progress Energy and what the ham radio community has to say:

--

The FCC has received its first reply from a BPL system operator to a complaint about BPL interference. Progress Energy, which operates three BPL trials near Raleigh, North Carolina, says that they are in full compliance with Part 15. Their letter attempts to set a mark for "harmful interference" to home stations, and makes a claim that BPL doesn't cause harmful interference to mobiles because they drive by so quickly.

When the Progress Energy trial began in January, Amperion, the equipment vendor, set the hardware up with signals on the overhead lines that covered the 10 and 12 meter ham bands, and most of the spectrum in between. The signals appear as a series of carriers, 1.1 kHz apart, covering 6 MHz of spectrum for each 2000 feet of power line.

Hams complained to the FCC, and Amperion moved the spectrum used. They attempted to operate in spectrum between the 20 and 15-meter bands, with a notch blocking BPL signals across the 17-meter band. They missed the mark a little, with BPL signals starting at 14.3 MHz, 50 kHz inside the 20-meter band. And while the notch at 17 meters did reduce the signal strength, the BPL carriers were still audible, and might be heard by home stations for a block or two, if there were any hams living in the trial area_ but there are no hams living there.

In addition, the BPL signals don't end with a "brick wall" filter at the edge of their spectrum block. They trail off slowly. And those "fringe" signals were still falling inside several ham bands, again expected to be audible to a ham within a block or two of the power line.

After giving Amperion time to correct the apparent errors, hams complained again to the FCC. The result was a meeting between Raleigh hams and a Progress Energy engineer in the trial area on April 6th to review the complaint and the spectrum used. Bill Godwin, the Progress Energy engineer, had arranged to be able to talk to an Amperion technician to make adjustments to the spectrum used in real time - but, the technician was a no-show on the telephone.

On April 13th, hams checked the spectrum used again, and still no changes had been made.

On April 20th, Len Anthony, Regulatory Affairs attorney for Progress Energy, sent e-mail to the James Burtle, Chief of the FCC's Experimental Licensing Division, claiming that after moving the BPL signals off the ham bands, their system "is not causing any harmful interference and is in full compliance with the FCC's Part 15 rules."

Referring to the April 6th observation with Bill Godwin, Anthony says, "These tests revealed a small level of interference at the fringes of certain frequencies. Since that time, further modifications have been made to address this fringe interference. It is Progress Energy's position and interpretation of the FCC's rules with regard to `harmful interference' that any interference that may still exist is not `harmful' as that term is defined by the FCC's rules. This level of interference does not seriously degrade ham radio operation or transmissions or cause repeated interruptions. Importantly" he continues, "since Progress Energy can make modifications to completely eliminate any interference with fixed ham operators, the only impact of any kind upon ham operations is upon mobile operators."

As for mobiles, Anthony continues, "Given that any interference experienced by a mobile operator only occurs within close proximity to the BPL facilities, such interference would be very short lived. Thus, Progress Energy is not causing any harmful interference and is in full compliance with the FCC's Part 15 rules."

An observation of the trial area on April 21st, the day after the e-mail was sent to the FCC, revealed that there had been no changes to the spectrum used. The overhead line was still emitting a full-strength signal on the top 50 kHz of the 20 meter band; signals were still audible in the notch at 17 meters, and the "fringe" carriers were still encroaching on the bottom 50 kHz or so of the 15 meter band.

This is the first claim by a BPL operator that weak BPL signals do not create "harmful" interference by the FCC's definition, interference that "seriously degrades, obstructs or repeatedly interrupts a radiocommunication service." Ham operators, of course, routinely tune through quiet spectrum looking for weak signals, and a series of carriers one kHz apart covering the band might be considered to seriously degrade, obstruct or repeatedly interrupt that activity.

And a mobile driving 35 miles per hour along a BPL-carrying power line can be in the interference zone for a minute or more - and much longer in stop-and-go traffic, waiting at signal lights, or stopping in a driveway or parking lot.

Frank Lynch W4FAL, an ARRL Technical Specialist for North Carolina who has been concentrating on the Progress Energy BPL trial, says that he will be filing another complaint with the FCC, responding to the Progress Energy e-mail. He also says that hams are not opposed to BPL per se, just the interference it causes. And he notes that it should be easy to clear up interference in a small trial area. It's BPL signals buzzing around every power line in town that have him worried.

Reporting for Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

Once the new interference complaint is filed it will be up to the FCC to investigate it and to take whatever action it deems necessary. (ARNewsline(tm), KN4AQ)

**

RADIO LAW: PETITION TO PROHIBIT BUSINESS COMMUNICATIONS ON FRS FAILS

A Petition for Rulemaking to prohibit daily business communications in the Family Radio Service has been dismissed by the Commission. Amateur RadioNewsline's Bruce Tennant, K6PZW, has more:

--

On August 22, 2002, the Industrial Telecommunciatons Association, Inc. -- or ITA -- filed a petition for rulemaking requesting that the Commission amend Section 95.401(b) of the Commission's Rules. This, to prohibit daily business communications on the Family Radio Service frequencies.

In making its case for the prohibition the ITA said that it was concerned about the unlicensed mix of business and personal users. The ITA said that traditional businesses were using FRS units for daily business needs and thereby limiting the ability of others to engage in the personal communications that the Commission envisioned for FRS.

One of those challenging the ITA petition was the Personal Radio Steering Group. This is an advocacy group for General Mobile Radio Service users who share part of the spectrum with the Family Radio Service. According to the PRSG filing, the FCC specifically indicated in the Regulatory Flexibility Analysis for creating the Family Radio Service that small businesses may use the FRS to conduct their affairs. Also, while FRS congestion does exist in and near sports and recreational facilities, theme parks and shopping malls, little of this congestion is attributable to recurrent business or commercial communications.

Based on this and other information provided by the public, the FCC has concluded that day to day business communications is a valid use of the Family Radio Service. That this was intended in the Report and Order creating the service and that there is little merit to the Industrial Telecommunications Association rules change request.

Reporting for the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

In other words, it is okay to continue to use FRS channels for routine business as well as personal communications needs. The full story is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1035A1.doc (CGC, FCC)

ENFORCEMENT: OFFERING NON CERTIFIED CB'S FOR SALE BRINGS CITATION

The FCC has gone after yet another purveyor of non certified CB radio gear capable of operating in the ham radio bands. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "The FCC's Altanta Office has issued a citation to Jim Norton, the owner of CB Sales and Service in Anniston, Alabama for the sale of non certified CB equipment. Noted in the citation were six different models of non certified exquoipent, five of which had been modified to transmit on Amateur frequencies."

--

The FCC alleges that an investigation by its Atlanta Office revealed that on March 11, 2004, Norton offered for sale at his retail store up to eight models of non-certified Citizens Band transceivers all bearing the Galaxy trade name. According to Commission's records, none of these devices have received an FCC equipment authorization which is required for Citizens Band transmitters marketed in the United States. CB Sales was charged with violation of Section 302(b) of the Communications Act, and Section 2.803(a)(1) of the F-C-C's Rules. (FCC, RAIN)

BREAK 2

This is ham radio news for today's radio amateur. From Auckland, New Zealand and the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESCUE RADIO: CA HAMS SUPPOERT MS WALK

Members of the Huntington Beach California Radio Amateur Civil Emergency Service supported the early morning 2004 MS Walk event on Sunday April 18th. The Huntington Beach volunteer radio operators were on hand at each rest stop along the five and 10 kilometer courses, to provide communications and assist state beach rangers and event management in case an emergency occurred.

There were over 1200 walkers on the beach path taking part in the fund raisuing event. Peter Shores, AD6TN, brought his communications van that is fully equipped with communications gear and emergency supplies. It served as a mobile command post. Another volunteer patrolled the entire course on bicycle.

The communications effort continued until about noon. There were no incidents or injuries reported during the event. (KH6WZ)

**

HAMVENTION NEWS : DARA RETURNS TO THE DAYTON HAMVENTION NAME

When thousands of hams return to Dayton, Ohio for Hamvention 2004, they will find that the "Dayton" has returned to the Hamvention. This, with word that the Dayton Amateur Radio Association which sponsors the yearly event has again remamed the gathering the Dayton Hamvention.

According to General Chairman Gary Des Combes, N8EMO, the change is in keeping with the Hamvention's 'going back to the future' theme. It also goes along with the pledge made to return Hamvention to its roots as the biggest and friendliest hometown hamfest, found anyplace in the world.

Des Combes says that for more than half a century the event has been known to the world, and to the world of Amateur Radio as the Dayton Hamvention. He says that Hamvention's ties are to the entire Dayton metropolitan area, to its economy and to the ham radio community of the region.

The 33rd annual Dayton Hamvention opens on Friday, May 14th and runs until Sunday 16th. During those three days the event is expected to draw about 25,000 people from around the world and bring millions of dollars of sales and business to the Dayton area. (Dayton Hamvention)

**

HAMVENTION NEWS: THE HAM RADIO TOWN MEETING

And since we are talking the Dayton Hamvention, let me take a moment to invite you to join our producer Bill Pasternak, WA6ITF, and an all-star group of guests as we take a trip through time to look at the "traditions" that have made Amateur Radio the great hobby and service that it is today. This, as we at Amateur Rasdio Newsline present the 6th annual Dayton Hamvention "Ham Radio Town Meeting."

This years topic is "IT'S MORE THAN RADIOS -- Keeping The Traditions of Amateur Radio Alive." Bill will be your host and moderator. Joining him will be a whose who group including our leynote speaker Bob Heil, K9EID, of Heil Sound Ltd. Other presenters include Radio School's Gordon West WB6NOA, Worldradio Magazine Editor Nancy Kott WZ8C, Producer/Director Dave Bell W6AQ, Philadelphia newsman Mark Abramowicz, NT3V, to name only a few. Also, if time permits, we will present a screening of the 1990 Icom produced motion picture titled "More Than Radios." This is the story of an "old time ham" who rather reluctantly becomes the Amateur Radio "Elmer" for a teenager thrust into his life on summer.

The festivities begin at 1 P.M. EDT on Saturday, May 15th in Hara Arena Meeting Room 3 and as usual we will have lots of door prizes. If you have the time, we promise you a most entertaining and illuminating two hours reliving the traditions of the hobby and learning that being a ham truly is a lot more than radios. (ARNewsline(tm))

HAM RADIO IN SPACE: CREW CHANGE ON THE ISS

For a time last week there were five astro-hams on board the International Space Station. This as Expedition 9 crew members Mike Fincke, KE5AIT, and Gennady Padalka, RN3DT, arrived at the space outpost on April 21st The trip was made to the Iss using a Russian built Soyuz launcher.

Making the voyage with them was European Space Agency explorer Andr, Kuipers, PI9ISS. The three joined Expedition 8 crew members Mike Foale, KB5UAC, and Sasha Kaleri, U8MIR, who along with Kuipers are on their way back to Earth as this newscast goes to air.

Kuipers may have only spent a bit more than a week on-orbit, but he wasted little time in getting on-the-air. PE1SCW in Deventer in the Netherlands reported hearing PI9ISS in QSO with PI9ESA at 7:50 hours UTC on Saturday May 24th. Bas says that Kuipers signal was very strong signal that was reading 40 db over S-9. A few minutes later Kuipers was in range of Francisco Costa, CT1EAT, in Beja, Portugal. He said that he heard PI9ISS in a scheduled ARISS QSO also at well over S-9.

During their six-month stay on the ISS, Russian Cosmonaut Padalka will serve as the ISS Commander while Fincke will be the science officer and flight engineer. Both are expected on the air before they return home in late October. (ARISS, VHF Reflector, published news reports)

**

HAM RADIO IN SPACE: K6DUE ISS OPERATING EVENT CERTIFICATES

Certificates for those who took part in the K6DUE International Space Station Commemorative Operating Event held earlier this year have been distributed to the international delegates at the ARISS Meeting in the Netherlands on March 26th and 27th. Those picking them up were to forward the certificates to their national Q-S-L distributors who would then distribute them locally.

ARISS International Chairman Frank Bauer, KA3HDO, says that approximately 130 hams will be receiving certificates. The event was held to honor the memory of the late Roy Neal, K6DUE who founded both the SAREX and ARISS programs. Neal, who also served as the Vice President of Amateur Radio Newsline and as a frequent news anchor passed away last August due to complications following heart valve replacement surgery. (ARISS, AMSAT BB)

WORLDBEAT: NEW ZEALAND TO ARGENTINA COMMEMORATIVE

ZL1AWW is working on plans for a commemorative station to celebrate the 80 th anniversary of the first New Zealand to South America two way contact. This, by Ivan O'Meara Z2AC and Carlos Braggio, RCB8.

The proposed date is May 22nd or 23rd. This original 10,300 kilometer Morse code conversation took place in 1924 and established a world distance record for two-way radio for that era. (GB2RS)

**

DX

In D-X, word that the Rodrigues Island 3B9C operation finally went QRT on Monday, April 12th. In their time on the air, the operators racked up a very impressive 153,000 QSO's. QSL this one as you were directed on the air. (OPDX)

**

THAT FINAL ITEM: THE NAB 2004 HAM RADIO RECEPTION

And finally, as most of you know, it was Heil Sound Limited hosted the National Association of Broadcasters ham radio reception on Wednesday night April 21st. It was literally a star studded event. Newsline's Bill Pasternak, WA6ITF, and his tape recorder were there:

--

When Bob Heil, K9EID, and his wife Sarah throw a party, everyone with a ham radio license shows up. And thats exactly the way it was on Wednesday, April 21st when Heil Sound Limited hosted the annual National Association of Broadcasters Ham Radio Reception at the Hilton Hotel in Las Vegas, Nevada. There was food music and lots of prizes. Some were even personalized:

--

Bob Heil Audio: Hear it at www.arnewsline.org

--

That was Bob Heil presenting only one of over a hundred prizes given out over the three hours of the gathering. We finally were able to corner Bob Heil and we asked him how this all came about:

--

Bob Heil Audio: Hear it at www.arnewsline.org

--

Somewhere between 800 to 900 radio amateurs attending the National Association of Broadcasters Convention literally had a hamfest of their own thanks to Bob and Sarah Heil. Thats up by an estimated 40% over past years. Sarah Heil says that for her husband, putting this reception together was a labor of love:

--

Sarah Heil Audio: Hear it at www.arnewsline.org

--

The 2004 NAB Ham Radio Reception sems to have set several records. More important -- a good time was had by all.

Reporting from near the Convention Center in Las Vegas, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

For those not aware, the annual Natrional Association of Broadcasters Convention in Las Vegas is the largest gathering of broadcasting and teleproduction professionals in the world. (ARNewsline (tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the

RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, in Auckland, New Zealand saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Hi all,

Can anyone of you provide me an Ethereal trace of
a successful EchoLink connect procedure to a repeater?

I'm experiencing a timeout issue although the trouble
shooting tool says that both the UDP and TCP port settings
are ok.

I'd be glad if anyone could send me an Ethereal trace of
a working scenario so I can compare the message flow.

Is there any description of the EchoLink VoIP protocol
available?

Thanks a lot,

Andre

Hi There

I'm thinking about buying the above mentioned radio. One of the reasons, is it's< abillity to be modified to TX on 70 MHz (4 meter).

Has anybody any experience with cutting D1 & D2, especially concerning the RF power output on 70 MHz after the mod. I've heard that is is only a few mW of output, but i find this hard to believe...

Looking forward to reading about your experiences...

I have a nice ICOM IC-2800H. This is the Icom dual band(2/440) with the color display. Its in good condition. It has been in the mobile. Some minor wear on the rf deck. The face is near perfect. The previous owner has modified it for MARS/CAP. Comes with the box, manual, and mike. Asking $350.00 OBO. Would trade for a Kenwood TM D700.

Hello,
I'm thinking of creating an online radio program that would showcase music by independent, self-produced musicians; but I have a couple of legal questions I'd like to ask:

- How to protect myself against the possibility of someone sending me copyrighted music, not belonging to them, but pretending it does? It is obviously impossible to check that such or such song was not actually recorded or written by someone else...
- Is there a standard contract enabling an artist to allow a broadcaster to use their music free of charge (knowing in this case that the artist, through the promotion, is very much the beneficary, and knowing that the program itself is non-profit making)?

thank you

Guillaume.

ARRL BOOK ON INTERNET LINKING

VoIP: Internet Linking for Radio Amateurs
-- by Jonathan Taylor, K1RFD
Growing numbers of hams are using VoIP, or Voice Over Internet Protocol, in combination with their radios for long-distance communication spanning hundreds or thousands of miles. They're using the Internet as the relay between their base stations, handhelds and mobile transceivers.

This is a guide to the four primary VoIP systems used by hams: EchoLink, IRLP, eQSO and WIRES-II. The book is designed for beginners who need information on how to set up and use these systems, but it also provides plenty of technical "meat" for those who want to dig deeper and explore how the systems actually work.

Contents:

Connecting The World
Using A VoIP Link
Conference Servers, Reflectors and Nets

Other Linking Systems
Setting Up Your Own Node
Digital Audio and the Internet
Under The Hood: Echolink
Under The Hood: IRLP
Legal Issues In Linking
Web Resources & Glossary
This may be the first book ever written about ham radio applications of VoIP! Author Jonathan Taylor, K1RFD, is the creator of EchoLink and one of the top experts in Amateur Radio Voice Over Internet Protocol. He is a member of the American Radio Relay League.

First edition, � 2004, The American Radio Relay League, Inc.

Hi There

I'm thinking about buying the above mentioned radio. One of the reasons, is
it's< abillity to be modified to TX on 70 MHz (4 meter).

Has anybody any experience with cutting D1 & D2, especially concerning the
RF power output on 70 MHz after the mod. I've heard that is is only a few mW
of output, but i find this hard to believe...

Looking forward to reading about your experiences...

Vy 73 de OZ5Z/Finn

Amateur Radio Newsline™ Report 1395 May 7, 2004

Amateur Radio Newsline report number 1395 with a release date of Friday, May 7, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC denies a request for more time to respond on BPL, the NTIA report on BPL explained and ham radio will honor the military. Find out the details on Amateur Radio Newsline report number 1395 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: FCC REFUSES TO EXTEND COMMENT CUTOFF ON BPL

The FCC has issued a ruling denying a request from the ARRL to extend the Commentary cutoff date on the introduction of BPL as outlined in ET Docket 04-37.

The ARRL had asked the Commission to extend the deadline for Comments and Reply Comments by 45 days in the Broadband over Power Line Notice of Proposed Rule Making. The League had argued that this would give it and others the time required for the National Telecommunications and Information Administration to conclude its study at BPL, issue an initial report and give commenters time to evaluate it.

In its April 30th release denying the request the FCC gave no overriding reason for turning it down. Instead the agency said that the now past May 3rd commentary cutoff date stands. It added that those wanting to address the issues raised in the NTIA report can do so during the Reply Comment period. That's open now and ends on June 1st. (ARNewsline(tm))

**

THE BPL FIGHT: NTIA RELEASES LONG AWAITED REPORT ON BPL

Meantime, as reported last week, the National Telecommunications and Information Administration has issued its long-awaited report on the interference potential of BPL. Amateur Radio Newsline's Mark Abramwicz, NT3V, is here with an in-depth look at the report and the affect it might of on the introduction of BPL technology:

--

The very title: "NTIA Report Lays Groundwork for Responsible Deployment of Broadband Over Power Lines" doesn't sound encouraging.

But like any package - or the glowing press release that accompanied it - the more than 100-page document contains so much more once you open it.

And, you don't have to go beyond the executive summary that accompanies the report to find the glowing praise by Acting NTIA Administrator Michael Gallagher in the press release is quickly muted. Muted by the facts and some disturbing interference problems the agency's own technical review identified.

CQ Magazine Editor Rich Moseson, W2VU, digested and analyzed the NTIA report and agreed to share his findings with the Amateur Radio Newsline audience.

"It is one of the first really objective looks at the real danger of interference caused by BPL," Moseson says. "As of objective as studies by the ARRL might be, they would be perceived as someone with a certain interest here.

"The NTIA is a federal agency and their engineering study should carry a lot of weight with the FCC."

Moseson says he identified five major conclusions. First, among them, that the methods currently used to measure noise levels and interference potential are not adequate, according to the NTIA. Essentially, he says, there's an underestimation of peak-field strength. And, peak field strength is the leading contributor to high-interference risks.

"As applied in current practice to BPL systems, Part 15 measurement guidelines do not address unique physical and electromagnetic characteristics of BPL-radiated emissions," Moseson says. "That's a quote. That's pretty significant that the Part 15 guidelines do not address the unique physical and electromagnetic characteristics of BPL emissions. So the measurement system being used is not right."

Second, he says the NTIA engineers said noise levels must be measured from power lines carrying BPL as well as the device that couples the signal to the power lines.

"What the NTIA is saying here is that you can be 100 feet down the street from the actual coupling device or up to 300 feet down the street and if the signal bumps into one of these corroded connecters or something, then, it's going to start radiating there," Moseson says. "And you have to measure all along the line as well as at the coupling device."

Third, Moseson says NTIA found interference to weak- or medium-strength signals is likely to affect aircraft operation and the navigational frequencies used by aircraft.

"Interference to aircraft reception of moderate to strong radio signals is likely to occur below 6 kilometers altitude - that's 20,000 feet - within 12 kilometer center of the BPL deployment," says Moseson, quoting from the report. "Interference would likely occur to aircraft reception of weak to moderate signals within 40 miles of the center of the BPL deployment area."

NTIA's fourth major conclusion, according to Moseson, is that results of BPL tests and implementation in other countries has met with mixed results. And, in some cases, it has been shut down entirely. He cites an example:

"During an emergency exercise of the Austrian Red Cross in May 2003, communication was massively disturbed - that's their words - by BPL with interference levels exceeding the limits by a factor of 10,000," Moseson says.

The fifth NTIA conclusion identified by Moseson is the agency's desire to conduct more testing.

"They proposed some more stringent measurement standards and procedures along with some of the interference mitigation techniques that were mentioned in the FCC's Proposed Rulemaking and others that weren't," Moseson says. "But they're saying here that they're not even sure that those are going to work. They want to do more testing on them and report on it later in the year."

The bottom line: Will the FCC's commissioner take seriously the findings and red flags raised by the NTIA report?

"In this case, I'm not really sure because they seem to have made up their minds going into this as to what they were planning to do," Moseson says. "So, I am not as optimistic as I might be in other rulemaking proceedings."

So, how soon could the FCC act? Moseson says he wouldn't even begin to speculate.

"At this point the comment period is closed. Comments closed on May 3," Moseson says. "There's a two-week reply comment period. And, then it's up to the commission of what they're going to do and when they're going to do it.

"There is no requirement that the FCC issue a ruling in a given amount of time after the close of comments on a proceeding. So, they very well could wait until the NTIA issues its second report. And, I'm sure that it would be accepted into the record as coming from another federal agency."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The full report may be downloaded, either in full or chapter by chapter, from the NTIA website. Its in cyberspace at www.ntia.doc.gov/new.html (ARNewsline(tm))

RADIO LAW: LEGALIZING AMBER ALERTS ON THE HAM BANDS

Hams worried that they might get into trouble if they relay lost child or AMBER alerts on the air may soon have regulatory relief. This as wording in an omnibus 71-page, Notice of Proposed Rulemaking on a variety of ham radio issues issued in mid-April tackles the problem had on.

One of the proposals in the April 15th NPRM proposes to and we quote: "clarify that amateur stations may at all times and on all channels … make transmissions … which may be instrumental in saving human life and property." In other words, if enacted as proposed, retransmitting AMBER Alerts and just about any other type of live saving communications would become legal under Federal law.

The proposal is part of FCC WT Docket 04-140. The Comment deadline is June 15th. (CQ)

RESCUE RADIO: YOUNG HAM TRIES TO GET AID FOR DROWNING VICTIM

A tragic story from the Great Smoky Mountains National Park near Townsend, Tennessee. That's where a youngster on a field trip drowned at Cades Cove while a classmate with a hand held 2 meter transceiver tried to get help to save him. Bill Pasternak, WA6ITF, reports:

--

It started about an hour after the group arrived at the campsite on Friday, April 30th. According to news reports, a group of people including the ill fated teen took to the water. In a short time, the victum, identified only as Chris found himself in trouble. Others tried to save him while teachers using cell phones tried to call for help.

When it was found that there was no cell phone coverage, another student, Jordan Webb, KI4AVG, said he would try ham radio. Jordan had brought along his two meter hand held radio. He found a near-by high location and called for help over the Knoxville area WB4GBI repeater. He was answered by Jim Bond, K6SPY, who notified Park Rangers. Unfortunately they didn't arrive in time to save the victum, but because KI4AVG had the foresight to bring along his 2 meter talkie, his classmate's body was recovered within hours, instead of days.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, reporting.

--

Jordan Webb, KI4AVG is only thirteen year old and attends the Vine Middle School in Knoxville. He has been a ham for just about a year and serves as net control for the weekly Young Amateur Radio Net on the Radio Amateur Club of Knoxville W4BBB repeater. (K4PZT, KG4UJC, KG4YTT, WBIR.com)

**

ENFORCEMENT: NET INTERFERENCE FOUND

Authorities in the United Kingdom were quick to act when a propagation net became the target of a jammer. We have more in this report:

--

Listeners to the DK0WCY Solar Geomagnetic Information broadcast on 75 meters recently experienced interference from an unmodulated carrier on the channel. The interference, which appeared to be deliberate jamming, was reported by the DK0WCY team to the authorities in Germany who founf that the interference was coming from from the United Kingdom.

With support from the Radio Society of Great Britain's Amateur Radio Observation Service and other U-K hams, authorities traced the interference to an amateur station in the Chepstow area. The interference ceased abruptly at 0608UTC on the 25th of March. No explanation was given but it is assumed that government regulators took the station off the air.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

No word on who the jammer was or what punitive action will be taken by U-K telecommunications authorities. (GB2RS)

**

ENFORCEMENT: YOU BETTER STAY OFF THE RADIO

Back here in the U-S-A, the FCC says that a former ham who has been to jail for operating without a license is back on the air and still has no FCC authorization to be there. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: "Richard A. Burton of Harbor City, California, has been sent a Warning Notice of unlicensed radio operation on 2 meters in the Los Angeles area. Mr. Burton has been convicted in 1984, 1990, 1993 and 2000 of unlicensed radio operation under Section 301 of the Communications Act of 1934, as ammernded, and has served time."

--

According to Duckworth, the Notice sent to Burton states that additional instances will lead to -- and we quote -- to the same result. The FCC has also designated for hearing a second General Mobile Radio Service application that Burton had filed with the agency. (FCC, RAIN)

**

ENFORCEMENT: CRANK CALL TO CUBA'S CASTRO LEADS TO $4000 FINE

The FCC says that a Florida radio station should be fined $4000. This, for permitting the hosts of the Morning High Jinks show placed a crank-called to Cuban President Fidel Castro and broadcast the recording.

As previously reported, Joe Ferrero and Enrique Santos of WXJD FM used snippets of an earlier prank call involving Venezuelan President Hugo Chavez get past a Castro receptionist and up the chain of command in a five-minute broadcast June 17th of last year. They then fed pleasantries to Castro before breaking in and calling him an assassin.

On April 28th the FCC concluded that the station should be forced to pay a fine for the broadcast. The agency rejected claims that a rule requiring people to be notified before their voices are used on the air does not apply to people in Cuba.

WXJD was given the usual 30 days to pay the fine or to file a further appeal. (Published reports)

**

RADIO RECORDS: XL TO UA ON 137 KHZ

Hams in New Zealand and Asiatic Russia have claimed a new world low-frequency distance record. ZM2E at Quartz Hill near Wellington and UA0LE near Vladivostok say that they completed a two-way contact the night of the 20th of March on 137.70kHz. The path length is estimated to be 10,311 kilometers or 6392 miles. (Q-News, GB2RS)

**

AWARDS: YCCC OFFERS SUBSIDY AWARD PROGRAM

The 400 member Yankee Clipper Contest Club has announced that it's First Annual DXpedition Award Program has been funded for the 2004 through 2005 contesting season. The purpose of the program is to encourage new as well as young amateurs to participate in contesting.

As part of the award program, the Yankee Clipper group will award the winning applicant up to $1,500 to accompany a YCCC authorized Dxpedition and / or Contesting operation any where in the world for up to one week, to operate in one of the four major contests.

This a first time program for the club. The winner will be chosen and announced at the Boxboro Hamfest in August and there are some restrictions on who can apply. More information is on line at www.yccc.org or by e-mail to W1LLU@verizon.net (W1LLU)

**

THE SOCIAL CIRCUIT: MARC HAMFEST AND COMPUTER FAIR

Turning to the ham radio social scene, the Mid-Atlantic Amateur Radio Club will be presenting their annual Valley Forge Hamfest and Computer Fair, Sunday, July 11th. The venue is the Kimberton Pennsylvania Fire Company Fairgrounds on Route 113. Admission is $6.00 for hams. Unlicensed spouse and children of licensed amateur radio operator will be admitted free of charge. For additional hamfest information, please e-mail MARC at Hamfest-info@marc-radio.org. Information is also available on the club website at www.marc-radio.org. (Via e-mail)

**

HAMVENTION 2004: THE ARRL PUBLIC RELATIONS FORUM

The ARRL sponsored Public Relations Forum at the 2004 Dayton Hamvention will be held at 8:30 A-M on Sunday morning, May 16th. The venue is Meeting Room 1 at the Hara Arena and those planning it say that this will be a do not miss event for anyone interested in promoting the hobby.

What will be discussed you ask? Well the major items include public service, spectrum protection and of coarse Broadbnd Over Powerline internet access. The session will also explain how to tell the world outside the hobby about Amateur Radio and how to address our concerns to public officials and local media.

Again, that's Sunday, May 16th at 8:30 in the morning for the ARRL Public Relations Fourm at Hamvention 2004. We will see you there. (Dayton Hamvention(r))

**

HAMVENTION 2004: A NICE PLACE TO LAND

And if you are a private pilot planning to fly your own plane to next weeks Dayton Hamvention, the events planners have a tip for you. Consider landing and tie-down at Greene County Airport in the near-by town of Xenia.

That field is located just south of Route 35 approximately 7 miles east of Dayton and is the closest airport to downtown. Its also among the easiest to get in and out of using small aircraft. Fuel prices are reportedly some of the lowest in the area, and the facility is well kept and capable of handling quite a bit of traffic.

Green County is just one of many airports catering to pilots of small aircraft in the Dayton area. More information about it is on-line at www.gwaohio.co. (Dayton Hamvention(r))

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WITH NEWSLINE: MORE THANK-YOU'S FROM N6TCQ

Ladies and gentlemen, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

Still playing "catch-up" for our supporters, in the month of July last year
we heard from:

The Raleigh, NC Amateur Radio Society, The Ohio-Kentucky-Indiana Amateur Radio Society, The Garland, TX ARC, Monthly contributor William Walters, WA2IBM, of San Jose, CA; Monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and Brad Berryhill, WA6JJB of Anaheim Hills

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at
www.arnewsline.org. That address will be repeated at the end of the newscast. I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: SPAM LOWERING LEGIT E-MAIL

Meantime, a recent survey finds that Americans are e-mailing less and trusting e-mail less because of the growing flood of junk messages. According to the Pew Internet and American Life Project, 29% of e-mail users have reduced their overall use of the medium while 63% of e-mail users say they are less trusting of e-mail overall because of spam. That's up from 52 percent in June of 2002. (Technology OnLibe)

**

HAM RADIO IN SPACE: SCIENTIST TO BE NEXT SPACE TOURIST

The next space tourist plans to spend his time on-orbit studying environmental issues. Gregory Olsen, the founder of Sensors Unlimited Inc. in Princeton, New Jersey says that he plans to bring along infrared sensors, which detect varying levels of heat, to analyze pollution in the Earth's atmosphere and the health of agricultural systems on the ground.

Olsen told a recent news conference that he hopes to inspire young people with his mission, and want to arrange a video teleconference with Trenton High School in New Jersey and a school at the Crow Indian Reservation in Montana.

The 58-year-old Olsen has hired Space Adventures to get him to the I-S-S. This is the same company that brokered the first space tourist trip of millionaire Dennis Tito's flight aboard a Russian spacecraft in 2001. Olson's eight-day voyage to Earth orbit is currently scheduled for April of 2005. As with all past space station visitors, Olson is expected to be trained in Amateur Radio and operation of the ham gear aboard the I-S-S as well. (Published reports)

**

WORLDBEAT: NEW RADIO RULES IN KENYA

Visiting hams now have a way to get on the air from Kenya. Ted Alleyne, 5Z4NU, the Chairman and Secretary of the Amateur Radio Society of Kenya sdays that that the Communications Commission of Kenya announced on April a new and more relaxed policy towards amateur radio licensing.

Until now it was "practically impossible" for most visitors to obtain an amateur radio license in Kenya. The previous stumbling blocks for reciprocal agreements, Security and Police vetting, have been dropped entirely. However, applicants' countries must have diplomatic relations with Kenya and 5Z4NU says that the ARSK will be happy to supply the new license application forms. (GB2RS)

**

WORLDBEAT - GERMANY: PROPAGATION STUDIES WEBSITE UPDATED

Volker Grassmann, DF5AI, says over the VHF Reflector that he recently updated his "Amateur Radio Propagation Studies" web site. Features now include a countdown for the 2004 sporadic E season, a discussion of thunderstorm effects on the ionosphere, notes on the people behind VHF dxing and much, much more. The page is in cyberspace at www.df5ai.net. Volker says come over and spend some time at the site. (VHF Reflector)

**

DX

In D-X, word that GB5JCT is on the air from the fishing trawler Jacinta moored in Fleetwood dock in the UK. The trawler is now a museum dedicated to the fishing fleet that used to be based at Fleetwood. Over the Easter weekend the station was heard on 40 metros SSB and locally on 2 meter FM. (GB2RS)

Also, G3TMA, G3KHZ and IZ1CRR will activate a couple of Borneo's Islands on the Air during the next couple of weeks. If you work them QSL via G3KHZ. (GB2RS)

Lastly, GW3UOF will be active portable SV8 from Kavos, Corfu, in the Greek Isles through May 17th. Look for him on CW, SSB and various digital modes. QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: HONORING THE MILITARY

And finally this week, ham radio will be honoring those serving in the military. Jim Meachen, ZL2BHF, is here with the details:

--

Amateur Radio Military Appreciation Day will be held world-wide on Saturday, May 29th from approximately 10 a.m. to 7 p.m. Central U-S time. According to Emery McClendon, KB9IBW, this will be a day-long operation to talk to troops, and associated groups around the globe in appreciation of their service and personal sacrifice.

The main operating location will be from Johnny Appleseed Park and

Wizards Memorial Stadium in Ft. Wayne, Indiana, using Emery's KB9IBW call sign. That station will be on from about 4 p.m. Central Daylight Time through the end of the Wizards game.

Planners say that they know of at least 25 military bases and club stations that will be operating the event. This includes stations in Iraq, Kuwait, and bases around the globe. More information on this event is in cyberspace at www.fortwaneradioclub.org

--

Again, the website for more information on Military Appreciation Day is www.fortwaneradioclub.org. (KB9IBW)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, this word for listeners who use our 661-296-2407 phone line to get the newscast. That line will be down for about a week or so starting on Friday, May 14th as the phone machine that feeds the newscast undergoes repairs. We should have it back on-line by May 21st if not before. In the meantime, please use any of the other lines you find listed on our website.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73, see you all at the 2004 Dayton Hamvention and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Hi

I was given a Omni antenna from a ham who claims the best thing since sliced cheese. I want to use it for receive at first and when licenses come in for transmit. I would like to transmit on as many frequencies as practical and possible as I have a good tuner.

This is an omni, aluminum, telescopic and it 19 feet long. It has 4 ground planes about 8 feet long.

As I was cleaning it up, I noticed a coil at the base of the antenna connecting ground to center. Right at the female connector within the base of the antenna. There is a coil that has approx 20 windings and connects to ground. The center also feeds to the piping that stretches the full 19 feet. The coil is pretty rough shape.

My question is in regards to this coil. Is it necessary? What function will it serve? I can rebuild it if need be but is that necessary? And is 19 feet a good length for utilizing as many useable frequencies as possible?

Any advice?

Thanks

Bob

While I think (hope) his intentions are honorable
I for one will be hesitant to donate any gear to any
so called 'ham' charity for a tax write off.

A ham club I was a member of once did this
"tax write off donation" thing a year or two
ago and only one-quarter of the donated radio
gear (from 3 estates) were kept for the club.

The rest of the gear was pared-off between
Club Officers and Directors, who then mostly sold
it on e-Bay and a significant personal profit or
quietly kept it for their home/personal use.

Moral of the story: Tell the XYL that your ham gear
is not to be donated to a club after you go SK.
The many vultures will likely try and grab and
profit from it. Have a trusted ham sell it for fair
profit to the estate, or box it up in taped-up sealed

non-descript cardboard boxes and put em outside on the curb the morning of trash day so the bastards won't scavenge it either. (I've seen some bastard hams actually drive by homes of recent SK's on successive trash nights hoping the XYL would put the radios out on the curb)

When they knock on the door askin if they would like to "part with" that old "radio junk", tell em the trash man took it last week and it sounded and felt REAL NICE when the hydraulic jaws of that trash truck crushed and smashed that Yaesu and Henry to SCRAP IRON out in the street a little earlier.....(trust me, I did this once to a ham vulture whom I knew would knock on the door of the XYL of some SK ham I knew. The look on their face of the guy was ***absolutly priceless**** when she told them, as I coached her to do, that the big amplifier he wanted for $50 was crunched in the back of the trash truck a few hours earlier....)

Hello Paul,

Sorry to hear you had so much trouble with prior donations to other groups. I too have seen the SK feeding frenzy you describe.

My ARES/RACES/Skywarn crew are not vultures.

Anything donated that works will go into the motorhome or if not practical will be used to build up battery powered field units or if AC only used in our Net Control Radio room.

Anything that is totally not useable by my group will be offered to surrounding ARES groups.

Like so many other public service amateur radio groups we lack significant corporate or government financial sponsorship.

I'm trying to pull the group out of the 1980's and at least into the late 1990's.

If not practical to donate to my group please consider looking around your immediate area for a worthy group.

Thanks,
Steve
N2UBP

Surrrrrrrrrrrrre, and we all all believe the Easter bunny is about to arrive too!   As one poster noted, I've seen more of these "so called" charity donations end up in the private shacks of the guys running the "so called" charity drive and/or being sold for cash.
Go sling your *bullshit* some place where people will be stupid enough to believe it.

Kenny Joe

F/S IC-W32A 5 watt HT. Radio is in nice condition. It
comes with Manual, Rubber Duck Antenna, Cigarette Lighter
DC Power Cord, Speaker/Mic,Rapid Charger that charges
both NiCAD and Ni-MH and 9.6 volt battery(BP-173)
Only blemish is paint is worn off where D-ring for
hand strap has rubbed against case. Keypad is perfect.
Pictures on request. $200.00 shipped CONUS. Payment by
US Postal Money Order, Bank Check or PayPal.

Sadly it will all be useless if the corporations and Michael Powell have
there way.
They are going to destroy the whole HF band up to TV Channel 6 with
broadband over power lines.
This is what Bush refers to as "Broadband in every home" it also forces
everybody on to CATV for TV reception.

Yep ME !!
Im not paying Cablevision $60-95+ a month, for smut networks, MTV and the
VIACOMMIE's

Have a 36 element Channel Master and a rotor
I get super clean HDTV signals (some programming) from Manhattan + WLNY,
WLIW on UHF, also 50's Sci Fi monster movies on UHF at night.
AND I WATCH THOSE ON AN OLD DUMONT 21 inch, its great !!

I have Cable (Comccast) and DTV. My HDTV antenna mounted IN the attic give
me the best HD reception.

http://mailman.qth.net

They host the QRP-L reflector, and it's probably the most widely used.

Go to http://www.fpqrp.com and join the Flying Pigs QRP Club
International and they also have a pretty good QRP list.

The Flying Pigs are a great and fun group, no rules, no dues, no
meetings, just fun.

>the "so called" charity drive and/or being sold for cash.

You poor Texas guys sure are bitter.

As for me, after I'm dead I plan not to worry too much about
old ham gear. If I wanted to "invest" for my wife and
children then using ham gear to do it would be a very
stupid choice. That's not to say that I want my widow to
be cheated. But I don't plan on burdening her with
the crown jewels of ham radio. And if I did, I would plan
a way to have it managed without additional stress.

Anything I've left can be given away to someone who is interested
in using it... or selling it, if they are kind to my family
and considerate when they come and get it.

So if a ham says, "give it to the club" why do you care?

FS: COLLINS 180-U-2 ANTENNA COUPLER

Collins 180-U-2 antenna coupler consisting of CU-737 tuner and 302C-3
wattmeter (with directional coupler, speaker, antenna relay) installed
on rack panel. All components in good cosmetic and electrical shape.
Wattmeter is 100/1000W forward/reflected. $325 shipped lower 48.
Email me for photos.
Thanks and 73

Hi to you all !

I have this question of which I am curious what you think of it.

In my situation it's about shortwave listening, not transmitting.

I have understood that it's a good idea to put a HF choke directly under the feedpoint of an antenna (mine is a T2FD with balun) to filter noise etc from PC's, TV, from the signal.
Also ferrite in the coax line should decrease the noises.

I was wondering it, besides the filtering of unwanted products, also WANTED signals are being attenuated. So is the signal weakened as well?

I myself have 7 turns through 2 ferrite cores under the feedpoint of the T2FD.
All works ok to me, but I was just wondering......

So is the weapon worse than the thread ??

And is it for transmitting only or also applicable for listening situation?

Thanks for your time!

73's

Kees

RESCUE RADIO: VK HAM BRINGS BOAT TO PORT SAFELY - BY RADIO

A pair of Australian and American hams are credited with being a lifeline to a storm damaged boat with six people on board. The Australian was at his home QTHand the American was at sea on the stricken ship. Q-News Robert Broomhead, VK3KRB, in Waverly, Australia picks up the story from here:

--

Bernie VK2ABN on March 4 was in QSO with VK2ABT/VK3ACA and heard a weak and distorted signal, KA7MWL Shawn, who was aboard a Ukrainian registered schooner sailing from Wellington NZ to Sydney Aust., sails had blown out and they were making slow progress just on 4 knots.

At that speed they had calculated that they would run out of fuel before reaching port. Bernie VK2ABN ascertained 6 people were on board, BUT NO EPIRB! All this information was relayed to Sea Safety Canberra.

With the schooners satellite communication system also out of action, the Ham aboard, Shawn KA7MWL operating around 5 watts on 7070 Khz was the only contact.

Sea Safety Canberra QSY'd from 8176 kHz to the 40 meter band but as their transmitter was in Charleville, SW Queensland, no contact could be established.

Bernie arranged a for sked in 24 hours time, this time things a lot better, radio and safety wise, the schooner expected in Sydney ahead of previously estimated time.

As Bernie said: "I hadn't realised you can now call MAYDAY on the various DISTRESS frequencies but nobody is listening any more. Since the advent of GMDSS a computer scans the frequencies looking for encoded tones. If it finds one it attracts human intervention."

VK2ABN Bernie says " It was a bit like the Tony Hancock Radio Ham Sketch in retrospect, anyway that's what his wife thought and our telephone sure ran hot for a couple days!"

--

According to Q-News, the Sydney Australia Water Police stayed in contact with VK2ABN to keep abreast of the situation. With no High Frequency facilities that could hear the stricken craft, they were totally reliant on ham radio.   (Q-News)

**

THE BPL FIGHT: CLARIFYING FEMA'S CLARIFICATION ON BPL

The debate surrounding Broadband Over Powerline Internet access has taken a new twist. Opponents are now raising fears about the contents of a letter recently released in the FCC's BPL public comment files. It was sent by the Federal Emergency Management Agency's top administrator to FCC Chairman, Michael Powell. Opponents say the letter clearly shows FEMA is now reversing course on its vehement opposition to nationwide BPL deployment. Amateur Radio Newsline's Mark Abramowicz NT3V has the very latest

--

The letter was written by Michael Brown, Undersecretary of Emergency Preparedness and Response in the Department of Homeland Security. That's where the Federal Emergency Management Agency was placed in President Bush's restructuring of agencies related to the security of the United States.

Brown's letter to Powell actually was briefly mentioned in February articles on the FCC's BPL action that were written for two nationally-circulated computer magazines. But it apparently got little notice and its contents were not fully detailed.

Now that the letter is part of the FCC BPL file, its contents are in the public arena.

Brown tells Powell in the letter dated January 8 that FEMA wants to clarify its December filing so it is "not misunderstood or misconstrued."

Brown goes on to say FEMA is aware that some of what he labels "distinct approaches" to BPL may cause interference to FEMA's H-F emergency communications network.

But then, and this is the section that has BPL opponents worried, Brown writes: "However, we continue to study the BPL proceeding and have not concluded there is a material interference problem or that all of the distinct technological approaches to BPL pose risk of interference."

Compare that to the language in FEMA's December 2003 filing on BPL with the commission prepared by Barry West, FEMA's chief information officer.

West writes: "FEMA has grave concerns regarding the interference that likely would be caused to government communications by unlicensed BPL systems."

Or this comment: "This interference will severely impair FEMA's mission-essential HF radio operations in areas serviced by BPL technology."

In an interview with a Philadelphia radio station, a FEMA spokesman insisted there is no material change in the agency's position.

The spokesman says Brown's letter was sent to Chairman Powell to clarify that FEMA is still studying the issue and recognizes and supports the FCC's desire for a greater broadband capability for the nation.

The spokesman says Brown wants to see more studies on the interference issue and is working with other federal agencies.

However, the FEMA spokesman emphasized that any deployment of BPL should not pose an interference threat to the agency's H-F emergency communications network.

Those close to the BPL debate say Brown's letter, has only muddied the agency's position and sections could be embraced by both sides.

We'll let you decide.

Come to our website: www.arnewsline.org and click on this week's script and select the Text script and scroll to this report to find the internet U-R-Ls leading directly to Brown's letter and FEMA's original December filing.

(Letter from Michael Brown, Undersecretary of Emergency Preparedness and Response, FEMA. January 8, 2004)

<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6516083909>

(FEMA's December 2003 filing)

<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6515292045>

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--
In a communication posted to members of its Public Relations Reflector, the American Radio Relay League suggests avoiding references to the FEMA position for now in any BPL discussions or comments. (ARNewsline(tm))

**

THE BPL FIGHT: BIG NOISE IN MANASSAS

BPL has come to Manassas, Virginia and the hams there say that its not fun to listen to:

--

BPL audio

That's the racket being created by the latest of three Broadband Over Powerline or BPL installations opened in Manassas. This, as provided in a sound file on the www.W4OVH.org website, courtesy of George Tarnovsky, KE2AM. The interference level appears to be such that it would be all but impossible to hear a radio signal through it.

The kicker here is that this is reported to be an underground electrical feed that utilities claim are far less noisy than overhead wiring. However, having the wires underground does not seem to reduce the interference. At least not in this case.

And if you want to know more about the BPL hazard to America's communications, go get a copy of the of CQ. Joe Lynch, N6CL has an excellent analysis article in his "VHF Plus" column in the just out April issue of that magazine. (VHF Reflector, PR Reflector, W2VU)

**

THE BPL FIGHT: SOUTHERN OREGON GOES GLASS

Meantime, to the West in Oregon there's some good news on the BPL front. It comes from southern Oregon where the obnoxious radio pollution of BPL has lost out to quiet fiber optic delivery.

According to Doug Beck, K6ZX, in the town of Merlin, a private company, forming public and private partnerships with local government has wired the city of Ashland with what's called the Ashland Fiber Network. It has also extended fiber to the city of Medford with some 74 miles of glass cable connecting all schools to provide VOIP audio and video conferencing.

But that's not all. The partnership is also in the process of connecting to Grants Pass and will wire all the local schools and government offices as well. The best part is that all excess bandwidth is being made available to local citizens and wireless last mile technology is being explored to connect rural users.

Beck says over the VHF Reflector that the area is aiming to have a broadband connection available to all rural users without any Broadband over Powerlines in the area. (VHF Reflector)

**

Break 1

From beneath the Southern Cross in Auckland, New Zealand and from our studios in Los Angeles, California, this is the Amateur Radio Newsline, heard on bulletin stations around the world including the Metro Atlanta Telephone Pioneer Amateur Radio Club net in Atlanta Georgia.

(5 sec pause here)

**

RESTRUCTURING: SWEDEN GOES CODE FREE

It now looks likely that Swedish radio amateurs with a Class 2 license which is the equivalent of our code free Technician class, will be allowed to operate on the High Frequency bands as of early April. The decision to drop the Morse code requirement for an HF bands license in Sweden had been postponed from the 1st of January. A note in the March issue of QTC, the Swedish national society's magazine, suggested that on or about April 1st is when the change will be made. (GB2RS)

**

ENFORCEMENT: NO "DELIVER IT" ON 2 METERS

Using an illegal long range cordless telephone to deliver culinary delights is going to cost a New Jersey Chinese restaurant a good part of its profits. This, after the FCC levies a $10,000 against the eatery for operating transmitting equipment on 2 meters without a license. The FCC's Daryl Duckworth, NN0W, has more:

--

Duckworth: "A Notice of Apparent Liability to Monetary Forfeiture in the amount of $10000 went to Best Wok of Westville, New Jersey. An agent of the Philadelphia office had DF'd the signal on 145.8376 MHz and inspected the base and mobile units. The restaurant manager stated that he had purchased the long range cordless telephone system in another country and brought it to the United States to operate at the restaurant."

--

The FCC citation issued to Best Wok indicated that the telephone in question is not FCC Part 15 certified and is illegal to use in the United States. (FCC, RAIN)

**

ENFORCEMENT: IT AIN'T USER RIGHTS

A California ham is the latest to be told by the FCC that if he wants to challenge a repeater operators authority to kick him off a system, he will have to do it elsewhere. That the FCC will nor reconsider the matter.

The situation involves Mark A. Glover, KE6TTL of Garden Grove. Apparently, Glover has complained to the FCC about his being banned from using a repeater owned by the Catalina Repeater Association with the apparent blessing of the FCC. This in a letter from the regulatory agency to Glover back on February 2nd.

In responding to Glover's February 26th complaint, the FCC says that its letter of February 2nd explained the right of the repeater association to make such a request. Also, if Glover has an objection to the decision of the repeater owner, that he is free to pursue legal action locally. But says the FCC it won't be involved. There are no Commission hearing procedures are provided in such matters. (FCC)

**

ENFORCEMENT: TWO PEOPLE - ONE CALL

The actions of a New York ham in obtaining a call sign have come under FCC scrutiny. Again, the FCC's Daryl Duckworth, N-N-Zero-W:

--

Duckworth: "A letter went to Frank C. Richards, KG2IJ, of Moers New York concerning an application filed in 1995 where he requested the call KB4VU be changed to the next systematically assigned, to change his address to New York, and to renew the license. Frank C. Richards of Ft. Meyers, Florida, claims that he is the real licensee of KB4VU, and filed no application for a call sign or address changes and has never lived in New York."

--

The FCC says that this raises questions about abuse of the licensing system and the agency is investigating. It has asked the New York Richards to provide documented information on where he previously lived in Florida, when he moved to New York and all FCC Amateur Service licenses that he previously held. (FCC, RAIN)

**

WITH NEWSLINE: MENTORING PROGRAM UNDERWAY

Joe Eisenberg, K0NEB, who is running the database for the Roy Neal, K6DUE, Amateur Radio Mentoring Project says that the first matches have been made. These are in California with one being an e-mail only contact due to distance.

Joe says more match-ups are on the way. Hopefully as the database builds we will be able to make all matches face to face.

If you want to volunteer for the program or are in need of an Elmer to help you learn more, just e-mail us. The address is mentor@arnewsline.org. (ARNewsline(tm))

**

HAMFESTS: GAITHERSBERG - RIP

Some news from the hamfest circuit. After struggling to rebuild attendance from two moves the past four years, organizers in Maryland have canceled the 2004 descendant of what was once the popular "Gaithersburg Hamfest." This was a show that dated back to the 1950s. Amateur Radio Newsline's Newsline's Paul Courson, WA3VJB reports from Annapolis:

--

"There appears to be no support for this event from the member clubs of the Foundation or their respective members," according to Dan Blasberg, KA8YPY, president of the Foundation for Amateur Radio (FAR).

The group consists of a coalition of ham radio clubs in the Maryland, Washington, and northern Virginia region, and has used hamfest revenue to fund scholarships. In recent years it co-sponsored the event with one of its member clubs, the Columbia Amateur Radio Association (CARA).

Expressing his dismay that only two people had stepped forward from FAR to help stage the hamfest that had been scheduled for Sept. 11th and 12th Blasburg, said the lack of volunteer help is "not fair" to "carry the burden of a project of this magnitude and scope."

Blasburg concluded "it has been decided by the leadership of FAR and CARA to cancel Fall-Fest 2004 (due) to lack of volunteer participation." His note initially went out on an email reflector and since has circulated widely.

Blasburg this past week was hopeful his note would prompt people to step forward to help, but then, on March 27th, hamfest officials were openly talking about the cancellation and the withdrawal of the site reservation in West Friendship, Maryland.

What used to be the popular Gaithersburg Hamfest relocated to a parking lot outside a baseball field in Bowie Maryland in 1999, struggling as a local fleamarket no where near the size of the original site. A move to the Howard County Fairgrounds in 2002 did not help matters much, with attendance gaining marginally.

With the old Gaithersburg Hamfest now GONE, the successor as the largest in the mid-Atlantic region may now be the Timonium Hamfests at the Maryland State Fairgrounds north of Baltimore, where two clubs sponsor a Spring and a Fall Timonium

Paul Courson, WA3VJB, Annapolis reporting for Newsline.

--

Thanks Paul. (ARNewsline(tm))

**

HAMVENTION 2004: THE FCC WILL BE THERE

Some much more positive news comes from Dayton, Ohio. This with word that two of ham radio's most popular speakers will be back at Hamvention 2004. Of coarse we are talking about the FCC's chief ham radio rules enforcer Riley Hollingsworth, K4ZDH, and FCC rules man Bill Cross, W3TN.

The two were missing from last years Hamvention due to a scheduling snafu. As planners put together this years outing, the duo was among the very first scheduled in. You will find them holding forth from on Saturday, May 15th from 10 a.m. to noon in Hara Arena Meeting Room 1. If you want to know exactly what's happening at the FCC and how it will affect ham radio, this is the event to be at. (ARNewsline (tm), Hamvention(r))

**

HAMFESTS: THE URUNGA RADIO CONVENTION

And speaking about hamfests, heres on that's a bit unusual. Its the annual Easter Convention scheduled for Saturday the 10th and Easter Sunday the 11th of April at the Senior Citizen's Hall in the city of Urunga, Uganda. Events include a 3.5 MHz mobile hunt, pedestrian on 2 meter T-Hunt, a 2 meter mobile multi transmitter hunt and lots more. Sunday will feature the famous Urunga scramble. A mini contest to see who can make the most contacts in 30 minutes. Its a great show, if you happen to be in Uganda an Easter weekend. (Q-News)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM HELP: GET WELL WALLY

Unless you live in the American West where this newscast is produced, you are not aware of the contributions of Wally Foster, N6CDJ. Those who do know that Wally has been a huge contributor to ham radio in the state of California.

Over the years, N6CDJ has been responsible for thousands of hours dedicated to installing the region's packet radio system. He has also introduced many to packet and APRS and volunteers a lot of time to emergency services, fundraising, climbing towers and doing a first-rate job with repeater and station installations.

Wally's in a tough personal battle right now. Please drop him a QSL with a "get well Wally" message top help keep his spirits up during a trying time. You can send your wishes to N6CDJ at his callbook address. (AA6JR)

**

EMERGING TECHNOLOGY: MESH NETWORKS RADIO RELAY SYSTEM

On the emerging technology front, Mesh Networks, whose emergency-response devices communicate through each other rather than through a centralized command is expanding its technology. This, to work on other kinds of wireless equipment including radios used by emergency service communicators. Rick Johnson, KA9VZD, has more:

--

Originally developed by the U.S. military, Mesh system of networking lets individual radios serve as repeaters and relay points. This means that a firefighter too far inside a building to reach his command post can communicate with a nearby firefighter, whose radio will then repeat the conversation to the next closest radio. This is similar to hams using a programmable mobile radio to extend the hand of their 2 meter or 70 centimeter H-T..

And just like hams have been experimenting, Mesh networks can transmit video, data and position information in addition to audio.

But heres the departure fronm what radio amateurs are doing. The Mesh technology also has the ability to create super-sized Wi-Fi hot spots. This in itself gives the system wide utility in public service applications.

For the Amateur Radio Newsline, I'm Rick Johnson, KA9VZD, reporting.

--

Mesh Networks says that it is recognized as the leading developer of high performance and scaleable mobile ad hoc networking technology. More about the company and its products is on-line at www.meshnetworks.com. (Press release)

**

HAM AWARDS: THE VP5 YOUNG CONTESTER

If you are age 18 or younger, a licensed radio amateur and have been dreaming about going on a D-X contest, listen up. This next story is for you.

For the second year in a row, a competition has been announced for keen young contest operators with just such a dream. The winner gets an all-expenses paid trip to the Turks and Caicos Islands to operate with the VP5X Contest Group in the CQ World Wide DX phone contest this October.

Applicants must send an essay of 500 words or more telling how they got started in ham radio. It also must describe the person who helped them get started in the hobby and why you should be selected for this contest DX'pedition to VP5.

The winner must have his or her parents' written permission to make the trip on their own. Parents may accompany the winner at their own expense. All entries should be sent by e-mail to contests@vp5x.com by the 31st of August. (GB2RS)

**

HAM AWARDS: 2004 YHOTY NOMINATIONS BEING SOUGHT

And while we are at it, its time to announce the opening of the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award. This program is open to any FCC licensed youngster age 18 or younger residing in the contiguous 48 states. One who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

As we have said in years past, this award is not a contest for a prize. The person selected "Young Ham of the Year" is judged on his or her contributions to society through Amateur Radio. By way of example, a youngster whose only claim to fame is that of being licensed as an Extra at age four would not necessarily be judge as having made a significant contribution to the Amateur Radio service. On the other hand, a 14 or 15 year old Novice or Technician running a net during a major disaster or crisis would definitely be given consideration.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st. (ARNewsline (tm))

**

DX

In D-X, W3EF reports that the 3B9C dxpedition has already made over 110,000 contacts and with any luck will soon be the biggest dxpedition in history. He says that besides the sheer volume, this has also been a carefully planned and executed operation with strict attention to details such as propagation on all bands to all regions. W3EF says it has been an absolute blast with a wonderful team from all over the world. At airtime the 3B9C operation continues. (W3EF)

In other D-X news, word that K5CM, N5KW and W5AO plan to operate portable VP5 from North Caicos island through the 7th of April. The island counts as NA-002 for the IOTA awards. (GB2RS)

Also, F8DVD, will be active slash JW from Svalbard on 80 to 10 meters to the 10th of April. He says that although it will be very hard to make contacts on 80 meters due to the very short night, he will make several attempts to do so. (GB2RS)

Lastly, PA9JJ will be active as C56JJ from Gambia until the 5th of April. Look for him especially on the WARC bands and on RTTY and PSK 31. For all these operations, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: FCC MAY MANDATE IONESPHERIC DELAY

And finally, a little-known provision of a bill to crack down on indecency on the airwaves may directly affect Amateur Radio. It went into effect at 00:01 UTC on April 1st. Roving reporter Pierre Pullinmyleg, F0OL, reports:

--

I'ts a rather -- er -- interesting -- audio only -- April 1st report. To hear it download the newscast MP3 file at http://www.arnewsline.org/quincy If you miss Pierre this week you will have to wait another year before he returns.

--

Thank you, Pierre, and we hope you can get back to warmer weather without any -- er -- long delay. (F0OL)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline. Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066 in the U-S-A.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, in Auckland, New Zealand, saying 73 and we thank you for listening. Amateur Radio Newsline is Copyright 2004. All rights reserved.

The purpose of the choke is to keep "antenna" currents off the feedline below the antenna. It won't necessarily be helpful, because having the feedline act as part of the antenna may not be a bad thing. But it does help keep the system behaving like a dipole (or whatever antenna is above the choke). There _may_ be some advantage keeping locally generated noise out of the antenna if you prevent the feedline from being part of the antenna, so it's usually safer to include the choke than not...the probability is that the choked one will be better than the unchoked one. It's generally more likely that having the feedline act like part of the antenna will be a bad thing than a good thing.

No need to worry about losses in the choke: some turns of the feedline simply add the attenuation of that much feedline, nothing more, so long as you don't physically damage the feedline.

Cheers,
Tom

It won't hurt you to have the choke. Basically it's purpose is to isolate the antenna feed point form the coax transmission line.

On transmit it helps the antenna behave according to its design by isolating the coax outer shield from it by presenting high impedance to the RF current.

On transmit the radio generates a differential signal on the coax that the choke will not prevent passing on to the antenna.

On receive it prevents noise from the AC power the radio is plugged into from traveling up the shield to the antenna again by presenting high impedance to the RF current on the shield. This prevents the AC system noise from mixing with the signals the antenna is picking up and conveying it to the radio.

The choke stops the common mode current on the coax shield and it will not affect the signals the antenna picks up from the distance because the antenna generates a differential signal not blocked by the choke.

Echolink and ATV on The ISS project

ARISS teams from around the world met in Noordwijk aan Zee, Netherlands from 25 March to 27 March to review progress of the programme, determine future steps, and to review projects submitted to the organization for future use. Various committees updated the international team on their progress, while Chariman Frank Bauer presented an overview of the current status of the programme and previewed the Roy Neal certificate from the special event held late last year. (Certificates will be sent out shortly.)

Projects submitted for consideration include Amateur Television on the International Space Station. This project would allow for the possibility of mounting an ATV camera on the outside of the station.

A proposal was also made to incorporate the Internet Radio Linking Project and EchoLink
into school contacts. Further information on this technoligy can be found at www.echolink.org.

Aside from accomplishing general administrative tasks, this meeting gave team members the first opportunity in over a year to meet face to face and discuss the programme. The next meeting will be held in Alexandria, Virginia in October. It will be held just after the AMSAT general meeting on 10-13 October. All interested parties are welcome to attend.

If you would like to propose a project for the ARISS team, please contact Mike Miller at ka5sma@a... for further information.

G'day G'day

I am the owner of a Yaesu FT-ONE HF Transceiver, and I wish to perform a complete alignment on it. To do this an extender kit is required. I am wondering if anyone has a set of extender boards they would like to sell.
The board in question are:

a.. 14P Single Face extender board P/N D3100002
b.. 18P Double Faced extender board P/N D3100010
c.. 22P Double Faced extender board P/N D3100009
d.. 18Px2 Double Face extender board P/N D3100011
e.. Extender cable P/N T9204357

Alternatively does anyone know of a website, or any articles on homebrewing a set.

Many Thanks in advance

Tony VK2TS

```

Hi all, does anyone know where I can download the user manual for
the yaesu FT-2700RH. This is an older VHF/UHF mobile radio.

73

Hi all, can anyone out there tell me what these models are??

T L E 1713A
I think this is a 440-470MHz 75 watt amp??

T L D 1693A
Not a clue.

THANKS in advance for your help.

Tom (ex-WD9FZR),

Having been in ham radio over 30 years and currently holding a General ticket (just renewed about a month ago), I can vouch for everything which has been said here regarding renewal of a long-since expired license. Everyone is 100 percent correct--you must now start from scratch, since your ticket expired over two years ago.

The code should be the least of your concerns, as Gerry, W2GER/ex-WB2VMQ, et al. have mentioned. The code requirement, as they said, is now only 5 WPM for all existing classes of license (Technician Plus, General and Extra--Advanced was abolished some years ago, as was mentioned). I would concentrate on what you must know to pass the written test. You must score 74 percent or 41 of 55 correct answers (there are 55 questions on the written test) to pass this examination.

Also, it was mentioned, either by Gerry or by one of the other posters to the thread (I am posting this outside the thread "renewing a (really) expired license"), that it is entirely possible (and even likely) the code may and even will come back to you once you listen to good code sending awhile. As I am sure you are aware, ARRL's headquarters station, W1AW, transmits code practice each evening on all HF amateur bands at 10 p.m. Eastern (9 central) and at other times as well. If you have access to recent issues of QST, the practice schedule is in every issue. If you need more information on their practice transmissions, bulletins or new licensing requirements, it may be found on the ARRL web site, www.arrl.org, or by writing ARRL at 225 Main Street, Newington, CT 06111.

Note, however, that all CW practice and bulletin frequencies are slightly different today than they were when you were starting out in ham radio. This is because W1AW now uses computerized equipment to send its CW practice and bulletins; the frequencies are now offset (higher) by at least 1.5 kHz from what they were in "the old days". For example, you may remember W1AW's 80-meter bulletin/practice frequency as 3.58 MHz (the same as the color-burst oscillator frequency in a color TV set). That's where the transmissions were (on that band) for many years and decades, but since the transition to digital equipment, the frequencies have been shifted up ever so slightly, to 3.581.50 MHz. I don't know if you have an analog or digital transceiver or receiver, but in any case, it shouldn't be too difficult to find W1AW if you look for it.

Good luck and 73,

Hi all, I have a Kenwood TH-31AT. This is a 220MHz small handi talkie
dating back to around 1985.
The PL in this radio does not have dip switches on the front panel like
the newer version "TH-31BT"
The PL is inside the radio and the PL is selected by soldering /
unsoldering the pads on the chip.
Does anyone out there have the information that tells which pads to
solder / unsolder for the different PL frequencies??
I have about given up looking for it on the internet.
The PL board inside the TH-21AT (2 meters) and the TH -41AT (440) is the
same as the TH-31AT.
If you have this info and it's not to much trouble can you send it to:
lafayetteRadio@optonline.net
THANKS for your help!!!
73

Hi
We have put together a dipole, each leg is 66 feet. We put a 1:1 balun and it is running about 60 feet of 50 ohm coax. Presently it is about half way up the tower it is intended for so we could check the SWR before getting it up to the highest point. Presently each leg has some lags and dips, no major bends but it is just hanging there, over some bushes and the entire thing is over top of the house, and not touching anything but is very close to some steel guy wires (uninsulated).
Now we can only tune this down to a useable SWR on the 80m band. On all other bands we cannot tune it down to a safe operating range. We are using a good antenna tuner but cannot get anything useable except for 80m. Here we are able to tune the SWR right down.

Questions???
Would we be better without that balun?

Is the fact that the dipole is still too low and close to the guy wires (but not touching) our problem?

Any suggestions please??

Thank you.
Bob

Amateur Radio Newsline™ Report 1391 – April 8, 2004

Amateur Radio Newsline report number 1391 with a release date of Friday, April 9th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. It’s ham radio versus BPL in upstate New York. Hear the racket for yourself on Amateur Radio Newsline report number 1391 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIFGHT: HAM RADIO VS. BPL IN PENN YAN N.Y.

If you have been wondering what Broadband over Powerline interference will do to your ability to communicate on the high frequency bands, here is a very graphic illustration. Take a listen:

--
Penn Yan NY Audio - BPL Noise
--

That recording of the 15 meter phone band was recently made by Dave Hallidy, K2DH, operating mobile in Penn Yan, New York and posted to the Rochester VHF Society website. It was made the weekend of the CQ WPXSSB Contest using a Yaesu FT-100D transceiver, a Tarheel Screwdriver antenna and recorded at a time when the band was loaded end to end with high power contest stations. And while you cold detect a few of them, the majority were covered up by the BPL grudge.

--
Penn Yan NY Audio With Signals Covered Up
--

In an Internet posting Mark Hoffman, K2AXX, who is Chairman of Rochester group described it as frightening to hear. He encourages all ham radio clubs and other organizations to contributed to the ARRL BPL Defense Fund as a way of fighting this threat to the ham radio bands. (K0BC, K2AXX, K2DH, QCWA)

**

THE BPL FIGHT: TIME TO GO TO COURT?

And Hoffman is not alone in his concern. Others on the Internet are circulating a more drastic approach. Some hams advocate taking the matter to court and try to have the interfering BPL providers charged with being a public nuisance or as a threat to our national security. (Various Internet Posts)

**

ENFORCEMENT: UTILITY WARNED TO CLEAN UP RFI

An electric utility has been told for a second time to locate and fix an interference problem to a ham radio operator. Amateur Radio Newsline's Bruce Tennant, K6ZW, has more:

--

The FCC has sent a second letter to an energy provider warning it to clean up interference to a ham or face punitive action. The notice was sent directly to Wayne H. Brunetti who is Chairman, President and Chief Executive Officer of Xcel Energy based I n Minneapolis, Minnesota.

In his letter the FCC tells Brunetti that the agency notified him back in December of 2003 that it has received complaints of harmful radio interference possibly caused by equipment operated by Xcel Energy. That this interference has been reported by a ham living in Wellington, Colorado and that Xcel had been given 60 days to let the FCC and the ham know what steps were being taken to resolve the problem.

The FCC says that while Xcel did comply with its directive to respond, but as of the date of the latest letter the harmful interference reported to its office still remains unresolved. So the FCC told Brunetti that the company had 30 days to let the regulatory agency know what action Xcel has taken, or intends to take, in order to identify and correct the source of these radio emissions if they are being caused by its equipment. If Xcel fails to comply it could face enforcement action.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

As we go to air there is no word if Xcel's Burnetti has responded to the FCC. (FCC, RAIN)

**

THE BPL FIGHT: OPPOSITION GOES PUBLIC IN SOUTH AFRICA

BPL is also a big concern in South Africa and that nations national ham radio society has voiced its concern to the public about the introduction of Broadband over Powerline Communications in that nation. SARL -- the South African Radio League did this during the program "Technologic" which aired on Africa's D-S-T-V Business Channel.

Society president Graham Harlett, ZS6GJH, was interviewed at the National Amateur Radio Center. He said that the SARL is opposed to Power Line Communication because of its inherent interference to High Frequency radio communication. He noted that the interference is not limited only to frequencies used by Radio Amateurs. That it includes the military, civil emergency agencies and some broadcasting stations as well.

Harlett, says that extensive tests carried out in Europe, the USA and Japan has clearly shown this. A transmission line that carries power will become like an antenna at higher frequencies and render the high frequency spectrum unusable.

Harlett, who is a managing director of a South African consulting company voiced another concern as well. One that has not really been talked about in the United States. That of ingress to Broadband over Powerline systems from other radio spectrum users including hams. Harlett says that radio transmitters in close proximity to users of BPL are likely to cause interference to them because of the antenna effect of the long, unshielded powerlines.

Technologic was broadcast on Monday March 29th and has been repeated twice since its initial airdate. (Q-News)

**

HAM RADIO IN SPACE: SOLVING HAM-SAT INTERFERENCE

Meantime, the subject of interference to ham radio satellite was one of the topics at the recent meeting of the IARU Region One VHF Managers held in Vienna. Bill Pasternak, WA6ITF, reports:

--

As a result of research performed by OZ1MY, it now been shown that QRM that is occurring to ham radio satellites. Its primarily but not exclusively to 145 MHz satellite uplinks and mainly occurs when the birds are flying over Africa and the Middle East.

According to AMSAT, IARU Region 1 has a Monitoring Service which has been active for some years but which has, up to now, concentrated on frequencies below 30 MHz. In view of the wide area of QRM that can be caused by satellites and their ability to relay signals across international borders, the monitoring team has now agreed to scrutinize the satellite subbands as well.

Right now, what is needed are regular reports detailing instances of interference to the ham-sats along with audio files to back up each claim. The audio files will enable more precise identification of accents and dialects of those heard interfering. Hopefully, this will be a first step in getting those causing the interference off the satellites and off the ham bands as well.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF, in Los Angeles.

--

The IARU Region One Monitoring Service team is said to have good contacts which are used daily to remove intruders from the High Frequency bands. Hopefully they will be able to do the same on VHF and UHF as well. (AMSAT, Others)

**

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N8JFA X-WARN Repeater serving

Xenia Ohio.

(5 sec pause here)

**

ENFORCEMENT: FCC INVESTIGATES "PERFECT FIT"

Back here in the United States, the GCC Communicator reports that the FCC has launched an investigation into mattress warmer switching power supplies manufactured by Perfect Fit Industries. According to CGC, these supplies were never Part 15 RFI tested
and have been shown to create large amounts of problems to radio reception. (CGC)

**

CB NEWS: VK CB TELNET NODES ON THE AIR

Some interesting news about C-B -- Citizens Band radio -- down-under. Unlike the United States where C-B operation is hap-hazard with no structure, Australia has a CB Packet Radio System that rivals anything that ham radio has ever set up. And now, it is being linked over the Internet to C-B operations in other nations including many Europe. This is making it possible for Australian C-B’ers to connect with numerous other C-B stations throughout the world using radio and Telnet. Q-News Graham Kemp, VK4BB, has the nodes and the frequencies:

--

AUS002 Warren reports in Australia there are so far several CB Packet Radio Nodes and BBS's. These are AU4BNE Node 27.225 Usb Brisbane Q'ld, AUS011 BBS 27.225 Usb Brisbane, AU6PER Node 476.950 Fm Perth W.A and AU6BBS BBS 476.950 Fm Perth.

For the Amateur Radio Newsline, In Graham Kemp, VK4BB, of Q-News Australia.

--

So if you are scanning the 11 meter Citizens Band and hear digital signals, now you know exactly what they are. (Q-News)

**

RESCUE RADIO: NEW NYC ARES WEBSITE

Some good news out of the Big Apple. The Public Information Officer for New York City District ARES reports that the group has a new web site up and running. Among its features are links to each of the city’s 5 borough ARES operations, a contact list of borough District Emergency Coordinators, a news page and much more.

Want to see it? You can. Its in cyberspace at www.aresnyc.org (K2VMR)

**

RADIO LAW: CABLE MAKES DECENCY OFFER

The cable television industry says that it will provide free equipment to allow subscribers to block unwanted channels. This in reaction to efforts on Capitol Hill to curb indecent programming.

Robert Sachs, president of the National Cable and Telecommunications Association, announced the plan at a recent gathering of cable industry executives. The offer is directed to about half the nation's 70.5 million cable subscribers who don't have cable boxes that can be programmed to block certain channels or programs.

The companies agreeing to the plan include the 10 largest in the country and reach 85 percent of all cable subscribers. (Published reports)

**

RADIO ON THE MOVE: WWVA MAY LEAVE WEST VA

Famed AM broadcast station WWVA in Wheeling, West Virginia may soon be heading to a new QTH. This, as Clear Channel Communications confirms that the company has filed an application with the FCC to move long-time 1170 KHz Wheeling radio station out of the state of West Virginia.

According to a report in the Wheeling News-Register, Clear Channel Communications Wheeling Vice President Scott Miller said the company has submitted an application to move the radio station to Stow, Ohio. This is a town located just north of Akron. Miller said it has not been determined whether WWVA will actually be leaving Wheeling, and noted that approval of such applications are extensive.

Broadcast pioneer John Stroebel brought WWVA on the air on December 13th, 1926 using home built 50 watt transmitter set up in the basement of his Wheeling home. By 1929 WWVA had increased power to 5000 watts and became one of the most listened to stations in the East. And, for many years before Clear Channel Communications bought it, WWVA held the honor of being one of the last clear channel coast to coast broadcasters left in the United States. It also helped to make the city of Wheeling famous, worldwide. (Listener reports confirmed by NRCDXAS)

**

HAMFESTS AND CONVENTIONS: VISALIA INTERNATIONAL DX CONVENTION

On the convention circuit, the 55th Annual International DX Convention sponsored this year by the Southern California DX Club will be held April 23 to the 25th. This is the worlds premiere gathering of hams interested in DX and DXing on any band from DC to light. A show that attracts attendees from Asia, Europe, Africa and Oceania as well as from across the United States.

Scheduled events include a contest forum, antenna forum, DX forum along with seminars for everyone from the newcomer to DXing to the seasoned pro. The top of the line manufacturers will be there on their own display midway where you can talk to the people who design and use the best of DX equipment made.

As in previous years, the venue is the Holiday Inn in the city of Visalia, California. For full details visit www.scdxc.org/visalia/ on the World Wide Web. (SCDXC)

**

HAMVENTION 2004: AMSAT EVENTS

Two more special events timed to coincide with Hamvention 2004 to report this week. The Third Annual AMSAT "Pizza 'n' Suds" party will be held Thursday evening May 13th. Again this year the venue will be Marion's Pizza at 1320 North Fairfield Rd. The party will begin at 1830 and go until the last pizza is gone! Food will be ordered from the menu and drinks are available at the bar.

Also, the AMSAT Banquet will be held Friday evening at 1800. Location is the Amber Rose Restaurant at 1400 Valley St. in old north Dayton. As with past years the meal will be a buffet with a price of $25.00 per person. Reservations are required and the banquet is limited to 90 people maximum. Please contact Nancy Makley for reservations. Her e-mail is KC8GYW@amsat.org. (N8NUY)

**

HAMVENTION 2004: MEDIA CREDENTIALS

Still with Hamvention 2004, this to members of the working press who are planning to cover the event for commercial television, radio, newspapers or magazines. Media credentials are available to those organizations planning to send reporters. Complete information and a downloadable electronic application are on line at www.hamvention.org. Just scroll down on the left side of the page and click on the word Media. When the page loads, click on the word Media Credentials and follow the instructions that appear. (Hamvention(r))

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WITH NEWSLINE: NEW SEATTLE ACCESS NUMBER

This note to listeners who get Newsline by telephone access from Seattle. Joybubbles, WB0RPA, tells us he has a new easy to remember number for that line. Its area code 206-333-6397. How is that easier to rember? Try it this way: 206-333-NEWS. And we thank WB0RPA for the information and for sponsoring the line. (WB0RPA)

**

HAM RADIO IN SPACE: ECHO STILL NEEDS $48,000

Turning to ham radio in space, AMSAT reports that as of March 30th it has raised $61,988 of the $110,000 needed to launch the new Echo ham radio satellite. That leaves about $48,000 still needed before the current target launch date of this coming June 29th. Go to www.amsat.org to find out how to donate to this very worthy project. (AMSAT)

**

HAM RADIO IN SPACE: PC-SAT 2 READY TO FLY

Also word that PCSAT 2 has passed its final outgassing tests putting it one step closer to launch. These outgassing tests are some of the most stringent in the space program. They are designed to protest crew members from fumes that might arise out of materials used to construct anything going into space.

Commercial manufacturers who spend millions of dollars to develop space safe materials might want to take a lesson from the hams. All the parts in PCSAT 2 are off-the-shelf ham radio items. The new bird uses Kantronics TNC's and Hamtronics transmitter and receiver boards that include all of the original plastic parts.

PCSAT 2 will go into orbit on the first shuttle when they return to flight next year.   Additional information about the PCSAT 2 mission is available at http://www.ew.usna.edu/~bruninga/pcsat2.html (ANS, WB4APR)

**

WORLDBEAT - URUNGA - UGANDA: NO IT WASN’T APRIL FOOLS

Turning to news from around the world we have a correction on a sound-alike from last week. No, it wasn’t an April Fools joke. Again, here’s Q-News Graham Kemp, VK4BB:

--
Audio report only. Hear it in the audio newscast at www.arnewsline.org
--

So how did this one happen? Here is a clue. Try typing Urunga into your spell checker and see what it spits out. This one simply got away in the wee hours of the morning. (Q-News)

**

WORLDBEAT - HOLLAND: SKED CHANGES AT RADIO NETHERLANDS

This for Radio Netherlands listeners in North America. As of Sunday 4th April the station has dropped its 1200 UTC shortwave transmission on 11.675 MHz. Also, last week the station broadcast its morning program on shortwave at both 1100 and 1200 UTC due to the discrepancy in the starting dates for daylight saving time. From Sunday it will be on shortwave for one hour at 1100-1200 UTC on the afore mentioned 11.675 Mhz. (Radio Netherlands)

**

WORLDBEAT - EUROPE: THE 2004 SIX METER MARATHON

The Rientola Radio Amateur Club, operators of station OH3AG is inviting hams world wide to participate into the first Global Six Meter Marathon. The objective of the contest is to work as many DXCC countries as possible between May 8th at 0000 UTC and August 8th at 2400 UTC, doing so on six meters band. The results of this contest will be published during Tampere Six Meters Forum on August 14th when the Magic Band enthusiasts abroad will meet. You can follow this contest and get more information on-line at www.50mc.tk (RSGB)

**

DX

In DX, F5NQL says that he has been receiving many QSLs for the 5V7C Togo Dxpedition, but he is not the QSL manager for this operation. The correct QSL manager is Franck Savoldi, F5TVG, whose address is PO Box 92, 94223 Charenton Cedex, France. F5NQL is the DX editor for the French magazine Megahertz. (RSGB)

On the air, SM1TDE will operate from Tanzania mainly on CW, RTTY and SSB. He will be signing his call portable 5H3 through the 18th of April. QSL as directed by the operator. (RSGB)

**

THAT FINAL ITEM: HAM RADIO AND THE AMBER ALERTS REVISITED

And finally, an update to our story two weeks ago about AMBER Alerts. We mentioned that for the most part ham radio seemed to have little interest in this important public notification system designed to help find the victims of kidnappings. Now we learn of at least one Amateur Radio club that's at work preparing to handle AMBER Alerts. It's located in Eastern Pennsylvania where our own Amateur Radio Newsline's Mark Abramowicz, NT3V, is based:

--

Mel Salzman, W-3-M-E-L is the force behind the Dauberville DX Association in Reading, Pennsylvania, getting connected to the AMBER Alert system.

Salzman, Dauberville's president, says he first became interested in AMBER Alert about a year ago and began searching the Internet for information. The system enables law enforcement to issue bulletins to the public about missing or abducted children.

In some states, messages are transmitted by commercial radio stations similar to an Emergency Broadcast System message. AMBER Alert also relies on highway message boards and cable-television systems to get out information.

Its goal: To enlist thousands of pairs of eyes - whether they be motorists or truckers or neighborhood and community residents - to be on the lookout for the kidnapper of a child.

Salzman says he convinced the Dauberville group to put up a "ticker" or scrolling message on the club's website - D-D-X-A dot o-r-g, to display AMBER Alert information.
Salzman also says he has his home computer hooked up to receive instant AMBER Alert notifications, paying particular attention to Pennsylvania, New Jersey, Delaware and Maryland.

Salzman says his next step in connecting the Amateur Radio service to this effort was getting clearance from the club and the blessing of the FCC to transmit AMBER Alert information as a Q-S-T over the Dauberville group's repeaters.
"We have three repeaters," Salzman explains. "We can link all three repeaters if necessary and actually read the description, license plate number, whose been taken, what the guy looks like, whatever information comes through on my e-mail. That's what I'll put out on the air."

Salzman says the instructions are clear to any ham operator receiving the information and making a possible sighting.

"Call your local police, call 9-1-1 and give them the information," Salzman says. "If you happen to see that car or whatever description is out there, the car, what the driver looks like, call the police immediately."

Salzman says the Dauberville club has a modest, active membership, but many others in the region as well as those passing through the area use its repeaters and are supportive.

"We do have an active membership of, I would say, 20-25, and then people that they talk to," Salzman says. "You know how that could just snowballs. Like I said, the more people hear it, the more people are going to be looking, too."

Salzman says he hasn't publicized the Dauberville club's involvement with AMBER Alert. But Salzman says he's now preparing to reach out to other local clubs in the region as well as the Berks County ARES/RACES unit.

Salzman says he's also working to contact local law enforcement officials in greater Reading area to let them know ham operators are prepared to help by relaying AMBER Alert information.

So far, he says, the AMBER Alert system hasn't been activated much in this region. Salzman says that's a good thing. But, he says, the hams are ready if needed. Salzman says February's abduction and murder of 11-year-old Carlie Brucia in Sarasota, Florida affected him and others. Auto mechanic Joseph Smith is awaiting trial in connection with her death.

"I'd just like to really see this get going because it is extremely important. It just tears your heart out when you see these kids being abducted, especially with Carlie (Brucia), like when you find them and they're gone already. So, the more people involved, the better the results are going to be."

AMBER Alert was created seven years ago in memory of Amber Hagerman of Arlington, Texas. The 9-year-old was kidnapped while riding her bicycle near her home and later found murdered.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

If you want to know more about how you can involve the Amateur Radio service in your area in America's Missing: Broadcast Emergency Response - what AMBER stands for - take your web browser to www.missingkids.com. Then click on the words AMBER Plan. Getting a ham-radio assisted AMBER Alert plan started in your town could eventually save a child's life. (ARNewsline(tm))

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That’s in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Don Wilbanks. AE5DW, saying 73, a happy holiday and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Replace the coax with 450 ohm ladder line, connect it directly to the dipole legs, and use the balun to connect the ladder line to your tuner (unless you're using a balanced tuner like the Matchbox or your tuner already includes a balun); you should be able to tune the resulting configuration on any band between 80m and 6m, though 80m tuning will be "sharp". If you're unable to do this, either subtract or add a 3-foot length of ladder line, and try again; I usually start with more ladder line than I need in case I need to do this.

If you're running 100W or less, you can substitute 300 ohm TV twinlead for the ladder line. I used this configuration to good effect from both FJ and KP2.

Unlike coax, ladder line or power-carrying twinlead should not be routed near conductive objects.

73,

Dave, AA6YQ

Stolen from 100 Ironwood Drive in Las Vegas, Nevada sometime between April 10 and April 11, 2004:

Two sections Rohn 25G Tower
One Rohn 25G Top section
One Rohn Roof/Eve Mount

One Hy-Gain TH7-DX 10/15/20 Triband HF Beam

One Ham-IV Rotor

Two homemade sloper antennas

One 440MHz business band Yagi

All of this equipment was formerly owned by Alan Foster, KB7UI and disassembled and purchased by Jason Creager, KC0ERG, before Al moved to Yuma, Arizona this weekend.

There are several items missing from the complete package, so if you hear of anything being "parted out" and think "That's odd. Why is THAT missing?" please contact me as I can identify all of the stolen items . If you know the whereabouts of this antenna, please contact me at:

StolenTower@cox.net

I'm really hoping that this was an honest mistake and that someone picked up the gear from the hiding spot at the house to keep it from being accidentally thrown away.

Please forward this message (in a nonannoying method :-) to any mail reflectors for ham organizations in the Western United States.

Thanks very much,
Jason

I have a Bird 43 wattmeter and am looking for a case.

I understand that the Bird CC-6 case, which holds the meter and
a handfull of slugs, is made by Pelican Products.

Can anyone advise what Pelican model this is?

eg Pelican 1200?1300? 1400? 1500?

I'm replacing all my tubes (6146B's and 12by7) with new ones. Using 6146W's for the finals. The reason is I'm seeing output drift. The output is maybe 80 Watts at the low bands to just barely hitting 100Watts at the high bands. I neutralized the finals as best I can and aligned the Tx drivers without any noticeable changes. But the thing I also noticed was that during my 10 second tune up, my wattmeter would show that my power was drifting downward by about 20 watts or so. My thinking is that maybe one of those big old caps is not holding the charge. I suppose the electrolytic dries up after 20 or so years. Does anyone have any comments on this before I start to replace components? One thing I'm going to do is check the bias voltages on the tube sockets and make sure they are within the noted voltages in the service manual.

Thanks for reading,

Jon

Ten Tec started it with the Orion introducing it but not having it available for almost two years. Icom got on the bandwagon last year at Hamvention with their IC-7800 which may or may not be availble any day now. Yaesu just introduced their unavailable FT-DX-9000. But what I want to know is when is Kenwood going to get on the bandwagon and announce a radio that isn't going to be available?!

It's a rhetorical question, Mr. Lachman. Some supporters of BPL say that there are no health risks involved, while some of the opponents say that there are documented cases of health risks. It's like the researchers and scientists paid for by the nuclear energy industry telling us that nuclear power is harmless to the general population. In fact, some of the bigwigs who support the transportation of nuclear waste say that nuclear material is safe even when the transporters are involved in a serious traffic accident.

What is your take on the issue, Mr. Lachman? Is there any documentation from other countries to prove or disprove the possibility of any serious health risks involved with the use of BPL?

From what I can tell this is not a similar format.
I believe the output of the RS80 is completely digital.

Just bought a Atlas 210x-Hooked to triband..very low SWR. But when I key the mike, I get a steady carrier in REC mode. Is it a carrier balance thing that needs adjusting? Appreciate any help you guys can give me.

Reggie

NO! The rf levels are too low. Any worry of that is silly. The only
REAL worries, are about how bad that mess will trash the HF and LOW
VHF bands. I've already come up with my plan, if my receiver is
assaulted by this unwanted rf in the area. It's simple. If my radio is
assaulted by BPL leakage, I'll just assault the bastards right back.
I'll turn my beam towards the power line, crank up my henry to full
power, and blow and go. I'll put that frigging BPL system on hold!
They will have so many data errors, a dial up connection will look
attractive. In order to "cure" their newfound problem, they will have
to clean up the leakage. If they want to keep me out, they will have
to keep themselves within. :) Very simple solution I think...

> in commercial and amateur/SWL communications.

Those idiots must have brain damage to believe that low a level of rf
would be a threat to health....Sounds like they have been doing "head
in the microwave" testing...MK

Then I guess the concerns raised by the Amherst Alliance in Federal Communications Commission Docket No. 03-104: Broadband Transmissions Over Power Lines (May 23, 2003; http://www.amherstalliance.org/filings/spectrum-powerline.doc), may just be hype. In page 10 of the Inquiry, the citizens' advocacy group petitioned the following to the FCC:

If BPL transmissions are ever authorized at all,
they should be authorized only after:

(1) The potential for interference with radio astronomy, shortwave radio equipment, Amateur Radio Service equipment and CB Radio equipment has been tested and measured, in experiments involving actual users of the affected frequencies; And

(2) The potential effects of BPL electromagnetic radiation on the health of exposed humans and animals has been fully assessed; And

(3) To the extent necessary for the protection of equipment and living things, effective and appropriate

> countermeasures, such as possible shielding of power
> lines, have been identified, evaluated and implemented.

I agree with the inevitability that massive interference will be created on most HF and VHF frequencies if or when BPL is implemented. I hope the naysayers in Europe and Japan who claim that BPL could cause long-term adverse health conditions are merely making an issue out of a non-issue. If this technology is going to be here to stay (it may not because of the complaints posed by ham/SWL operators relating to RF interference), then I want to be assured that my family and I will be safe from any potential health risks involved.

Occasional AB (Art Bell) Listener

These are RS80-15N Vaisala radiosondes. They use the old OMEGA navaid system which I *believe* has been turned off. There are two problems with using these out-of-the-box (besides the OMEGA problem). 1) propriatery encoding scheme - good luck finding out what it is! 2) the units come with a paper calibration tape that is run through a reader prior to launch. If you don't have the reader/interface/software you have NO idea what the response curve of the sensors is, and each one IS different. There's a company that sells an interface that repalces the vaisala sensors and lets you input several channels of analog data. Or you can pull off the vaisala sesnors and put a 555 oscillator on and use as a tracking beacon.

But really....do you need to have a temp reading to the 4th decimal place??

the decoding scheme is on the net....HOWEVER, you still must get it out of that 403Mhz FSK transmission...

The vaisala sonde mentioned does not provide that degree of resolution.

>
> the decoding scheme is on the net....HOWEVER, you still must get it

>
Please provide a URL for the decoding scheme. The sondes are tunable from
around 400 to around 416 MHz narrow-band FM. They do not use Frequency
Shift Keying modulation.

Here's what I found for the code itself:
http://apollo.lsc.vsc.edu/classes/met131/raob.html

Here's some German guys home brew kit on decoding it....haven't read the
entire page to see how it works:
http://www.qsl.net/dl3gaz/decoder/

I work for Environment Canada and have access to all sorts of "bad" sondes
(they just didn't pass the preflight sensor checks)....some of these have
the GPS capability....

But it's getting around the RF that I'm unsure of.

Haven't looked for a cct site yet!

I used to work for the National Severe Storms Laboratory in Norman, Ok. We had samples of just about every type os sonde ever made. The vaisala were very common because of government (National Weather Service) contracts. I used to have a manual that was made up by reverse engineering the sondes and the receiving equipment. I don't know where it is, but with some effort I might be able to get a copy. The newest sondes (and these are quite old) are tracked by the home station, via a multiplexed antenna array, and do not tracked by the location of the sonde. Special application (vaisala) sondes like drop sondes for hurricane work, or research projects, DO use gps now, but it's only a gps receiver, not a full gps engine. The sondes the Natn'l Weather Service use are all 1680MHz. There's a Canadian company that makes good RF modules, http://www.abacom-tech.com/home.htm . We wanted to use commercial off-the-shelf modules for a research project, but couldn't find any in the 400-406 MHz range. Abacom's stuff is 413MHz (or in other bands), and because they use SAW technology, they couldn't easily change frequency.

This looks like how to decode the output from a 'proper' decoder.

This is for the non-GPS ones I think.
The GPS ones transmit at least the GPS signal in digital format.
I suspect they also transmit the old format, but am not sure.

From what I gather, the RS80 GPS probably outputs psuedoranges.
This is not the same as positions, but is the relative time delays to
each satellite.
Combined with a knowledge of the satellite orbits (most normal GPS recievers
can tell you this) this will give you a position.
Numerically, this'll probably look like a satellite number (5 bits), and then
a several bit (14?) psuedorange.

You cannot get position from this signal directly.
If you know the orbits of the sateelites and the approximate position
(+-10km?) of the sonde, then you can track movement accurately.
If you lose the signal for more than a very short time, you can't get
the movement right.

It sounds VERY interesting !!!
Despite the fact that RS80-15N is quite old, the coding algorithm
for PTU is always the same, in order to keep compatibility with old
ground based equipment.

Yes, we looked for modules, too, and we got same answer.
Anyway, you can receive the sonde with any radio scanner and a good
antenna.
I asked a friend to modify an amplifier and antenna used for hamradio
band
close to Vaisala one, and we got excelent results with a very cheap
equipment.

No, but if you do not use calibration coefficients from tale, you get
meaningless values.

> the decoding scheme is on the net....HOWEVER, you still must get it out of
> that 403Mhz FSK transmission...

PTU data is not FSK encoded. It is transmitted as analog modulation in
the
7-10 Khz range
(or 0.7 - 1 KHz range for narrow band version, such as RS80-30x sonde)
Data from additional sensors, such as Ozonesonde, are trasmitted using
 AFSK modulation, in the lower range (about 2000 Hz).
You can decode ozone signal using an old Bell 103 modem.

The satellite data are called ephemera, and I believe these are stored in the GPS engine and then calculated-for-now using the time/date encoded in the GPS transmission. I know the vaisala system had a "home-base" GPS reciever. We had problems with some GSP-instrumented sondes that were tethered below research packages because of severe swaying. I don't know if it was because the GPS receiver in the sondes lost lock or of they couldn't calculate the right data. When they regained lock there would be skewed data for several seconds.

I know, I used the phrase because I was very unsure of my spelling of
ephemeris. (?) :)

> the GPS engine and then calculated-for-now using the time/date encoded in
> the GPS transmission. I know the vaisala system had a "home-base" GPS

They are transmitted from the satellites.
There are two basic forms, a crude one that works for a few hours, or
a more accurate one that works for several weeks (?).
The date/time is transmitted every 6 seconds.

> reciever. We had problems with some GSP-instrumented sondes that were
> tethered below research packages because of severe swaying. I don't know
> if it was because the GPS receiver in the sondes lost lock or of they
> couldn't calculate the right data. When they regained lock there would be
> skewed data for several seconds.

Ok, but you then just have tones don't you?  How do you decode the
tones....or did you decode them?

Hi All,

I just ran across an old DSI 3600A frequency counter at an auction for $1. I was hoping that I might be able to use this to help check the alignment on my old Swan 500CX. Problem is, it had no documentation with it and the only other freq. counter I have used was a radio shack handheld one w/the BNC whip. It has a pair of unlabeled PL-259 connectors on the backside. Only controls on the front side are the direct /pre scale selector for the .1 or 1 sec. gate. Also has an "oven" on it, which I am not quite sure what that exactly is.

Was wondering if anyone could comment on the use of this one. Sorry to sound so non-electronics savvy for an amateur op, but any help would be appreciated.

Thanks,
Sam Bradshaw
KB8ZZS.

The "oven" is for keeping a cup of coffee warm while talking on 160 meters
on a cold winter night....
Actually..the oven keeps the timebase osc. stable (once it gets to temp). 2
inputs...more than likely it has a direct and prescale input...Eddie

You can already do this in your own home. The Screen Savers did
a segment on this just last week:
http://www.techtv.com/screensavers/products/story/0,24330,3645563,00.html

The big issue is going to be security.

Hi There

I've come across a PA TUBE, of wich i need the specs and hopefully i can find them quick with your help....

It's an American Model RCA 813A PA Tube.... Do you have the specs or du you have a URL from wich i could find that info, i would be very gratefull....

TIA

As someone else said, ebay is an indicator of what buyers will pay for used items.
For a price on
new tubes, try RF Parts.

I think they are listing ratings quite a bit less than the US 813. The plate dissipation is over a 100 watts and they list the output power as 100 watts. (0.1 KW). Course they may be running class A. I think the ones I've seen were rated at close to 3000 volts on the plate and on the order of 250 to 500 watts out depending on class and duty cycle. I used to run the legal limit with a pair in grounded grid. (Yup, tetrode in GG <G>). You could darn near read a newspaper from the light off the plats.

One of the locals just picked up a pair for $10 or $15 each. OTOH that is about the cheapest I've seen them.

As others have mentioned I'd watch e-bay and see what they are going for.

Amateur Radio Newsline™ Report 1389 – March 26, 2004

Amateur Radio Newsline report number 1389 with a release date of Friday, March 26th, 2004 to follow in 5-4-3-2-1.

The following is a QST. A popular talk show host says “No” to BPL and REACT gives its support to the Amber Alert system. Find out the details on Amateur Radio Newsline report number 1389 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: ART BELL W6OBB VS. BPL.

If it did not know before, a large portion of the American public is now keenly aware of the danger that Broadband Over Powerline Internet access poses to the nation's emergency communications infrastructure. And you can thank radio talk show host Art Bell, W6OBB, and ARRL President Jim Haynie, W5JBP, for bringing it to everyone's attention. Amateur Radio Newsline's Mark Abramowicz, NT3V, had an opportunity to speak with the internationally famous radio talker and has the rest of the story:

--

From the high desert in the great American Southwest, a call to arms has been sounded.

From his home base in Pahrump, Nevada, W6OBB - better known to millions of commercial radio listeners as Art Bell - has called on America to stand up and fight what he charges is the greatest threat to the nation's security - Broadband Over Powerline.

Bell charges BPL will cripple the nation's emergency communications backbone - striking at the heart of homeland security.

Bell picked up the charge against BPL during his radio show broadcast Saturday, March 20 in which he introduced ARRL President Jim Haynie, W5JBP to his audience.

Haynie and Bell pointed out the BPL interference threat extends far beyond the amateur bands. Both Haynie and Bell warned that many police and fire companies, federal disaster agencies and the FBI and the military would be rendered helpless if BPL is rolled out across the nation.

Bell says he's especially worried about the potential of another major attack against the United States and what BPL would do to our nation's ability to communicate.

"The emergency communications, my God, aircraft, amateur radio, FEMA, any other emergency agencies that are going to have to rely on HF communications," Bell says.

"We certainly can't depend on satellites. As a matter of fact, if we should get into a conflict, some sort of major conflict the satellites will be the very first thing that will go. And minus satellites for communications, we're dependent on the good old-fashioned shortwave bands, VHF, UHF, the whole schmear to keep our nation talking. And in a time of national emergency we need to be able to talk to each other."

Bell says he's appalled at the behavior of the Federal Communications Commission. He says they're acting like cheerleaders instead of regulators. He charges corporate greed is driving BPL and ignoring the studies showing the technology - as proposed on the HF bands - won't work without causing massive interference.

"I've always had the deepest respect for the Federal Communications Commission," he says. "However, I think in recent years, there've been a lot of changes at the FCC that include the fact that there aren't so many engineers at the commission any longer, but there are a lot of bureaucrats."

Bell says he believed after reading the Federal Emergency Management Agency's assessment of BPL that the findings would have been enough to shut it down.

"The FEMA filing was very strong," Bell says. "They essentially said, 'Look, our receivers and transmitters are not going to be able to function with BPL in place.' And, they specified the power levels they would have to go to continue to communicate and suggested the taxpayers can't, wouldn't be able to afford such changes.

"So, with that kind of filing, frankly when it came out I thought BPL was dead. Boy was I wrong!"

After doing more research, Bell says he decided to take the case to his listeners. And he says the only way to do it is to point out the risk to their safety.

"I don't think we're going to combat it by saying, 'Save ham radio." The public doesn't care enough and I'm sorry to have to say that, but that's what I believe," Bell says.

"I love ham radio. It's been my life. I've been a ham since I was 12. But the greater, larger American public just doesn't care enough about ham radio.

"And if they think they can plug in their computer to the wall and have instant internet, that's a more attractive idea to them than the guy down the block with a tower in the air."

Bell says his mission is clear: "I do a radio program on 500 radio stations nationwide, including the top 50 markets in the U.S., " Bell says. "And I'm going to do everything I can to drive this home as hard as I can that communications, and certainly ham radio is part of that emergency communications chain, there's no question about that.

"But emergency communications across the board are threatened by BPL."

Bell says all hams need to wake up and heed his call to action.

"We have to get to the larger media in America and, as hams, we have to make the general public, underline the word general public, aware that our emergency communications are threatened," Bell says. "The American public remembers 9-11. The American public knows what the continuing threat is.

"We've declared war against terrorism and why would we want to turn around and cripple our effective ability to wage war? And that's exactly what BPL is going to do."

Bell says if energized with information about BPL's risks to national security, millions of Americans can quickly become allies.

"We need to get the word out to the general public and begin to have them write to their congressmen, their senator," Bell says. "And that's the only approach that I see at this point with the juggernaut that is presently underway from the Federal Communications Commission and the (BPL) industry, the only way we're going to stop it is to make the general public aware of the threat."

Bell says there are other issues, including interference to TV channels 2 through 6, residual noise to the AM radio bands and virtual loss of CB bands used by the many truckers who listen to his show. He says there are also privacy issues, especially the potential of the government and large companies to track people and their habits and choices on a BPL system.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V in Philadelphia.

--

Bell currently hosts the weekend edition of the Coast to Coast AM. He also indicates that his presentation on Saturday, March 20th was only round one. He is lining up other guests to talk about the BPL issues in the near future. To find out when, keep checking the shows website at www.coasttocoastam.com. (ARNewsline(tm))

**

THE BPL FIGHT: HAM RADIO VS. THE WALL STREET JOURNAL

Meantime, a story in a recent issue of the Wall Street Journal about Amateur Radio’s stand against BPL is raising the eyre off many in the nations ham radio community. The item appears to take the position that radio amateurs are alone in opposing BPL. Also, that their doing do is holding back the flow of progress in technology.

You can judge for yourself by taking your web browser to http://tinyurl.com/357ye. That is if its still there by the time this newscast goes to air. (ARNewsline(tm))

**

RFI: ELECTRIC BLANKETS - A NEW CHAPTER FOR AN OLD PROBLEM

As if BPL was not enough, now there’s another source of RFI to worry about. Its things that keep us warm.

According to Roy Trumbull writing in the CGC Communicator, RF interference from electric blankets is another problem that can be added to a history of similar events. The ones caused by heating pad thermostats and the class of transformers used for door bells. Turnbull says that RFI from these devices can affect AM reception for quite a distance from the source.

Turnbull also adds this interesting aside concerning electric blanket safety. He says a little noted change in product design took place when there was that firestorm some years ago over magnetic fields from power lines. The electric blanket makers got a jump on things by switching to twisted pair wiring. This says Turnbull solved the problem of the significant magnetic fields that were produced by the earlier blanket design. (CGC)

RESCUE RADIO: REACT AND THE AMBER ALERT PROGRAM

Ham radio appears to be leaving itself behind in the area of responding to notices of kidnapped children called Amber Alerts. Meantime REACT and other citizens radio organizations are taking the point position in spreading word of these vital searches. Amateur Radio Newsline’s Bruce Tennant, K6PZW, takes a look at how REACT has gotten involved:

--

Nobody seems to know why hams appear to have no interest in the Amber Alert program, but other civic minded radio services are not standing still. And the April issue of Popular Communications magazine is highliting REACT as being one of those jumping in to providing communications for these alerts and searches.

The magazines Info Central column highlights the activities of REACT teams across Ontario Canada and the northern United States. This, as they responded to an Amber Alert issued by the Ontario police after Cecelia Zhang was abducted in Toronto.

Ron McCracken who is past President of REACT told Pop Comm that they were given details of the alert and were asked to broadcast it on C-B channel 19 to truckers passing along the highways. The alert included details of the kidnap vehicle and the victim along with the suspects.

The broadcasts began at about 5:30 in the evening and went on through midnight. McCracken says that CB radio was combined with computers and e-mail to spread the word far and wide in a very short time. This allowed truck drivers all along the border to keep an eye out for both the little Cecilia and her abductor.

According to McCracken, this was REACT’s first response to an Amber Alert and in his estimation it went very well. You can read the full story starting on page 5 of the April issue of Popular Communications magazine.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

The Amber Alert was created in 1997 as a tribute to 9-year-old Amber Hagerman.

She was kidnapped and brutally murdered while riding her bicycle in her hometown of Arlington, Texas.

If you want to know more about how you can start an Amber Alert Plan in your area and involve your radio hobby, it can be found by taking your web browser to www.missingkids.com. Then click on the words Amber Plan. (PopComm, ARNewsline(tm))

**

RESTRUCTURING: SAN MARINO AND NORWAY EXPAND 40 METERS

Two more nations have gained spectrum at 7 MHz. Both are in Europe. Jeramy Boot, G4NJH, in Nottingham in the UK has more:

--

Two more European countries have gained access to the 7100 to 7200 kHz segment of the 40-metre band. San Marino, T7, has authorised amateur radio operation in the 7100 - 7200 kHz band on a Secondary non-interference basis, with effect from the 25th of February.

The Norwegian Post and Telecommunications Authority has also announced that Norwegian radio amateurs can use frequencies in the segment 7100 - 7200 kHz with secondary status starting from the 1st of April.

This is in addition to the existing segment 7000 - 7100 kHz where radio amateurs have primary status. The maximum transmitter output power in the 7100 - 7200 segment will be 100 watts in Norway, and the maximum bandwidth 6kHz.

Jeramy Boot, G4NJH.

--

Croatia was the first European country to expand its 40 meter band. That happened last December. (GB2RS)

**

RESTRUCTURING: ARRL AND NCVEC PETITIONS ASSIGNED RM’S

Here in the U-S, our FCC has assigned rulemaking numbers to separate petitions for license restructuring and changes in code requirements filed by the ARRL and the National Council of Volunteer Examiner Coordinators. The ARRL petition has been designated RM-10867 while the NCVEC petition is now RM-10870.

Two other petitions were released for comment at the same time - RM-10868 was filed by the Radio Amateur Foundation, and RM-10869 by Ronald Lowrance of Georgia. Both also seek changes in amateur licensing requirements, particularly with relation to the code exam.

All petitions are available online via the FCC's Electronic Comment Filing

System website. The comment deadline on all four petitions is April 24, with reply comments due 15 days later. (CQ, W2VU)

**

ENFORCEMENT: WARNINGS TO TWO TRUCKING FIRMS ABOUT 10 METER OPS

The FCC has warned the owners of a Bristol Pennsylvania trucking company to get their personnel off of the 10 meter Amateur band or face some expensive consequences. In a letter to Cassidy's Express the FCC says that it has information that one of the company’s tractors pulling a "CAI" trailer on Interstates 476 N and 76W in Pennsylvania, was the source of unlicensed radio transmissions on the 10 meters.

The incident took place last October 9th between 8 AM and 8:30 AM local time. The Commission has informed Cassidy's Express that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act. That it could and will subject the operator to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment.

For those not aware, unlicensed operation carries a fine of $7,500 to $10,000 for each instance charged. A similar letter was sent to CLR Transport of Saluda, North Carolina warning of unlicensed 10 meter operation from one of their trucks on Interstate 85 between Gastonia and Kings Mountain, North Carolina on July 14, 2003. (FCC)

**

THE CLUB SCENE: USS HORNET ARC NOT DISBANDED

Contrary to rumors, the Amateur Radio club that supports museum ship U-S-S Hornet has not been disbanded. This, according to Tom McGlinn, KO6HA who is the trustee for the NB6GC callsign and the new president of the USS Hornet Amateur Radio Club.

Writing on the QRZ.com websire, McGlin says the original story of the club being dissolved is untrue. He says that the group is still active and aboard the USS Hornet and that all QSL requests will be handled as in the past. Please direct any inquiries concerning the USS Hornet ARC QSL program to ko6ha@earthlink.net (QRZ.com)

**

ON THE WEB: BIG UPGRADE AT QRZ.COM

The servers that provide you the QRZ.com website have been relocated to the company’s hosting facility in Phoenix, Arizona. The new location affords QRZ.com with 24 hour a day, 7 days a week backup power and a very fast 10 Megabit connection directly to the Internet backbone.

QRZ.com owner and administrator Fred Lloyd, AA7BQ, gave special thanks to Chris Radicke, N7TWW and Mark Krotz, N7MK, who assisted him in transporting the computers, building the cabinet shelves, pulling cables, and in generally making the transition go as smooth as silk. Lloyd says that thanks to some great prepatory work QRZ.com was out for no more than 2 hours during the location changeover. (QRZ.com)

**

ON THE WEB: WWW.SCOTHAM.NET

WWW.SCOTHAM.NET is a new Internet portal concerning ham radio in Scotland. The aim of the site is to further the interests of Scottish hams in all aspects of Amateur Radio. The portal also presents an interesting view of life in Scotland as it pertains to ham radio. Again that U-R-L is WWW.SCOTHAM.NET and you will find it on the World-Wide-Web. (MM0DFV)

**

WITH THE HANDI-HAMS: 3905 QSL BUREAU

The Board of Directors of the 3905 Century Club has unanimously approved the establishment of a QSL Bureau and Manager. This, to support any Handi-Ham members that wish to participate in the club's nets.

Handi-Ham members can use the bureau a number of ways. This includes the actual completion of cards for the contacts they make on 3905 Century Club nets.

The 3905 Century Club has nets on four bands and all modes including SSB, CW and Digital. More information, including net schedules can be found at www.3905.com. (Handi-Hams)

**

CONVENTIONS AND HAMFESTS: ARRL AT NAB IN APRIL

Turning to the ham radio social circuit, the ARRL will be visible at the upcoming National Association of Broadcasters convention. Amateurs visiting the exhibits at the Las Vegas Convention Center are invited to stop by Lobby Booth 9 where the ARRL will be exhibiting its latest publications and other materials related to the hobby.

The booth will be staffed by ARRL national officers and volunteers from the Las Vegas area headed up by Bill and Carolyn Cornelius. They are K8XC and K9XC respectively. The booth will also be able to provide information on the April 21st NAB Ham Radio Reception sponsored by Heil Sound.

Bill Cornelius does have a limited number of complimentary VIP Exhibits Passes. Requests for them go by e-mail to k8xc@aol.com. (K8XC)

**

HAMFESTS AND CONVENTIONS: EMCOMMWEST IN MAY

And word that the combined EMCOMMWEST 2004 conference and the Reno Spring Hamswap is slated for the weekend of May 22nd to the 23rd. This years theme is Amateur Radio Emergency Communications in the 21st Century and will feature appearances by knowledgable guests that include Dan Miller, N-3-U-F-G from ARRL Headquarters. His presentation will include information on the ARRL Emergency Communications on-line courses as well as an overview of how amateur radio interfaces with The Office of Homeland Security.

For complete up to date information, location and on-line registration for EMCOMMWEST and the Reno Spring Hamswap, take your web browser over to www.emcommwest.org. Planners say that the site will be updated frequently with new information as it becomes available. (Emmcom West)

EMERGING TECHNOLOGY: PROFESSOR SAYS ISP'S SHOULD POLICE CONTENT

A new cyberspace business plan from a legal scholar says that Internet Service Providers should become cyber cops and force everyone to pay a royalty fee for every song, movie or book they download to their personal computers. Bill Pasternak, WA6ITF, has the details:

--

Lon Sobel is a professor at Loyola Law School and an expert on copyright and entertainment law. He says that Internet service providers such as America Online and Earthlink must become digital police and send customers monthly bills based on how much copyrighted material they download.

Under Sobel's plan, consumers who download expensive software such as Adobe Photoshop could pay as much as $600, while someone who grabs a single song could be charged as little as 49 or 50 cents. These charges would be in addition to the usual dial-up or broadband monthly connection fees.

Critics of the plan include computer experts, Internet service providers and -- believe it or not -- the entertainment industry. Bob Blakley, a computer scientist and security expert at IBM, says that a clever hacker could write computer code that would attaches itself to every piece of copyrighted content on the Internet. Then it could funnel some of the cost of the download to the hackers personal bank account.

Blakley and others say peoples attitudes is one of the biggest challenges in digital rights management . That an entire generation of consumers has become used to free music and other content posted on the Internet. He says that they will do anything it takes to get content for free. This includes breaking the law to avoid paying $10 to $20 for a compact disc, DVD or electronic book.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

A senior executive at Verizon Communications is quoted as saying that Internet service providers will reject the plan noting that few companies could keep track of every downloaded item or determine the value of every file passing through their system. (Published news reports)

WORLDBEAT - CANADA: NEW CONTEST MANAGERS

Radio Amateurs of Canada has announced the appointment of Sam Ferris VE5SF, Bart Ritchie VE5CPU and Bruce Rattray VE5RC as managers for the Canada Winter and Canada Day contests. They replace retiring managers David Shipman, VE7CFD and the Moncton Seniors Amateur Radio Club who have performed this duty for the past several years. (RAC)

**

WORLDBEAT -NEW ZEALAND: NZART COUNCIL APPOINTMENTS

NZART President Peter Norden, ZL2SJ, has announced the appointment of Noel Rowe, ZL3GR, to society's Council. Rove is a second term councilor having served previously in the 1990's. He replaces Ted Minchin, ZL1MT, who resigned for personal reasons.

Another Council appointment is that of Joe Reed, ZL2AH who volunteered to take on the tasks of Reciprocal License Bureau Manger. He replaces the late Russ Garlick, ZL3AAA. (NZART)

**

HAM RADIO IN SPACE: K6DUE MEMORIAL ARISS EVENT QSL CARD UPDATE

Hams waiting for QSL cards from the K6DUE Memorial operating event, please listen up. Frank Bauer, KA3HDO, who is ARISS International Chairman says in order to save postage costs, the process being used for the special event certificates is this. The various regions such as Europe, Canada, USA, Russia and
Japan are collecting the QSLs and generating compiled lists of names and callsigns. These lists are then used to print the certificates and return them to the regions for direct distribution. Bauer asks that everyone be patient, indicating that it will be well worth the wait. (KA3HDO)

**

DX

In D-X, three German operators will be active as A35DA, A35DH and A35DJ from Fafa Island in Tonga through the 29th of March. Activity is on all bands from 80 to 10 meters on SSB, PSK 31 and RTTY. QSL as directed on the air.

Also, word that KE2SP is active on 10 through 20 meters from the island of Hydra. This, as SV8 stroke KE2SP. He will be there until the 15th of June. The island counts as EU-075 for the Islands on the Air awards program.

And the Ohio Penn D-X Newsletter reports that ZL1CT is planning to be active fro Chatham as ZL7V. This, from July 5th to the 15th. Activity will be on 80, 40, 30 and 20 meters using CW and SSB. QSL this one via N3SL.

(Above from various DX news sources)

**

THAT FINAL ITEM: A HAMVENTION 2004 RADIO ROAD INFORMATION SERVICE

And finally this week, if you plan to drive to this years Hamvention, there will be a special service to make your trip a bit more pleasant. This as Information Radio in Dayton, Ohio announces plans to provide Road to Hamvention announcements on Highway Radio 1610 AM. As you might expect, 1610 Kiloherrtz is the frequency and the person behind the idea is Norm Schrein, KA8PGJ.

--

Schrein” “For Hamvention, we are planning on putting some information in regard to directions to the Hara and hours of the hamfest itself. People coming into town can obviously get information via the ham repeaters, but we may be hitting people who aren’t hams at all or who do not have Amateur Radio equipment but who will pick this up in the loop and take in the hamfest.”

--

Information Radio is a service provided by the Emergency Communications Center Incorporated. This is a not for profit organization with which Schrein is associated. He says that stations like this are a lot more common than many people realize:

--

Schrein: “530 Khz is where to find a lot of the stations like this and then about 1610 through about 1700 Khz you will find a lot of these travelers information stations as well. A lot of them tend to be site specific. That is, if you go through Pennsylvania, you may hear something about one of the state or national parks or involving the roadways if its run by the Dept. of Transportation. Where ours is a little unique is that it is kind of all encompassing. It covers everything happening in the Dayton area from local parks and recreationb to people having a parade to events like the Hamvention.”

--

Schrein says that anytime you are headed to the Dayton area be sure to tune your car radio to 1610 kilohertz. Whether its trying to find your way into town or heading to the HARA Arena for Hamvention 2004, Information Radio will be there to serve you.

More information on information radio stations can be heard on this weeks Rain Report. Its at www.rainreport.com or landline at 847-827-7246. (ARNewsline (TM))

Hello,

I have been thinking about purchasing the MFJ-434 voice keyer to use for contests, Field Day, and I had a few questions for anyone who may own one. I downloaded the manual off of MFJ's web page and it mentioned that you need to set the internal jumpers for the proper voltage for your tranceiver's microphone if you are using any transceiver other than a Yaesu. I recently purchased a used Icom 720A that is currently being repaired by MTS in Washington state. The radio didn't come with the HM-7 hand mic, so I am probably going to have Scott Malcolm at MTS just put together another mic on the radio for me that has a pre-amp built into it that will work with the 720A. I was wondering if anyone knows what the proper voltage is for this microphone? The 434 listed voltage jumpers of something like 0, 2.5, and 5 Volts, but I'm not sure what the proper voltage for my mic would be, or even how to find out exactly. I have a VOM that I can use if I knew what I need to do to determine the mic voltage from the transceiver. Has anyone used the 424 with an Icom rig, or even with 720A, and can you tell me what I need to set the voltage jumper for? Is the 434 a good keyer, given MFJ's reputation, and where is the best place to buy one? I live about a two hour drive from Ten-Tec, so I was thinking about buying one from them in case I had a problem with it and had to return it. Can anyone help me with this one? Thanks for the help!

73,

Michael Brown KU4UV

Just wondering if anyone else caught the mention on Headline News on
Saturday about the addition of the "@" symbol to International Morse Code?
They mentioned the ARRL and ham operators who still use Morse Code to
communicate and the fact that the "@" symbol allows people to now add their
e-mail address when the mcommunicate via code. It was sure neat to see ham
ops get a mention on national news.

Orange County, NY ARES , a non profit 501(c)3 corporation is looking for equipment donations for use in converting a donated motor home into a mobile communications center. Anyone donating equipment will receive a receipt for the value of the donation for tax purposes. We need mobile HF, VHF, and UHF antennas, radios, 9600 BPS packet, GPS, ATV, battery power supplies, rechargers, Pentium II class laptops or better, and whatever else you might think could be useful
in a field environment.

Thank You,

Steve Fleckenstein

Any so called "tax write off" will be more than negated by the cost
of shipping crap to you idiot! And give me one good reason why
anybody would want to support *you* when our own home
towns, counties, and states are more in meed? What an idiot
to post a request like this.

Good luck. Sounds like some freebander did a number on it, and added
the echo, roger beep garbage to be one of the 'in' crowd. Make sure

he hasn't tweeked it out of whack.

>
> I hooked it up and briefly scanned the 10 meter band, using

10 is open at strange times, but usually you get Esporadic in the summertime, and I think we're sliding down the sunspot cycle now.

>
> I was using a mag-mount vertical on top of my van and got decent swr
> so I believe the antenna should be ok.

Should work just fine, but a good permanent mounted antenna is better. I'd go with a full lenght whip first, then a top-loaded fiberglass whip (longer the better), center-loaded, and then base loaded. I've used CB antennas I've found for a buck a throw at hamfests, just beware of running any sort of power through tiny loads in the antenna -- they'll get mighty hot mighty fast!!!

You'll enjoy 10, and listen in the evenings for local nets around 28.400. There is quite a bit of local activity thanks to the Tech plus licencees.

Another place to listen for band openings is on the FM segment. 29.600 is calling sinmplex frequency, and four repeater pairs, outputs on .62, .64,.66, and .68.

Best indication that 10 is open is if the CB band is one mass of hetrodynes.

news:<b71d3208.0402061829.140fda0f@posting.google.com>...
> Where should I start?

Find a local club, and a good ham who will act as an "elmer" to help you get started.

I'm fifteen, and I would like to build or buy a
> transmitter/reciever, does anyone have any suggestions? It would help
> if it were moderatly cheap...I don't have a lot of money.

At first I'd just get something that works reasonably well, like an older transceiver. You can get something like a Kenwood TS520 for not much more than $200-300 at most. Heathkit HW100's go for less than that and are quite serviceable. Solid state rigs with WARC bands tend to go $100 or more higher. Check with other hams for reccomendations. Quite often someone will have a rig laying around collecting dust.

The best place for shopping for ham gear is at the nearest hamfest flea markets. Just know what you're looking for, and how much you are willing to spend before negotiating for a radio. And quite often you can get a non-working radio and easily fix it, so keep that in mind if it isn't a basket case.

Are there
> any good computer programs for helping to teach morse code?

I'm not acquainted with anything for Windowas as I don't use it, but if you had an Amiga, there is a really cute program that realistically simulates QSO's with a virtual receiver with variable bandwidth, and it is indistinguishable from real on-air operations. I'm sure there are various Linux based programs as well, most of which usually take a text file and regurgitate it in Morse.

When you feel confident to take the test, go to www.qrz.com and take their practice tests, and keep track of what questions you miss so you can bone up on those areas.

Back when I got my ticket, the local club always sponsored a Morse code class, and that by far is the best way to learn. When you have to go to class, you're less likely to give up in front of everyone else.

Most hams now go for the no-code Tech licence first, but I'd still work on the code. NOw that 5 wpm is all that is needed, you can easily learn that in a couple months with practice sessions 2-4 times a week for a couple hours or so. Anything longer just gets monotonous and kills the desire to learn.

> Thanks!
> Alex

Let us know when you get your licence -- that is only the first step in the learning process. There are plenty of hams out there willing to give you a hand with some of the details that seem mind-boggling.

We are entering the nadir of the sunspot cycle so 10 meters is only open for short periods of time on any given day and some days it doesn't open at all.

You might try to get someone locally (say within 5 miles) to help you check it out. i.e. Work line of sight like VHF simplex.

Thanks guys for all the advice.
I'm just glad be getting back in the hobby. I've been inactive since
1993 but now my kids are getting interested. I've got them learning CW
and studying for the Tech exam.

Should be fun :)

Hi,

1st, I know next to nothing about radio communications... That is why I'm here...

I need a radio that will enable me to communicate with my family while in thick woods and mountainous terrain. It could be 10 miles or more in distance. There would be two folks in the woods with a handheld devices (fit easily into a backpack) each and one mobile device that would be installed in a vehicle. We would like it mainly for safety but we may also use it for logistical communication.

If anyone could help, I would appreciate it very much. Also, any pointers to information that could help me "get educated" about this would great. Information about licensing (if necessary) would also be appreciated. I've

been to a number of websites but I'm having difficulty trying to make heads
or tails of it all...

Thanks in advance!

NorCalSki

Hmm, business band radios I think they might be called GMRS radios?? Yet
they might not work very well in your environment. Ham radio should though.

GMRS radios are on the UHF band, and are essentially line of sight.
Intervening terrain will limit your range.

They advertise 5-7 miles for the 2 W units, I would suggest not to
plan on more that 2 miles from them.

GMRS requires an FCC license, no test, where a $75 fee covers you and
your immediate family.

FRS is limited to 1/2 W, and I would suggest expecting no more than 1
mile from them.

There are conditions where these will work over greater distances, but
I am referring to when you can rely on.

Best bet might be 2M ham radios, especially if there is a repeater in
the area.

CB could have greater range and no license requirement, but some areas
have so much garbage and interference that CB may be useless (note the
no license requirement).

Happy trails,
Gary (net.yogi.bear)

Greetings,

I am respectfully submitting this information to all Radio and Electronic enthusiasts, collectors, clock makers, tinkerers and dealers in this newsgroup. This may be of interest to anyone looking to obtain Old, B-7971 Burroughs Nixie Tubes.

Available while our supplies last are these Giant, Alphanumeric Burroughs B-7971 Nixie Tubes. These historical tubes of yesteryear were developed in 1952 and used throughout the 1970's as displays for everything from Early Computers, Aerospace, Submarines, and the display of stock prices on the NEW YORK STOCK EXCHANGE.

We pulled them from an old warehouse, Perfectly Preserved and wrapped in paper to protect them from the years of age. Many electronic/electrical tinkerers have been using them for new and interesting projects such as Nixie Tube Clocks.

We ship overseas and also have available the Original Sockets to accompany the tubes, which are necessary in many applications and are as equally Rare and tough to find. Our tubes are in working order and although we do not test them individually, 99% of the tubes sold to date have worked perfectly! All of them are still as we found them wrapped and boxed. NO Complaints with our service or quality to date, and we hope this will be a good resource for those interested in this type of old technology.

Any questions, please
Contact the Webmaster at webmaster@usmintquarters.com and we will be happy to answer them. Thank You.

The link for more information and prices on our tubes:
http://www.usmintquarters.com/nixietubes.htm

The link to our main website is:
http://www.usmintquarters.com/

Thank You.

Try listening this Sunday, March 7th during the day between 28,400 and
28,500. You should hear something. There's a contest going on. There
were quite a few signals Saturday afternoon.

Bob

```

Right now the band is more often dead than not; your best bet is to monitor whenever you're in the truck, and keep an eye on the DX Cluster and sites like the DX Summit (oh2aq.kolumbus.com/dxs/). I second all the prior posts regarding getting a better mobile antenna. Two weeks ago I worked three countries mobile in a five day span. You just never know, which is part of the fun of 10 meters. If the band is open there will definitely be activity between 28.400 and 28.500. I scan through that range every day during my commute. Have fun.

Matt N3SOZ

Greg,

About the only way to find out is to put it on the bench and check the
receiver output with a signal generator,
the TX with a scope, a freq counter, and a watt meter.

I fear that what has happened one of those 10-fer fellers
wuz a-tryin' fer them BIG "bird" watts (biggest laugh I
ever heard) and has turned "them" funny" little pots til the
thing is out of alignment. If you have a VTVM, you can
use it as a simple field strength meter by placing the leads
(+) close to the antenna and see if the meter reads a signal. That will tell
you if the thing is transmitting.

Just some ideas. Hope it helps.

I have a nice Icom IC735 that I am selling. I bought a new rig (I have 3 HF
rigs) and I don't really need it. It
is clean, has few scratches and puts out full power. Great
receiver, too. The little door in the front (RF and Audio controls) are is
intact, it has a DTMF mike, and I have the
manual and the original box.

I think the mode switches (the silver ones on the left side)
need cleaning because *sometimes but not often* the rig
will stop transmitting and you have to turn it off and back on again. Then
it goes on for quite awhile without doing it again. It is a minor annoyance,

but someone who wants
a used rig and is willing to fix it would get a nice bargain.
It is after all a used radio. I feel that I need to tell about the bad with
the good. I don't need to sell it bad enough to cheat someone by not telling
ALL. If people are "skeered" of it, that's fine. It still makes a fine spare
rig and I still use it from time to time. I will take $300 for it.
Please, no flames. It will make good hamfest tailgating "fodder" at
Spartanburg. SC next month.

I also have a VERY nice HI Sierra antenna for sale. I bought a friend's rig
(a 706 MKIIG) and the HS 1500 as
well. I don't need the antenna, either--I was just helping
a friend out of a bind). The 706 (not for sale) AND the
antenna look like they just came out of the box, and it has
a neat swing-away mount that was on his S-10 pickup. It
has the control as well. I will sell it for $275 (neg) which is
what I have in it. If you've been favoring the HS 1500 but didn't want to
pay the high price, now is your chance.

Email inquiries best for now.

Check here for echoLinux:

http://cqinet.sourceforge.net/

for some other LINUX ham softwares try here:

http://www.n9nu.net/linux/linux.php

and here:

http://radio.linux.org.au/

As the owner of a Kachina 505DSP HF transceiver, I am curious to learn if anyone out there ever created an alternative GUI for the radio?

I know that they provide the command codes on-line and I wondered if anyone took up the challenge?

16                       458.9375          Calling channel / Car-to-car
(simplex)
```

Notes:

The PL tone for all channels is 94.8

Channel 16 is only programmed into handheld radios. As a result, the range is very limited.

Air service usually operate on the channel for the area they are flying over. They
may change to channel 16 to talk to ground units.

DUI units are citywide, but are dispatched on channel 1.

Amateur Radio Newsline(tm) Report 1387 � March 12, 2004

Amateur Radio Newsline report number 1387 with a release date of Friday, March 12th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC says that automatic stations have to avoid willful interference to other hams. Also, a magazine editor speaks out on restructuring. Hear the details on Amateur Radio Newsline report number 1387 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: AUTOMATIC RESPONSIBILITY FOR ALL HAMS

The FCC says no Amateur Radio stations are exempt from the requirement to avoid unnecessarily interference with ongoing communications. This includes automated operations. Amateur Radio Newsline's Rick Johnson, KA9VZD, is in Antioch Illinois with rest of the story:

--

According to the ARRL Letter, FCC rules enforcer Riley Hollingsworth says that it is important for all stations, including automated ones, to realize that they are responsible for any interference caused when they come on top of existing communications Hollingswoth told the ARRL Letter that an amateur had written to him alleging that what appeared to be automated PACTOR stations that were routinely starting to transmit atop PSK31 QSO's on 40 and 30 meters.

In response, Hollingsworth noted that there are no exemptions for automated stations. Rather that the Amateur Service rules address interference with other communications. The rules say that no amateur operator shall willfully or maliciously interfere with or cause interference to any other radio communication or signal.

The amateur who filed the complaint reportedly also contacted one of the PACTOR stations in an effort to develop a dialogue to solve the problem. Hollingsworth expressed the hope that all involved in the PACTOR versus P-S-K 31 problem can work things out. He also points out that stations responding to automated interrogations are equally responsible for not causing interference to existing communications.

For the Amateur Radio Newsline, I'm Rick Johnson, KA9VZD, near Chicago.

--

Hollingsworth also issued advisory letters to three hams who operate automated stations to remind them of the rules. (FCC, ARRL Letter)

**

ENFORCEMENT: HAM WHO ALLEGEDLY HARASSED POLICE ASKED TO EXPLAIN OR TURN IN HIS LICENSE

The FCC Enforcement Bureau is once again naming names and it has asked one ham to explain why he allegedly transmitted on a public service frequency to harass law enforcement. Henry Feinberg, K2SSQ, has the rest of the story:

--

In a February 18th letter to Russel A. Brown, N1KHV, of Palmer, Massachusetts the FCC says that it is considering action based on a February 3rd Incident Report from the Monson Police Department and a February 15th Investigatory Report and a Statement. The latter reportedly was signed by Brown and documents his deliberate operation on Police frequencies without a license. This, the FCC alleges was an attempt by Brown to interfere with police communications and harass police personnel.

The FCC inquiry makes it clear that the information he submits will be used by the Commission in determining Brown's qualifications to remain a Commission licensee. The FCC also has given Brown the option of voluntarily submitting his license for cancellation in order to avoid a hearing on the issue. Brown was told to indicate his preference in his response which was due within 20 days of the FCC letter of inquiry being issued.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New Jersey.

--

The FCC also warned Brown that providing a willfully false or misleading reply would be the subject of a separate enforcement action and could subject him to additional sanctions. (FCC)

**

ENFORCEMENT: CHANGING CALL SIGNS BRINGS FCC INQUIRY

The FCC wants to know why a Tennessee radio amateur keeps changing his call sign. And, in a February 18th letter it is asking Donald H. Binkley the regulatory agency is asking the Nashville ham to explain why he has been jumping between two calls for the past six years.

According to its letter of inquiry, Binkley currently holds the call K4WX. The FCC says that license grant was originally made on September 23, 1998. On June 19, 2000 the FCC says that Binkley filed an application to change his call sign from K4WX to N4ZZ. That application was granted on July 7, 2000. Then, on May 15, 2002 Binkley applied to change your his sign from N4ZZ back to K4WX. That application was granted on June 4, 2002. Now, Binkley has applied for the N4ZZ call once again and this time his request appears to have raised a proverbial red flag with the FCC. As a result, the Wireless Telecommunications Bureau has forwarded the latest application to the enforcement folks for follow-up and review.

In his letter to Binkley, FCC rules enforcer Riley Hollingsworth says that these ongoing applications raise questions about apparent abuse of the licensing system.   He notes that the Communications Act gives the Commission the authority to request information from licensees and applicants regarding their applications and operation of their radio stations.   And that's just what he is doing with Binkley,

He has told K4WX to respond stating his intentions regarding the filing of these applications. He also told Binkley to let his office know which of the two call signs he wants to keep. Binkley was given the usual 20 days from the date of the FCC's letter to respond. (FCC)

**

RESTRUCTURING: AN EDITOR SPEAKS OUT

The editor of a popular ham radio magazine says that his readers have strong opinions on restructuring, and he wants them shared. In an interview with Amateur Radio Newsline's Mark Abramowicz, NT3V, CQ's Rich Moseson, W2VU, talked on a general level about the various restructuring proposals and about his upcoming C-Q reader survey:

--

CQ's Rich Moseson says there's been an active dialogue going among readers of the magazine since the latest round of amateur radio licensing restructuring proposals landed at the FCC's door:

--

"We have a whole raft of petitions that have been filed with the FCC over the past several months all proposing various things from radical changes to little tweaks from eliminating the code requirements completely to adding new ones," Moseson says. "It's a great opportunity for discussion and for a forum on what the ham community thinks our hobby should look like going into the future."

--

Moseson says despite the diversity of those proposals, he says there seemed to be some consensus emerging among those who submitted comments to the FCC and other forums:

--

"It looked like the majority of those people would agree on a restructuring where the code requirement was kept in place at 5 wpm for Extra," he says.

--

And now that the American Radio Relay League has weighed in with its own proposal - a no-code entry license called the Novice - complete with HF privileges, Moseson says CQ wants to know what readers think.

--

"W5YI's 'Washington Readout' colum is all about the League's proposal in detail and our reader survey for April is also about the League's proposal," Moseson explains. "It's going to be asking our readers what they think of each of the major points of the proposal, whether they agree or disagree or have no opinion. And we'll, of course, be reporting the results of that survey in probably the June issue."

--

Even if you're not a CQ subscriber, you can find a copy at a newstand or bookstore.

Moseson says amateur radio must and has kept in step with the times:

--

"I'm not sure what we're going to come out of this with or what direction it's going to go to, " Moseson says. "But one of the points that I've always made is that if we are going to keep ham radio as a healthy, vital hobby and service then it has to adapt to changing times and the licensing structure has been doing that over the course of many, many years."

--

As to how soon, we might expect action from Washington. Moseson says it's difficult to predict:

--

"My guess would be the earliest that you'd see any kind of a decision from the FCC would be the end of this year, probably more likely about a year from now in the spring of 2005," Moseson says.
--

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Moseson also offered his opinion that even if Morse testing was not included as a requirement for any of the license classes that it wouldn't go away. He says CW contest entries have grown in recent years. Thats good news for those advocating long term preservation of the historic mode. (ARNewsline(tm))

CONVENTIONS: THE NAB HAM RADIO RECEPTION IN LAS VEGAS NV.

Its only a few weeks until the National Association of Broadcasters holds its 2004 gathering. One of the major social events that occurs at the NAB convention each year is the `Amateur Radio Reception'. This year will be no exception but for the first time ever this years `Ham Radio Reception' will be hosted by Heil Sound, Limited and its well known owners Bob, K9EID, and Sarah Heil. They would like to invite any and all amateur radio operators who will be in attendance at the NAB show to join them for this annual fun event.

Audio Only: Hear it at http://www.arnewsline.org
--

Bob and Sarah are promising a fun time. They are also planning appearances by some of their special friends as well as dozens of attendance prizes that will be given during the two hour reception. This includes several of the new Heil Poline performance microphones autographed by legendary Eagles guitarist Joe Walsh, WB6ACU.

This years NAB Ham Radio Reception takes place Wednesday April 21st, from 6 to 9 P.M. local time. The venue is the Las Vegas Hilton Hotel, Ballrom B. Of coarse, thats in Las Vegas, Nevada. Bob says all that is required to join in the festivities is to bring a smile and your NAB attendance badge for complimentary food and drink.

For more information please feel to contact Bob or Sarah at 618-257-3000 or by e-mail to bob@heilsound.com. The Heil's say that they hope to see you there. (ARNewsline(tm))

**

CONVENTIONS AND HAMFEST TRAVEL TIPS: TRY FLYING OR TAKE THE BUS

Talking of ham radio social events, its no secret that gasoline prices here in the United States at historically high levels, and the Department of Energy saying to expect prices to go a lot higher. As a result, many hams are asking the rhetorical question: Can I afford to go to a major hamfest or convention this year? Especially one of the big ones like Dayton or NAB. The answer for the most part is yes, but a lot depends on where you live and how far you have to travel to that show. Amateur Radio Newsline's Bruce Tennant, K6PZW, explores some alternatives to driving your own car:

--

If your QTH is several hundred miles away from your favorite hamfest and you drive a gas guzzling vehicle like an S-U-V then you may think twice about going this year. That is, unless you can find an alternative to $3 or more for each gallon of gasoline. Well, there are currently two very good transportation buys available if you are willing to give up the luxury of a personal vehicle.

Lets take a centrally located city like Dallas, Texas. There's a big convention every year in the suburb of Arlington that draws exhibitors and attendees from all across the country. If you live in Houston and plan to attend, its about a 275 mile drive each way. In an S-U-V that gets 10 to 12 miles to a gallon at the projected $3 a gallon the drive one way will cost about $81 each way or $162 round trip. Compare that to the $89 round trip currently being offered between the two cities on Delta and Continental airlines. Want cheaper? Go greyhound, buy your ticket 7 days in advance and it will only cost you $58 round trip.

And what about Hamvention in Dayton Ohio? That's coming up in May. Well, its the same thing here. Using Chicago as your home, the trip is also about 275 miles each way. To drive will cost about the same but make your reservations now and fly out of Chicago's Midway airport and ATA will take you full circle for about $120. Go Greyhound and you can go full circle for only $82

Live further way. Say Los Angeles or San Francisco? Well, you can really get a bargain. Fly United Airlines out of Santa Ana California early in the morning with a connection in Chicago and you can go round trip for $255. By way of comparison, that same ticket a year ago went for about $100 more. And for you Northern California folks, you can do the trip for $283 out of San Jose on American Trans Air.

And the usual disclaimer here,. The prices we quoted we those showing on Sunday March 8th on several travel websites including greyhound.com and orbitz.com. Since the airlines are notorious for changing prices at a moments notice, these could be gone by the time this newscast goes to air.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Two final tips that most frequent flyers already know. First, book early. The best prices for flights are usually sold on-line months in advance. Also, keep an eye on all of the Internet based travel discounters and check their prices daily. You never know when a flight or a bus ride to your favorite hamfest may be a lot less expensive than what it costs to drive your vehicle. And you won't have to hunt for a place to park, either. (ARNewsline(tm))

**

INTERNET SCAMS: ARRL AND RAC E-MAIL BEING SPOOFED

The ARRL and Radio Amateurs of Canada are warning their members and others about bogus or spoofed messages carrying ARRL.net or rac.ca suffixes. Both organizations say that they have been notifoed by people who have received e-mail messages alleging to be from the ARRL E-Mail Forwarding Service or directly from Radio Amateurs of Canada.

The senders of the e-mail encourage you to open the file or an attachment to the e-mail. Don't do it. These messages are false and are the result of one of the variants on a number of viruses now permeating the Internet. The attached file contains variations of worm viruses, MyDoom, Bagle and Netsky. Opening the file could result in your computer being infected. The bottom line: Delete the message and forget you ever got it. Your computer will be a lot safer that way. (ARRL, RAC)

**

HAM RADIO ADVENTURE: COMMUNICATORS NEEDED FOR CAVEING EXPEDITION

Gulf Coast United States, along with Caribbean, or South America base station operators are needed for communication on the ham bands with a scientific expedition. This, in July through August time frame.

The 60 day expedition will explore deep caves in the high Andes mountains and jungle in the western Amazon area of South America. Expedition access to the remote areas is via trekking on foot and pack animal. The expedition will use a solar and battery powered 20 Watt backpack transceiver. Antennas will be a wire dipole or vertical. A miniature notebook computer will be along for digital operations.

Communications will consist of position reports, some short messages with families of expedition members, and any possible emergency or medical messages. All operation will be non-commercial.

Operators with good base stations, efficient antennas and low noise locations are needed on the 40 through 15 meter amateur bands. The operations will use SSB, CW and a variety of digital modes. If you are interested, e-mail Bonnie Crystal, KQ6XA, at radioadventure@aol.com. (KC5FM, KQ6XA)

**

PUBLIC SERVICE: BAKER TO VEGAS FOOTRACE NEEDS YOUR HELP

Also in need of ham radio communicators is the famed Baker to Vegas Challenge Cup Relay race. Baker is Baker California and of coarse Vegas refers to Las Vegas, Nevada.

This year's foot race for teams from Law Enforcement Agencies takes place on April 24 th and 25, starting near Baker, traveling along State Route 127. The race then continues through radio show host Art Bell, W6OBB's hometown of Pahrump, Nevada and finishes up in Las Vegas.

For years, Amateur Radio has played an important role in the annual event. If you or your group is interested in helping with communications, please visit www.bakertovegas.com on the world-wide-web, to sign up. (Via e-mail)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO LAW: CONGRESS ON ITS WAY TO INCVREASING INDECENCY PENALTIES AGAINST BROADCASTERS

Federal legislators are inching closer to increasing the penalties against broadcasters who permit indecent or obscene material to hit the public airwaves. This, as the House and Senate Commerce committees pass bills that would sharply boost fines of television and radio broadcasters who violate indecency regulations.

The U.S. House of Representatives measure increases fines to as much as $500,000 per violation from the current $27,500 per violation level. That version also contains a so-called three strikes provision that would require the FCC to hold a hearing to determine whether a broadcast license should be revoked after three violations take place. It also permits the FCC to weigh heftier penalties against the person who actually utters indecent material on the air as well as the ability to go after the network that broadcast the material in addition to the individual stations.   Right now, the FCC can only fine the licensed station that aired the material and has limited ability to penalize the person who said it.

Current FCC rules limit indecent material presented in a patently offensive manner to late night hours, when children are less likely to be a part of the listening or viewing audience. In some past instances the broadcast standard has been applied to obsenity and indecency issues in private radio including the Amateur service. Newsline attempted to find out if new and higher penalties directed by Congress might be applied to ham radio. We were told that at this point, the FCC's and Congressional actions are directed at the "broadcasters" and not at Amateur Radio. (Published news reports)

**

HAM RADIO BUSINESS: QRZ.COM HAS T1 TROUBLE

If you tried to access the QRZ.com website late on Thursday March 4th you probably found it down. The sites owner, Fred Lloyd, AA7BQ, reports that around 1800 UTC both of the dual T1 lines that supply the sites 3 Megabit feed to the Internet went down.

According to Lloyd, the sites network is supplier is Cable & Wireless and his location is served by two leased high-speed lines by the local phone company, Qwest. The Qwest lines connect the Arizona based QRZ.com servers to the Cable & Wireless location in downtown Phoenix.

About 2 hours after the outage was reported on Thursday, one of the lines was repaired and brought back up. For reasons unknown to Lloyd, the second T1 line has not been brought back up. Now, however, instead of a Qwest problem, it appears that the second line was intentionally disconnected by Cable & Wireless. Lloyd says that Cable & Wireless is currently pulling out of some of the less profitable market areas. Apparently, QRZ was mistakenly disconnected from the grid even though Lloyd had previously been assured that Cable & Wireless is not pulling out of his market. This put Q-R-Zeds back at 1.5 Megabits. That's the same speed that they were for years before the upgrade last December. (QRZ.com)

**

WORLDBEAT: MOTOROLA DONATES RADIOS TO VK EMERGENCY CORPS

Communication is set to improve for one of Australia's most remote indigenous Army Cadet Units following the donation of 24 state-of-the-art two way radio's by Motorola Australia. The company presented the radios destined for the Bamaga Cadet Unit in Far North Queensland to the Australian Parliamentary Secretary for the Minister of Defence , Fran Bailey , at a recent ceremony in Melbourne. Bailey said that she was delighted with the generous support shown by Motorola and acknowledged the contribution the company has made to the nations Indigenous Participation Project. The Bamaga Cadet Unit comprises Two Adult Officers and about 15 cadets. Bamaga is located the tip of Northern Queensland and is one of the most remote parts of Australia. (Q-News)

**

WORLDBEAT: TOWARD RESOLVING THE MEXICO - US 560, 780 & 920 KHZ BORDER SITUATIONS

An update on the radio border war developing between Mexico and the United States as we reported a few weeks ago. According to Joseph Berring in a letter to the CGC Communicator, the alleged problems caused by the Mexican broadcasters on 560, 780 and 920 kHz has become a top priority for both the U.S. FCC and the State Dept. as well as for the Mexican Administration.

According to Berring, top U.S. officials recently met with their Mexican counterparts in Mexico City. Berring observes that despite the controversy and problems that have arisen, Mexico's position has been very clear and unwavering. That being existing bilateral agreements are valid and they have not been violated. Additionally, Mexico seems to have some complaints of its own regarding U.S. stations.

The United States position is obviously a bit different. Not only does the US administration feel that there are clear violations, but that there are specific sidebar agreements dating as far back as 1996 that address the issues at hand.

Berring, who is a consultant on United States and Mexico border issues says to stay tuned. It should prove interesting. (CGC)

**

WORLDBEAT: AN ECUADOR DIPLOMA FOR YOU

A new Republic of Ecuador "Equatorial Line Diploma" for contacting stations at a latitude of zero degrees is being issued by the DX-TA-SEA DX CLUB, This multicolored certificate is awarded to Amateur Radio Operators and Short Wave Listeners for confirming contacts with the 20 different Ecuadorean HC and HD prefix areas. This award was developed to recognize past Amateur Radio activities from Ecuador. More information is available from Dr. Rick Dorsch, NE8Z, P.O. BOX 616, Hamburg Michigan. The zipcode is 48139. (NE8Z)

**

WORLDBEAT: SOTA EXPANDS TO GERMANY

According to the RSGB, the 'Summits on the Air' - or 'SOTA' - awards program has announced that the Alpine region of Germany is the latest geographic area embrace this awards project.

The Alpine SOTA program began operation on March 1st and is already being heralded as a success. The parent 'Summits on the Air' program began in 2002 . Since then there have been over 2000 hilltop activations and 15,000 contacts made. (GB2RS)

**

DX

In D-X, word that GM4YXI, is active portable 9M2 from Kuala Lumpur through the 29th of March. He also plans to operate from one or two Islands On The Air island groups. Look for him on 20, 17 and 15 metres and maybe 12 and 10 metres CW and SSB. (GB2RS)

And PA3GIO will be active slash HI9 from the Dominican Republic through March 18th. Look for his signal on 80 through 10 meter SSB. (GB2RS)

**

THAT FINAL ITEM: TRANSMITTING DATA FROM MARS - AND CONSERVING ENERGY

And finally this week, were you aware that the pair of Mars Rovers now exploring the red planet actually have two ways to send data back to Earth? They can send it direct or indirect. Bill Pasternak, WA6ITF, has more:

--

As you might expect, direct entails using the rovers own high-powered microwave systems and using up a lot of very precious power reserves. Kind of like making a long distance contact on 2 meter FM simplex. You can do it but you need high power and a very directional antenna.

The indirect method uses low-powered UHF links to relay the data to orbiting satellites. These satellites then use their high-powered transmitters to beam the data back to scientists. Thats not much diferent than working a long distance on 2 meters, but doing it with an H-T through your favorite repeater.

To save energy on the solar powered rovers, the UHF relay method is preferred. As of February 18th, the two rovers had sent 10 billion bits of data from Mars to Earth. Of this, only 18% of that data was transmitted directly. The rest was relayed through the Mars Odyssey and Mars Global Surveyor satellites.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

The rest of the story can be found on the web at www.wired.com/news/print/0,1294,62409,00.html (CGC)

Hello group and thanks for any help you can share

We have a basic baby monitor set up in the nursery and the extensions are set up in our bedroom and the livingroom.

Twice now we have clearly heard transmissions of our baby and our own conversations that occured 15 minutes earlier.

This morning my wife and I were standing in our room WITH the baby while we listened to him crying on our monitor and her going in to get him which happpened about 15 minutes ealier. Very odd to me.

How is is this possible? Is this possible?

It was definately not some other picked up transmission from the neighborhood.
It was like time delayed transmission.

Very curious.

This also happened once before

Thanks for any help. Im very curious how this is possible

Panasonic RF-3100 31 BAND Portable Radio. Includes FM-MW-SW 1 - 29. Part of the Command Series this unit works great as both a base radio and a portable. It is in EXCELLENT near Mint condition and comes with it's original box. SUPER CLEAN! Stored in it's box and very well cared for. No scratches, dings. Super Clean!

Follow the link for photos and details.

Thanks

I would suspect a neighbour playing a prank. You must be careful with those monitors, they are very sensitive and people with scanners do listen to everything that gets said and all noises in your home.

Hello all, I have 4 amplifiers. Station 550, it does between 200 250
watts dead key and swings to 550. This amp takes 2 watts to do this. A
ameritron ALS 500 moblie amp with the 10 meter mod. 25 watts swinging
to 70 will give you 200 swing to 500 with 80 amps of draw on the
battery. You can run this amp more effectivly by running two 2200 uf
16 volt electrolitic caps in parallel with that battery and the amp.
I have a palamore three tube amp. 12BT6 driving two 6JS6Cs it needs
tubes so I have no idea what it does. Then there is the VooDoo 300 B
it is a base amp and puts out about 150 watts with 300 watts of swing.
The power to drive this amp is 2 watts. The Station 550 and the voodoo
300 B are broad band amp so they will work anywhere between 80 and 10
meters. I have a Johnson Valaint II that needs a Low voltage
transformer. Its for pick up only. To heavy to ship.
I have a Pro 2052 trunk tracking scanner as well as a 300 watt MFJ

949C antenna tunner and swr watt meter. Sycron 1000 watt meter as well
as to rerceivers. I also Have a Pentium 233 complete dialup internet
ready computer. Includes monitor keyboard video cammera vidio card and
mouse.
I am looking for a good amp that I can drive with my RCI 2990. Some
thing with 4 811s, or 2 or 4 CX 250s, or, 2 or 4 572bs, a single or
pair of 3-500s all mounted vertcal of course

Recently have been made available on ebay surplus stock of RS80
radiosonde.
They have very sensitive and accurate sensor for Pressure, temperature
and Humidity measurement up to 30 Km. I' m just asking some hints or
help to decode the signal transmitted from the sonde to the ground.

Please note that all over the world every day are lunched hundreds of sondes, using the same signal coding technique.

So, if anyone is interested, we could start a cooperative work in order to find the best way to decode RS80 signals, both from meteorological station and by self-lunched balloon (or rocket !!)

Basically, the 403 Mhz radio signal is modulated in the range 7 to 10 KHz, and six "channel" are sent in sequence (2 as low/hight reference, 4 for physical quantity)The first channel is the highest frequency, and mark the start of the "packet", which last about 1.5 sec.

Please send copy also by mail (I'm not used to these NG !!)

There is also data available from the manufacturer, on the web. I downloaded it not so long ago.

Hello, in need of some urgent help. I am having a horibble time soldering the shield of a coax cable to a copper pad in a circuit. I just can't get the solder to flow on the shield. What can i do? I don't know if it matters but the shield has the appeareance of aluminium. I"m hoping this isn't what it is but really dont' know. Please help. Thanks in advance

Aluminum would certainly be hard to wet with tin lead solder. If you
cut the strands, is the inside of each copper colored, or are they
silvery all the way through?

Greetings:

Re the Aluminum coax shield soldering.

If all else fails trim out enough and an inch or so back from the end poke a hole in the braid and fish the inner insulation out and then trim out the inner conductor for it's attachment point to the pcb. and double up the shielding so it can be crimped inside a terminal lug and the terminal lug either screwed to the ground connection or soldered to the ground on the pcb.

RHB

One possibility is that your soldering iron is a little too low in wattage to supply enough heat...this would especially be a problem if the coax shield is heavy because heat dissipates more quickly than the iron can supply it preventing it from getting hot enough to flow the solder. The solution is to get a higher wattage rating iron.

I have also found that sometimes the shield on older or lower quality coax oxidizes and prevent good solder flow. You might try putting some solder flux on the shield before soldering it. That usually solves the problem.

If the shield really is aluminum, you would have to go with a crimp style terminal that could be soldered to the board.

 - Doug

Tonight (March 20, 2004), at 10:05 Pacific Time on "Coast to Coast A.M," late-night radio talk-show host Art Bell is going to take a breather from the customary paranormal and conspiracy-related format and discuss a topic that will interest most -- if not all -- radio amateurs, shortwave radio enthusiasts and broadband users: Broadband Power Lines (BPLs).

Now under development, BPL is a technology that will allow computer users to access high-speed, broadband Internet connections just by plugging the computer into the wall outlet. No need to pay hundreds of dollars in installation, activation/deactivation and service fees for Digital Subscriber Lines (DSL) or cable modems, just literally plug and play.

Fans and supporters of BPL include the Federal Communications Commission, Power Line Communications Association and local utility companies. Since power lines are available in urban and rural areas, while DSL and cable services are limited or inaccessible in some sparsely populated areas, BPL is anticipated to be a major challenge to the existing methods of high-speed access. But BPL is not without its drawbacks.

The American Radio Relay League (ARRL) is concerned about the amount of RF interference generated by BPL. According to their website (http://www.arrl.org/tis/info/HTML/plc), "Studies done by amateurs and regulators worldwide demonstrate conclusively that BPL that uses HF or VHF spectrum will cause serious degradation of the communications capability to nearby receivers on frequencies that BPL uses. HF is a unique international resource that is in use by commercial radio services, broadcasting, amateurs, government and military operators."

Early Saturday morning, about 2 a.m. PST on 3840kHz, Art himself (radio amateur W6OBB) and his roundtable of fellow ham radio operators were discussing the amount of interference -- especially from 2MHz to 80MHz -- BPL can cause if service is implemented nationally. The hams conversing with Art on the 80-meter band said that constant buzzing heard on those frequencies will anger shortwave listeners and hams alike if RF interference is constantly heard on those frequencies.

Another problem is the potential health risks associated. Could a substantial increase in RF exposure -- especially around the household -- contribute to the rise in cancer-related diseases? A very close friend of mine, who happens to be a ham radio operator living near Switzerland, explained to me that most of Europe has scrapped plans for BPL because of possible RF-related diseases, as well as RF interference in commercial and amateur/SWL communications.

Nevertheless, tonight's "C2C" is going to be extremely interesting and worthwhile to those who are interested in all forms of radio communications. My friends and I will definitely be listening.

Occasional AB (Art Bell) Listener

I couldn't find anywhere giving "this is the format of the data",
"this is the modulation scheme".
I assume it outputs psuedoranges, which won't directly get you
position (without significant work and currentish orbits) but can
fairly easily be used with another GPS to get differential position.

The code is pretty simple. What you need is the machine that computes the raw code into the numeric code. The numeric code can then be ploted on a Skew-T log diagram. Somewhere I have a copy of the USAF AWS FM80 observing manual. If I can find it I'll post the code sequences and how to break them down. Geez, I plotted hundreds of these things, maybe even a couple thousand but now the code is just so much fuzz in my head.

Anbody remember this posting?

=================
Subject: AMATEUR EQUIPMENT DONATION NEEDED

Newsgroups: rec.radio.swap
Date: 2004-01-23 06:22:39 PST

Long Island Mobile Amateur Radio Club (LIMARC), is looking for DONATIONS
of "Ham" gear, like triband beams, rigs, and towers, to be used for our
Emergency Communication Stations, and Field Day.
If you have any old equipment that you're not using anymore, and would
like to donate it to our cause, we will make sure that you get a nice
letter,
being that we have 503 c(3) status with the I.R.S. ,for a tax deduction,
from
our club. We really need your help, so please try to assist us in any way
that you
can.

I've had mine three years now this month. Been a good rig so far.
Haven't had any problems, knock on wood...And mine is on nearly 24
hours a day. I'm listening to AM-BC on it as I type...I've used it on
every ham band 160m thru 70cm. It's the most versatile radio I've ever
had, and it's the smallest...It's amazing they can pack all that "all
band-all mode" radio into such a small box, and still do 100w out on
HF and 6m. Microscope and tweezers electronic technology at it's
best...I've gotten so spoiled on all bands in a rig, I'm thinking
about getting a kenwood TS-2000 for a newer house radio. It's like a
706 on steroids... :/

> OH a little secret
> most of these if you run the mic gain around a 3 they tend to sound
> the best on VHF/UHF, I know that sounds low but thats where i run
> mine and about everybody i know run theirs. Just dont give up you
> will learn to love it.

Yea. On VHF/UHF, I found you have to lower the mike gain a bit if you
don't want to be overly hot. I run mine on the upper end of "2". On
HF, using SSB, I run it on the upper end of "4". Maybe "5" if using
the stock hand mike in the mobile. At home I use a audio technica
dynamic with a small outboard preamp to give me enough drive from the
real low Z element. MK

Hi!
I need for printing QSL-Cards a IARU-Logo like the one
on http://www.iaru.org
But all these in the web are very small, and the quality is
not good.

Maybe you can help me...

It's great for the Tech class but pathetic for the General class.

Hello,

I'm new to ham radio -- was interested in buying a portable. I was wondering whether VHF or UHF would be the way to go?

I would be using the portable in suburban neighborhoods, on the road, and in forested areas the odd time... Is there really any difference?

I am looking at the Motorola 1250...

Any suggestions would be most appreciated!

Thanks!

-Trev

Here is what I'm trying to do...

I have the cable for the VX-150
I want to program a FT-50

They both use the same clone cable so logic would say they should use
the same data cables right?

It's the cable that came with the ADMS-1F kit.

(Coincidently if you use the supplied adapter you can also use this
cable on a Radio Shack Pro-95 Scanner!)

Thanks for any help!

Yes, the same cable will work on both units, plus a few more Yeasu
models.

Different software, though. RT Systems will sell you just the
software, without bundling it with the cable as Yaesu does.

Happy trails,
Gary (net.yogi.bear)

Having been out of the radio loop for several years, I don't know what
advances, if any, have been made in coax technology. I will have about an

80-100 foot run of coax to my dual band vertical. What are your opinions as to the better quality coax available today? RG-8, 213? U? A/U? Other suggestions?

Thank you.

Russ

Russ,

I found the information on the Wireman's website useful. Reliable company too. At http://www.thewireman.com/coax.html you can read a handy guide for choosing coaxial cable.

The reviews at eham.net are very helpful when trying to decide what to get. http://www.eham.net/reviews/

Then sometimes I head for EBay to look for ham bargains. There is always a lot of stuff in the ham radio category.

Anyone know of a way to change the scan-resume time in the FT-8800R?  It's
supposed to be 2 seconds but I'd rather up it to 4 or 5.  TIA.

Tony

Give the Gentlemen at RFDavis a call. I bought 9913 after talking with
them. Great service and follow up after a glitch.   Would definitely recommend
them and buy from them again. They are in New Hampshire.

I am looking for a new or used a protable telescoping antenna mast with tripod for $200 or less. The ones I have see on ebay kinda look like a camera tripod with a 36ft to 80ft telescoping mast where can I get one of these kinda cheap. Would the best place to get one of the be at a arm/military surpuls store. I am in half way between Dallas & Austin so any place near here on online will do fine also in the Houston area would work to.

Hi Gang,
I'm looking into setting up for SSTV. I have an ancient
freebie version of WinSkan which works fine, but has a
number of features disabled.

Can anyone that is currently active in SSTV make a
suggestion of which PC software is best? Thanks!

I just got my Technician and General license. I have an SSB on my boat that operates on the marine SSB channels and can also work ham frequencies. I'd like to put some of that CW training to use too but could use some advice about what I need.

My SSB (Icom IC-710M) has a connector with two pins for CW input. I bought the connector from Icom and just put together the cable. Now I need to connect this to a key. I'm thinking of getting a cheap straight key to play with. I'm also interested in a paddle/keyer since it seems that no one stays with a straight key any longer and it looks like it would be easier to use (I have never had a CW QSO yet!). Since my Icom has only two pins of input, I'm figuring that a paddle (Iambic) would need some type of electronic device to encode the left and right paddles into the series of dots/dashes.

First, am I right about how all of this works?

Second, can anyone give some suggestions about a straight key to use (and where to get it) along with what I should be looking at for the paddle/encoder idea?

Thanks!

You might try SpotCollector -- it monitors up to 4 telnet clusters (of any variety), the DX Summit web cluster (via IRC), and a local packet cluster (via external TNC). DX Spots received from these clusters are combined and entered into a database that you can filter (by band, by mode, by location, and by origin of spotting station) and sort in real time. All entries for the same DX station on the same frequency are merged into a single entry with "first heard" and "last heard" times. SpotCollector also captures WWV spots and displays the last month's SFI/A/K data in an easy-to-understand graphical format.

SpotCollector automatically interoperates with other members of the DXLab Suite. If you are logging with DXKeeper, then SpotCollector will color code DX spots to reflect your degree of need. If you are using DXView to display a world map showing beam headings and the solar terminator, then SpotCollector will plot its DX spots on that map. If you are controlling your Elecraft, Flexradio, Icom, Kenwood, TenTec, or Yaesu transceiver with Commander, then double-clicking on a DX spot -- either in SpotCollector's database window or on DXView's world map -- will QSY your transceiver to the correct frequency and mode, and rotate your antenna to the correct bearing; the latter requires the use of DXView to control your ARSWIN, Heath, Hygain, M2, SARTek, TIC, or Yaesu rotator . If you are using WinWarbler for soundcard digital modes, then double-clicking on a a PSK31, PSK63, or RTTY DX spot will QSY your transceiver to the a frequency that puts the QSO on a prespecified optimal audio offset and will start WinWarbler decoding on that offset in the correct digital mode.

Like all DXLab applications, SpotCollector is totally free, and available via www.qsl.net/dxlab .

A dual band radio is best. If you are getting a single band radio, then I
would reccomend 2 meters as most repeaters are on 2 meters.

This is a full featured SSTV program. It seems to be the "standard" among
those I know.

Tom

```

.

HFpack, The HF Portable Group, is free and open to all radio operators.

HFpack has an egroup on Yahoo:
http://groups.yahoo.com/group/hfpack

You will find many operators on HFpack, discussing all aspects of HF portable operation, battery power, antennas, microphones, amplifiers, headsets, keys, etc.

Regular on-the-air operation schedules are part of HFpack activities. 18157.5kHz and 5371.5kHz are the HFpack calling frequencies. 18157.5 is the most active frequency in the world for low power SSB. Just call "CQ HFpack". All base, mobile, and portable operators are welcome.

HFpack is not listed in the Yahoo egroups Directory, but with about 4300 members, it is one of the largest ham radio egroups. Unlike most other internet forums, HFpack egroup is "fully moderated" by a team of 5 moderators. As a result, there is zero spam, zero flames, and zero off-topic messages. Membership is free and open to all radio operators.

HFpack website has many features for the HF Portable operator, including hourly updated propagation maps based upon real time "ionosphere radar" soundings.
For more information and on-the-air schedules, visit the HFpack website:

http://www.hfpack.com

Have you heard of MMSSTV?  It's free and might work quite well for
your needs.

I recently purchased an Icom 720A on eBay, but the radio is missing the microphone. I understand that the early model of Icom transceivers had a preamp in the microphone itself, and you have to have either the original mic that came with the radio, or a similar microphone with a preamp to drive the audio in the transceiver. Does anyone know of a source or web page that has microphones for older Icom transceivers like the 720A? I'm not sure if Heil offers a mic for the 720A or not, but the issue of the older Icom mics is listed on their site. Can anyone help me out on this one? Just send me an e-mail if you have any suggestions. Thanks!

73,
Mike KU4UV

Hi. I posted this question in the CB newsgroup, but they just swore at me for some reason and didn't offer any help. Could anyone here help me? Thanks.

<<I got a new Galaxy DX 2547 the other day, and am not sure if I have a problem or not.

When I listen to Ch. 38 LSB, the frequency counter displays about 27.3847 when i tune the clarifier to hear the other people's voices well.

However, when I transmit, the frequency counter jumps up to 27.3855.

So I assume I am transmitting at 27.3855, but when I tune to this frequency with the clarifier, everyone sounds way too high in pitch, I can't even understand them.

So......is everyone else hearing me way too high in pitch to understand me?

Thank you for any help.>>

I suspect there is a problem with the frequency counter rather than with the
actual transmit frequency, i.e. the read out is wrong.

So here's two ways to try to tackle the problem.

1) Get with a friend who knows your real voice (i.e. local) and have him
listen on another radio while you transmit.

2) Buy an external frequency counter, hook it to your radio and test it
out.

Is your clarifier unlocked? IIRC, on stock (or legal) CBs your transmit frequency doesn't change when you move your clarifier. So you may be trasmitting at 27.3855, and listening to their trasmission on 27.3847. With only 2 people in the conversation, this isn't an issue. It's a common mod to tie together the tx and rx frequencies (hopefully while carefully aligning them so that they're the same), maybe this hasn't been done to your radio.

And do some easy testing by talking to people. If you get into a conversation and they say you sound good, you can stop worrying. If they ask each other what the high pitched noise is (hopefully after they try and tune for it), then you've got problems.

And enjoy SSB. When I left CB it was one of the few places to find good conversation.

Ben

I believe that both plurals (antennas and antennae) are correct. One is simply the Latin plural, and the other the Anglicized plural.

Nope, antennae only applies to bugs, the devices used to receive radio waves are antennas.

Hi all,

Very new to this group and a self confessed radio deadhead... I am an electrical engineer savvy enough to know what I want to do but sadly no RF skills other than basic understanding. I am making a measurement device to locate plants in a grid for my wifes research project. I have used ultrasonics successfully until the plants grew into the sound path and it stopped working!

I want to use a (roughly) 100MHz signal from a central probe and compare its phase at the TX ant to the recieved phase at a distance up to 1m from the probe, with a resolution something like 1mm. I plan on using a phase detector from logic gates, integrated and A/D converted to a digital signal for processing. I can average many samples to improve the accuracy of the phase detector.

The problem is that as I want to tune the 100MHz signal directly, (ie no mixing, IF filters etc) and I need a very clean RX signal at 100MHz which I can over-amplify to my square wave I need. I can't drop the frequency due to the wavelength (100MHz = 3m, 180deg phase test = 1.5m) and I am having trouble with my FET front end being overloaded by neighbouring (100m away) FM transmitter tower... Does anyone have any bright ideas how I might make the front end very selective? I can drop slightly out of the FM band to say 80MHz to reduce the interferance as well and I am only planning to generate some 50-100mW of RF (don't want to create interferance myself....)

Thanks in advance,

Hamish

Actually I am not trying to design antennas (>500Mhz to 1Ghz- I guess this gives you information about what sort they are), I am trying to buy them on a pcb or small chips that could be mounted on a PCB.

Thanks,
Adam

My guess is that the plural for insect antennae came from Latin and the plural for RF antennas came from a more modern language. The word "antenna" entered the English language around 1646 from Middle Latin according to my dictionary. There were no RF antennas in 1646, at least not on purpose.

My unabridged dictionary says that antennas is the plural of
RF antenna and antennae is the plural of insect antenna.

Your wavelength of interest is 3cm at a minimum...
you're trying to put them into a box smaller than
that.

How much gain should this antenna have?  How
broad-banded does it have to be?  How much
power does it have to handle?  What kind of
polarization do I want?  These are basic
questions you should answer.

This may provide some solution fodder.

Mixing preserves phase relationships, believe it or not.

If you take two receivers and feed the TX signal directly to one (suitably attenuated), then put an antenna on the other to pick up the "distant" signal, then you must feed them both from the same LO (or LO's if multiple conversion). The phase shift in degrees in the two IFs will be the same as at the antennas. At 100MHz you will be able to use coax length to make the zero setting.

With all the building you are willing to do, it seems that a few balanced mixers and MMIC broadband amps and some pretty simple filters, you can do this. With a high enough IF the IF filter shouldn't be too difficult. You can even go higher for the RF. Heck a 450 TX. The LO would be the hardest part (another 450 rig)??

It seems that 1 mm is asking allot.

Any help? I subscribed, but don't read this NG too often, so try email or repost on rec.rad...ama...homebrew

I am trying to build rf transmitter and receiver that could transfer information (doors open closed, light on, etc, etc) from my car in the parking lot to my office desk. The distance is about 100m. I would like to have the receiver to be very small-key chain size. Therefore I thought high frequency might result in a smaller antenna. Most probably bandwidth will be very small (I do not need high speed data

transfer). I am not sure about the polarization issue. About the
power, that depends on the design, most probably. I am planning to use
the IC from; http://www.maxim-ic.com/Wireless.cfm

Is it possible to do this kind of a device that small?

Adam

Easily... as long as all it has to do is receive. You can pump out 20W of UHF RF from your car, you'll hear it without any antenna at all inside, probably. Your concerns are path loss (not that much through the walls of the building) and receiver antenna inefficiency (the greater of the two, since you put a small size limit).

Perhaps you're talking about this chip:

http://www.maxim-ic.com/view_press_release.cfm/release_id/932

Pretty impressive, I must say... looks like fun.

Keeping this On Topic for r.r.a.a, I'd start with
a piece of wire 1/4 wave long, run around the
perimeter of your device, as an antenna.

Adam, before you get all wound up over building a system from scratch, why
not consult some security and alarm companies, and see what they have
available...?

Well for one, USA-market 706's would be able to transmit all the way from 7.0 to 7.3 mHz.

plus it doesn't have the tone needed to open up UK repeaters (at least I don't think it does).

Amateur Radio Newsline™ Report 1382 – February 6, 2004

Amateur Radio Newsline report number 1382 with a release date of Friday, February 6, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A major problem for Amsat Oscar 40, a surprise BPL rollout in Pennsylvania, UPS says that illegal 10 meter radios will be ordered out of company trucks and another view of the ARRL’s restructuring proposal. Find out the details on Amateur Radio Newsline report number 1382 coming your way right now.

HAM RADIO IN SPACE: AO-40 SUFFERS CATASTROPHIC POWER FAILURE

The main battery pack on board the AMSAT Oscar 40 satellite has failed and controllers are unsure if the bird can be brought back to life on the reserve power system. Amateur Radio Newsline’s Norm Seeley, KI7UP, tells us what happened on-orbit:

--

According to AMSAT Executive Vice President Rick Hambly, W2GPS, AO-40 began its tumble to obscurity on Sunday, January 25th. That's when the satellites battery voltage momentarily dropped to 24 point 5 volts. This triggered a fail-safe that shut down the satellites passbands. Then, at the beginning of the eclipse on orbit 1486 the battery voltage rapidly dropped just below the cutoff voltage of 24.0 volts and this shut down the transmitters to protect the battery and other on board equipment.

AMSAT controllers kept a close eye on the bird and on Tuesday the 27th the battery voltage suddenly dropped from to 14V. Mission commanders currently believe that more battery cells short circuited. Control stations immediately began transmitting blind commands to the spacecraft in an attempt to switch over to the auxiliary battery. Eventually, the auxiliary battery pack came on line, but in parallel with the main pack. This means that the shorted main Ni-Cad battery is loading down the back-up Nickel Metal Hydride cells are clamping the voltage low and keeping the auxiliary battery from fully powering the spacecraft.

AMSAT is hopeful that one of the cells in the main battery will eventually fail open circuit. This would effectively remove the damaged battery from service and permit the back up battery to assume the full load of AO-40. In the meantime its a waiting game with fingers crossed that no other catastrophic failures to other parts of the satellite take place.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale Arizona.

--

A set of spare A0-40 back-up batteries were found at the AMSAT lab in Orlando Florida. Using them Stan Wood, WA4NFY and Lou Mc Fadin, W5DID performed a series of tests that showed the auxiliary battery pack on board the satellite should work well if they are otherwise undamaged. Unfortunately, than will only happen if the main battery pack can be pulled off line.

**

HAM RADIO IN SPACE: MIKE FOALE TALKS HOME

Still with ham radio in space, Wednesday, January 28th was a very special day on board the International Space Station for Astronaut Mike Foale. That's because the space traveler got the chance to speak to students at the school he used to attend and he did so using Amateur Radio. Take a listen:

--
Contact Audio no print transcript
--

The contact between Foale on board the I-S-S and the kids at The King's School, Canterbury, England began at 17:42 UTC when the I-S-S answered the call of G-B-4-F-U-N. That station was operated by G-Zero-A-K-I and the audience kept its breath as Foale answered 12 questions.

--
Contact Audio - No print transcript
--

Media coverage of this contact was impressive. Meridian TV, BBC TV, BBC Radio Kent, Invicta Radio and the Kent Gazette interviewed the students and put reports in the main newscasts. The BBC World Service and the Press Association asked for information and contact transcripts. (ARISS, ON4WF)

**

THE BPL FIGHT: PA HAMS ORGANIZE TO FIGHT ALLENTOWN ROLLOUT

Hams in Northampton County in eastern Pennsylvania, just outside of Allentown, are organizing a campaign to protest announced plans by PP&L to offer Broadband Internet Service over power lines in a development in Hanover Township. The Allentown-based utility has been doing field tests of the technology in nearby Emmaus, Pa.

The ARRL's Eastern Pennsylvania Section Manager Eric Olena, WB3FPL says PP&L sent out 2,000 letters to residents in a section of Hanover Township and already has received replies from 200 people interested in subscribing to the service.

Olena says an ARRL District Emergency Coordinator and other hams met with township officials to warn them about the massive inteference Broadband over Power Lines brings to the radio spectrum, including fire and emergency frequencies. But, he says, the officials apparently were swayed by the utility's assurances no such interference exists.

An interview with Olena and others involved in the battle, coming in next week's Newsline. (ARNewsline(tm), NT3V)

**

ENFORCEMENT: EVEN MORE COOPERATION COMBATTING 10 METER PIRATES FROM UPS

A follow-up to our recent story concerning the use of unlicensed 10 meter radio gear on-board United Parcel Service Trucks. As reported, back on January 7th the FCC notified the U-P-S offices in Elkhart Indinana and Middleburg Heights Ohio of its findings. The company offered its full cooperation to end the problem.

Now comes word from the FCC that they have been contacted by UPS national corporate headquarters has contacted the regulatory agency and the company did not mince any words. It told the FCC that the agency has its full cooperation in removing any unlicensed radio gear and any non-certified two-way gear from their delivery fleet, nation wide.

According to UPS, the only personally owned radio gear permitted in their trucks under a collective bargaining agreement with their union drivers are commercially built unmodified C-B sets, and that only on a regional as-needed basis. No other radios are allowed. (FCC, UPS, others)

**

ENFORCEMENT: THE FCC ACTIVE IN A NUMBER OF CASES

Meantime, the FCC has been active in a number of other enforcement issues involving ham radio operators. The agency’s Daryl Duckworth, NN0W, has more:

--

Duckworth: “An Extra class license was downgraded to Technician class due to a failure to appear for a retest in Solidad California. Also, cancellation of an Extra class license in Medera California for the same reason.

A notice for retesting was sent to a General class licensee in Hialeah Florida. The deadline for that one is March 1st.

A letter requesting additional information pursuant to Section 308(b) of the Communications Act -- in order to make a decision on a General class renewal went out to Newton Square PA..

A letter settling enforcement action with a General class licensee in Bart VT. has resulted in voice operation prohibited for three years on 20 meters.

Daryl Duckworth, NN0W, reporting.

--

Even though its still not naming names of alleged violators the FCC is making sure that those thinking about breaking its rules know its still around. (FCC, RAIN)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WA3PBD repeater serving Pittsburgh, Pennsylvania.

(5 sec pause here)

**

RESTRUCTURING: ANOTHER LOOK AT THE ARRL PROPOSAL

Even though there are more than a dozen restructuring proposals before the FCC, its the American Radio Relay Leagues recent filing that really has the world of Amateur Radio talking. The obvious question is why, and thats what we asked correspondant Mark Abramovich, NT3V, to find out:

--

As more amateurs find out what the ARRL has to say, they're starting to pay attention.

When the ARRL speaks, the FCC generally listens. In the past, the FCC has used the organization's proposals as a foundation for decisions.

To understand where the ARRL is coming from, you might want to get some perspective from the past. Who better to offer it than Harry Dannals W2HD - elected ARRL president in 1972 and re-elected to five consecutive terms. Now retired and living in Charlottesville, Va., Dannals is on top of the debate.

"It's a long cry from the days of incentive licensing when we did have people who resigned their membership, withdrew their membership, or did not renew their membership, just to show their disappointment and utter dissatisfaction with the incentive licensing proposal as it was named," Dannals recalls. "Because that was indeed (what it was), in the minds of the ARRL board headed at that time by President Herb Hoover.

He believed that in order for us to show that we were improving ourselves and becoming better at what we do that we should upgrade our license structure."

Dannals says the claim the ARRL proposal for a "no code" HF license "dumbs down" the hobby is off the mark.

"I think the new proposal, despite the criticism by those who say: 'I had to do it and therfore, you have to do it,' I think the new proposal will bring more people into amateur radio than the 'no code' proposal ever did," Dannals says.

Dannals says the Novice concept will go a long way in revitalizing interest.

"The introductory grade of license will give them some of the things that will make amateur radio mean more, the long-distance communication, the long friendships that develop over the many thousands of miles," Dannals says. "And I do believe we need this."

Dannals laughs at the fears that we'll need hundreds of FCC types to police the new hams.

"I think if the amateurs themselves who have experience, the older timers - and they don't have to be white-haired and grizzly old-timers - they can be relatively newcomers, maybe 5-10 years," Dannals says. "They can take care of tutoring the newcomers more than adequately."

Dannals says local radio clubs are the key to success for any license restructuring.

"Put out a handshake and say: 'Come on board. We'll help you, we'll teach the courses that you can use to get your license and we'll help you once you've got your license.' The old Elmering still is working."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Keep an ear open for more on this from both Harry Dannals and Mark Abramovich as all of the restructuring petitions wind their way through the FCC rules making process over the next several months. ARNewsline(tm))

**

ON RAIN: JIM HASYNIE W5JBP

Meantime an in-depth conversation about this issue with ARRL President Jim Haynie, W5JBP, is available from RAIN -- the Radio Amateur Information Network. Its in cyberspace at www.rainreport.com or on the phone at area code 847-827-7246. (RAIN)

**

REGULATORY: CROSS BORDER RADIO DISPUTE BETWEEN US AND MEXICO BROADCASTERS

A cross border radio war may be brewing between the United States and Mexico. This as complaints of massive interference to United States broadcast operations from a new station on 560 kHz in Tecate Tijuana Mexico lead to a high level telephone call between the FCC and the Mexico’s SCT on Thursday, January 29th. A call that many hoped will defuse the situation before it escalates any further.

According to the CGC Communicator, the SCT which is Mexico's telecommunications regulator is said to have promised swift action in eliminating the interference that XEKTT is currently causing to U.S. stations. But the story does not end here. Concern for Mexico's planned operations as XESS on 780 kHz and XEDD 920 kHz, also in the vicinity of Tijuana continues to mount. A printed copy the authorization for 780 kHz has surfaced. It confirms that operation with 20 kilowatts dayside and 10 kilowatts night with non-directional facilities both times and a quarter-wave tall broadcast tower is in fact sanctioned by the SCT.

The CGC Communicator says that this confirms the power figures it published a few weeks ago and establishes what it terms as more blow torch situations. Meanwhile, additional broadcasters are joining the list of companies concerned with the current 560 kHz interference. (CGC)

**

ENFORCEMENT: THE FCC VS. THE SUPERBOWL HALFTIME SHOW

FCC Chairman Michael Powell has ordered an investigation of the telecast of last weeks Superbowl half-time show in which rock performer Justin Timberlake ripped part Janet Jackson costume on-camera. The stunt brought a massive number of complaints to the regulatory agency from viewers of the game.

In a press release obtained by the Amateur Radio Newsline, Powell states: “I am outraged at what I saw during the halftime show of the Super Bowl. Like millions of Americans, my family and I gathered around the television for a celebration. Instead, that celebration was tainted by a classless, crass and deplorable stunt. Our nation’s children, parents and citizens deserve better."

CBS which aired the game denied that the incident was preplanned. None-the-less, Powell instructed the Commission to open an investigation into the broadcast. He also stated that the inquiry will be thorough and swift.

At least in theory, each station that permitted the video to be aired could be fined or have its license designated for as hearing if the investigation finds that the material was either indecent or obscene. (FCC release)

**

RESCUE RADIO: AGENCY WARNS OF BIG FIRE SEASON IN THE SOUTHWEST

Hams involved in emergency communications in the Western United States should get ready for a rather busy fire season. At least that's what a recently released preliminary outlook for 2004 seems to imply. Bill Pasternak, WA6ITF, has the retails:

--

According to Jay Miller, W-A-5-W-H-N and Raleigh Stout A-C-5-J-W, the Southwest Area Coordination Center in Albuquerque, issued the report. The center is a multiagency hub for the region's wildfire operations and it says that persistent drought and millions of dead or dying trees have set the stage for a fire season as bad or worse than 2002. That's when millions of acres burned across the region.

In southeastern Arizona and southern New Mexico, field surveys reveal that the snow pack holds less than 20% of the average moisture of a normal mid-winter. Coupled with the 2003 monsoon season being one of the driest in a century, the center says that tinderbox conditions are manifest.

And its going to get worse. With little relief in sight, the fire season, which usually begins in April, could start a month or more earlier. Public land managers are being urged to complete training and preparations sooner than usual and to put more firefighters on duty. It also means that hams involved in support of firefighting efforts will need to hone their skills a lot earlier this year in order to be prepared.

For the Amateur Radio Nerwsline, I'm Bill Passternak, WA6ITF

--

Its beginning to look as if firefighters and the ham radio operators who support them may have a tough fire season ahead. (ARNewslin(tm), WA5WHN)

**

RESCUE RADIO: TEXAS CELLPHONE HERO

A 40-year-old flight attendant in El Paso, Texas is being hailed as a hero.

This, for her fast and efficient handling of 15 to 20 9-1-1 calls which were sent to her home phone due to a routing error at S-B-C Communications.

News reports say that Maria Chaidez Karam processed the calls for help - including several emergencies - during the 41-minute glitch. In fact, she relayed details via her own cellular telephone to the police dispatch center's seven-digit non-emergency number.

Complete details about this story are on the web at http://www.borderlandnews.com/stories/borderland/20040119-70359.shtml (CGC)

**

RADIO LAW: ABRAMS VS. RPV - ANOTHER WIN

An update on the case of radio site owner Mark Abrams WA6DPB versus the city of Rancho Palos Verdes California. Abrams has been embroiled in litigation against the city for several years and has won every round, This is no different. The 9th Circuit Court of Appeals ruled on Thursday, January 15th, that Abrams is entitled to damages, attorneys fees and court costs from the city, but there is a catch. Abrams says that the decision only entitles him to a trial to determine the amount of money involved. It does not set an award amount. (WA6DPB)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE WAR ON TERROR: SECURITY ALERT FOR CELL PHONE GUNS

Don't be surprised if you're asked to make a call on your cellphone the next time you go through airport security. Time Magazine quotes sources as saying handguns disguised as regular cellular telephones have been seized in several drug raids across Europe.

The potentially deadly devices look exactly like a normal cellular handset but are capable of rapidly firing four .22-caliber rounds of ammunition. They are manufactured in Croatia and are fired by punching buttons on the keypad

So far, none of the phony cellphones are known to have surfaced in the United States. Aviation security experts say screening equipment now in use can detect these cellphone guns as well as all other improvised explosive devices..

The rest is on-line at
http://www.time.com/time/magazine/article/0,9171,1101040202-581402,00.html

POSTAL PROBLEMS: CQ INVESTIGATES DAMAGED MAGAZINES

If you are wondering why your ham radio and other magazines have been showing up with torn covers or their insides missing, you are not alone. So were the folks at CQ who were receiving complaints from their readers. So they launched their own probe and what they found that its likely a problem at the United States Postal Service.

According to CQ Publisher Dick Ross, K2MGA, the postal system has installed new equipment that's designed to speed up the processing of mail through automated sorting. Ross says that it usually works quite well but unofficial information coming to him says that the units can cause problems if they are even slightly out of adjustment. As Ross says, it sounds as if the new technology demands maintenance far beyond having a service crew fix it when it breaks.

Ross says that his magazines have already taken steps to get around the problem until the postal service finds a permanent fix. This includes new imported paper for the magazine covers.

What Dick Ross found out about the foibles of the postal services automated sorting system makes good reading. You can find it on page 4 of the February issue of CQ Magazine. (CQ)

NAMES IN THE NEWS: FCC ENGINEER MICHAEL J. MARCUS HONORED BY IEEE

A word of congratulations to Dr. Michael J. Marcus, N3JMM, of the FCC's Office of Engineering and Technology. This, after recently being conferred as a Fellow by the Institute of Electrical and Electronic Engineers based on his extraordinary record of accomplishment.

The IEEE chosen to honor Marcus' contributions in the field of radio technologies with specific recognition to his creative technological vision that significantly advanced policies. This helped to lead to the deployment of spread spectrum and Wi- Fi technologies.

Dr. Marcus joined Office of Engineering and Technology in 1979 and currently serves as its Associate Chief for Technology. He received his bachelor's and doctorate degrees in electrical engineering from Massachusetts Institute of Technology. Before joining the FCC, Dr. Marcus worked for Bell Laboratories, the U. S. Air Force, and the Institute for Defense Analyses. (FCC release)

**

HAMFESTS: AM EXPO 2004 IN NEW JERSEY IN APRIL

Turning to the ham radio social calander, AmExpo, an event within an event will take place on Friday April 30 through Sunday May 2nd 2004 at the Millville Airport located in Millville, New Jersey. In addition to the hamfest, the 2004 “Wheels & Wings” air show is occurring at the Millville Airport at the same. This event features many extraordinary aerobatic exhibitions including the Air Force Thunderbirds. (

Meantime, Hugh McElroy, W2AVN says that AmExpo itself is a celebration of the evolution of communications. Included will be demonstrations of ham radio satellites, Echolink, along with HF, VHF and UHF radio communication in every mode. More information is on-line at www.p49millville.org. (W2AVN)

**

SEMINARS: COMM ACADEMY IN WASHINGTON IN MARCH

The sixth annual Communications Academy set for March 20th and 21st at the Shoreline Conference Center, in Shoreline, Washington just north of Seattle. This years theme is Interoperability and the Expanding Role of Amateur Radio Communications. The keynote speaker is retired Police Chief Gerald W. Boyd, KW7J. Boyd is the author of five books including three on amateur radio emergency communications. You can find out more in cyberspace at www.commacademy.org (Press release)

**

CONFERENCES: EASTERN VHF CONFERENCE IN CT. IN APRIL

And the 30th Annual Eastern VHF/UHF Conference will be held on April 16th to the 18th at the Radisson Hotel in Enfield, Connecticut. Guest speakers to date include Dan Henderson, N1ND, on the status of ARRL VHF/UHF Contesting & Awards, Del Schier, K1UHF, with a talk called What’s New at West Mountain Radio and many others. And, as a special thank-you to all those who have supported the conference the planners are providing a free dinner to all who register for the event. More, including registration forms can be found on-line at www.newsvhf.com (VHF REflector)

**

INTERNATIONAL - UK: WORKED ALL BRITAIN AGM ON FEB 15

In international news, the Worked All Britain Awards Group Annual General Meeting will take place on the 15th of February. The venue is the Radiosport Communications and Computer Show at Stevenage in the United Kingdom. Nominations for the committee to consider should be sent to G0NLX at her call book address no later than February 13th. (RSGB)

**

CONTEST OPERATIONS: K7BV TO TURKS AND CAICOS FOR ARRL DX CW

From the contest calendar word that Dennis Motschenbacher K7BV will be in the

Turks and Caicos Islands from Feb 19th to the 26th. This, to operate in the ARRL DX CW contest using the probable call sign of VP5M. He will use VP5 stroke K7BV outside the contest with operating emphasis placed on the WARC, 6 and 2 meter bands. VHF WSJT meteor scatter scheduled contacts can be arranged. QSL via KU9C. (VHF Reflector)

**

DX

In DX, word that five German operators are from Tobago active as 9Y4 slash their home calls through the 14th of February. Look for them around 14.277, 21.377 and 28.377 Mhz. (GB2RS)

And F6AIG is currently on the air from Mayotte. Look for him around 17.00 UTC on about 14.130 Mhz. (GB2RS)

Lastly, DL2GAC is again active as H44MS from Honiara in the Solomon Islands. He plans to stay there a while and is active on 80 through 10 meters on SSB. For all of these operations, please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: BROADBAND OVER POWERLINES - AUSTRALIA SHOULD WAIT AND SEE

And finally this week, the pitfalls of broadband over powerlines technology have been highlighted down-under by a group calling itself The Spectrum Issues Group Australia or S-I-G-A. This, in a letter published in the Sydney Morning Herald and The Age news papers. Q-News Graham Kemp, VK4BB has the details.

--

While BPL holds out the promise of always-on internet availability from every household power point, overseas experience with this new technology shows Australia should not rush into adopting it.

BPL/PLC systems installed here would cause significant interference to high frequency communications users across Australia which include emergency services, aircraft, police, rural and remote services, maritime, government agencies and private users such as we Radio Amateurs.

Roger Harrison, VK2ZRH, speaking for the group says they are an informal alliance of organisations and individuals across Australia with interests in RF communications and technologies. Alliance members come from broadcasting, community service bodies, consultancies, emergency services, equipment manufacturers and suppliers, government, industry bodies, the radio amateur community and other radiocommunications users.

Graham Kemp, VK4BB.

--

The S-I-G-A letter makes fascinating reading no matter where you are in the world. It can be viewed on line at the Fairfax f2 website. That U-R-L is in this weeks printed Amateur Radio Nerwsline report.

Where should I start? I'm fifteen, and I would like to build or buy a transmitter/reciever, does anyone have any suggestions? It would help

if it were moderatly cheap...I don't have a lot of money. Are there
any good computer programs for helping to teach morse code?
Thanks!
Alex

When I first got my license in 1997 I went to Radio Shack and bought the study guide for tech no code. and I got Gordon West's Morse Code tapes. I aced the written but choked on the code. LOL In 2000 I studied the Code tapes again and passed it. I really liked the audio tapes.

I also started out with Radio Shack's HTX-202. It was a good 5W radio to start with right up until it died. I used it for over four years.

Oh BTW. If you really want to use the computer to study I think the best Testing software our there is Tony Lacy's Nu-test. you can get it at www.nu-ware.com you get the tech test free. but if you want the general or the extra you have to buy the program and I think it is well worth it. it helped me get my general rating.

I just bougth a new Icom 706mkIIG that has a possible problem. First off, I
am not real familiar with this type of radio yet, so it could be something
that is set incorrectly.
I am getting reports that there is a minor hum in the background during
transmit. (I have only operated on 2 meters to this point). I have only
used it both in the mobile or as a base on a battery with the charger
disconnected--this is not an AC hum. I get the same reports.

My questions are: Did I set it up wrong, if so, your experience in this
area would be appreciated. Should I seek out the nearest warranty station?

Thank you in advance.

Alex -- very good on your quest for an amateur radio license -- great hobby.
Good Luck

For how to get started see URL:
http://www.arrl.org/hamradio.html

and also an excellent tutorial written by a youth
http://www.hamquick.com/faq.php

First radio for beginners is usually a 2M Handi Talkie -- used from $35 up
at swap meets etc.
But if you get a tech+ or higher license -- then an older HF rig like a
Kenwood TS-520 can be had for around $300 or so.
And you can build CW kits for around $100 or less -- see URL:
http://ac6v.com/kits.htm

Lots of Morse code programs at URL:
http://ac6v.com/morseprograms.htm
Pick one that works for you. I like super Morse but try several

A page on learning Morse at URL:
http://ac6v.com/morseaids.htm#Learn

A typical morse test at http://ac6v.com/morseaids.htm#CWPASS

Are you transmitting with a tone? If you see "FM-T" in the display, then
you are.

Dang...You beat me to it...Thats the first thing I would look at. It's
normal to hear a hum if the tone is on. How well the other person
hears it will depend on how well their speakers reproduce low tones.
If you have big speakers with good low end, the tone will stick out
more than through a small tinny speaker. If it still did it, I would
try to borrow another 706 stock mike as a test. "Might be a shield

problem or something" If it still did it, I would probably get it checked out being it's in warranty. One thing, it *could* be possible the PL tone level could be a bit overly hot. "It's adjustable, or should be" Being it's in warranty, I would let the factory worry about that. I'm not sure if it's adjustable through the service menu or not. I'd have to look in the manual. It's probably pretty close though, being it's new. Normally, it shouldn't be overly noticable. If you keep getting repeated reports about it, I would probably look into it. If some people notice it, but others don't I probably wouldn't worry about it. Might be "big speaker" syndrome on the listeners end.   MK

I agree with KG6TDX that would be the first thing to check. I have a
IC-706MKIIG and love it, it did take a few days to get use to. I
would get me a power supply.   Iam running a little 25 amp MFJ Mighty
lite, I dont remeber the price but it wasnt much. OH a little secret
most of these if you run the mic gain around a 3 they tend to sound
the best on VHF/UHF, I know that sounds low but thats where i run
mine and about everybody i know run theirs. Just dont give up you
will learn to love it.

Bob, Mark, Bruce,

I think you guys hit the nail on the head; yes, I was using it with tone (FM-T) 123hz on a repeater.

I tried running simplex tonight with a neighbor 2 miles away. He reported perfect tone with no hum whatsoever. He is running an older 706. If mine sounds as good as his, I'm happy.

Thanks for you insights!

Do you remember stuff like "The Mary Whitehouse Experience" or "Lee and Herrings Fist of Fun?" Or "On The Hour"?

If you did, you might like "Futility Writ Big".

FWB is an Amateur British series, produced by fans of this kind of show. It is topical, crude, filthy, irreverant humour, produced monthly and broadcast on Live 365.

WHAT KIND OF MATERIAL IS IT?

This months epsiode, which first went out on Wednesday, 4th February, is called "The Illusion of Liberty" and there is a lot of material on the Hutton Report, the death of Doctor Harold Shipman, and many other things. The new episode goes out every night at 9pm GMT, 9pm Pacific Time, 8pm Eastern Time and there is also a broadcast 9pm Sydney Time. There have been a total of 9 episodes so far, and we are into our second series.

We are getting steady ratings, but I have never before tried to publicise the show before - the people that have found it have done so by accident.

To listen, go to www.live365.com and become a member. (It's free, and there are lots of great stations hosted on the site). Once you are logged on, search by station name for a station called futility_radio, press the play button and away you go!

We have had a couple of supportive emails, but I would love to get some more feedback from listeners. So, please listen to the show (episodes start at the top of the hour and last for about 30 mins) and even more importantly, please give me some feedback. Leave a message here, or email me on:

mailto: feedback@futilitywritbig.co.uk

Also, we have a (very slow, sorry) website at:
http://www.futilitywritbig.co.uk in which there is a link which you can reach me on.

Episodes so far:

Series One:

1) The Beginning of the End (February 2003)
In which we catch up on world events since 911, the Tellytubbies join the global coalition against terror, and a cure is found for anthrax... in Tinky Winky.
2) The March of War (March 2003)
About the War in Iraq. The French learn to overuse the word "Vito" and a suicidal soldier realises the only way to ensure he dies is to dress up as a British Troop and stand in front of some Americans...
3) The Consequences of Denial (April 2003)
SARS threatens to destroy the world and we finally see THAT episode of who wants to be a milllionnaire. One of the presenters dies of Sars live on air, and the remaining presenter arranges some female company for himself (and discovers that it is better with no teeth).
4) The Carcass of Britain (May 2003)
England starts to fall apart. A woman is left to die in her crushed car in an accident because she cannot find her credit card to pay the emergency services, and we discover that the pinnacle of British TV is Big Brother 4...
5) A Bunch of Twats (June 2003)
The police let a "comedy terrorist" into Prince Williams 21st birthday party, and we take a leaf from the government and sex up some literature, including "The Lord of the Rings" (which was a book first, you know).
6) The Death of Truth (July 2003)
Doctor David Kelly kills himself (we reveal why) and we enjoy National Foreplay day and National Orgasm day in way that you only can on radio...

Series Two:

1) Bombs and Buggery (November 2003)
In which a famous pop star is accused of some naughty things, and the WI discover that they have got the contract to dismantle the "death ships" from the US Navy...
2) The Might of the Land of the Free (December 2003)
Saddam Hussein is captured (Benny Hill style) and we learn of the new marketing category: Mextrosexual Man...
3) The Illusion of Liberty (January 2003)
We find out just how free we are when MI5 storm the studio in the wake of the Hutton Report and we are transformed into "The Lovely Show..."

Finally, for anyone who had read this far, we are hoping to involve more people in this show - whether we have additional writers, or people recording dialogue for us... if you think you have something to offer, bloody well get in touch. Or else.

Hello,

The main problem is LIVE 365! It requires users to lower security settings
and accept stuff they don't want.

Put it on a proper webstream that i can listen to through Media Player or
Winamp and I will have a listen.

Ian,

The reason I put the show on Live365 is because I know more about writing and editing than I do about things like streaming. If you could tell me where I could get more info, or how I can stream the show I would gladly have ago.

Many thanks...

"Ian" <krb@lycos.co.uk> wrote in message

In all fairness I did say I knew "more about writing and editing" rather than "I'm good at writing and editing!"

Does this mean you've listened?

<< It is also 110vac as opposed to European current at 220vac and the plug
will be different. >>

Heh...this one is good! The 706 can be opened up (visit www.mods.dk) on the
Xmit/RC and the unit runs on ~12VDC, NOT 110/220AC. Heh..

A

Before I start this circuit, could you guys suggest me any references
to look maybe, about some high freq. rf design tricks, etc

Thanks,
Adam

Alex,

You are getting a lot of good info on morse and a first rig. I might add, you may want to find a local club or individual in your area that may be able to help out as well. Do a Google search with your city (and maybe some neighboring cities) and "amateur radio club". Find a way to get to a meeting and make friends with some of the members. Another way is to look around your neighborhood for amatuer antennas. I knock on the door (with a parent by your side) can get the ball rolling. I was about your age when I was first licensed. My "Elmer" was my friends dad. He helped us both get our tickets.

Good Luck,

Tom - AC9TS

Name here is Sean

I have a Yaesu FT-2400H mobile that I bought today in Richmond, VA at the 2004 Frostfest.

The radio works and transmits but I do not have any mic audio.

Where is there a pot that adjusts the mic gain so that I don't have to yell into the mic to be heard?

Thanks :)

Sean, KD4ADV

Hi Sean, before I would mess inside the radio I'd check the mic. Most of the
time the element goes bad. Sometimes when they go bad they have no audio,
sometimes you need to yell into it to be heard. Also there might be a bit of
corrosion between the mic plug and mic jack causing a lousy connection.
These mics sometimes get dropped a lot.   Also, if it was
in the mobile a lot between the hot summers and cold winters temperatures this
can mess up a mic also. I have seen this over the last 20 years of being a
ham.   I'd try to wire up another mic or try to borrow one that fits the radio
as a test.
If you got it at a hamfest did you get the sellers calls and his phone number?
Many folks get rid of a radio because of a problem that they know about without
telling the buyer. That really stinks. Many hamfests have a guy there that
tests equipment before they buy.
On the other hand many hams are honest also.
Anyway, just try a different mic. You might be surprised at the easy fix.

73 and good luck

I would start with the mic first, rather than the radio. Are the contacts on the mic plug clean? (if not, an eraser will work). Are the pins in the socket bent down far enough to make contact with the plug when it's inserted?

Is the hole for the mic element plugged with something?

If there is another ham in the area with an 8-pin modular Yaesu mic, see if
you can try it.

CARS/N7PIR Will offer an operational check of Ham, and other Radio
Transmitters at the Puyallup WA Ham Fest on Saturday March 6th.

It's a perfect opportunity to check out that bargain radio before you
purchase at the Ham Fest, some other location, or your current radio.

Transmitter and Receiver will be tested as listed below.

PL Tone Deviation
DTMF Deviation
Transmitter Audio Frequency Response
Transmitter Output Frequency Deviation
Transmitter Power Output Level(s)
Receiver Input Sensitivity
Receiver Frequencies will be checked
A Printout of measured values will be provided.

Look for our tables on the first floor.

Thank you.

Louis Bybee
Cascade Armature Radio Society--

Try Radio Shack
They have them in Canada

http://www.radioshack.ca/estore/Product.aspx?language=en-CA&product=2018104&category=Portables+%26+Multiband&catalog=RadioShack

Only $599.00 CAN that about $400 US I think

I did hook up a cb mic and my audio was heard.
Thanks :)
I may contact a dealer in Virginia called HRO in Woodbridge,VA and see if
they have one that can be sold.
I am going to hook up a spare mic until that time.

Sean, Kd4Adv

Hello NG

Have anyone make a Power supply for the
Yaesu VL-1000 Amplifire ???

Bec. the VP-1000 is expensive

So maybe anyone have a idea for
a homemade solution

Sirc Hans

State of Florida Scanner Law

Florida Statutes (1995)
Title 46, CRIMES
Ch. 843, OBSTRUCTING JUSTICE
&#167; 843.16

843.16 Unlawful to install radio equipment using assigned frequency of state or law enforcement officers; definitions; exceptions; penalties

(1) No person, firm, or corporation shall install in any motor vehicle or business establishment, except an emergency vehicle or crime watch vehicle as herein defined or a place established by munincipal, county, state, or federal authority for governmental purposes, any frequency modulation radio receiving equipment so adjusted or tuned as to receive messages or signals on frequencies assigned by the Federal Communications Commission to police or law enforcement officers of any city or county of the state or to the state or any of its agencies. Provided, nothing herein shall be construed

to affect any radio station licensed by the Federal Communications Commission or to affect any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to Part II of Chapter 489, Operating a Central Monitoring System.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement officer or employee of any city, any county, the state, the Federal Bureau of Investigation, or the Armed Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of the state or any state fire department vehicle;

3. Any motor vehicle designated as an emergency vehicle by the Department of Highway Safety and Motor Vehicles when said vehicle is to be assigned the use of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle by the sheriff of any county in the state when said vehicle is to be assigned the use of frequencies assigned to the said county;

5. Any motor vehicle designated as an emergency vehicle by the chief of police of any city in the state when said vehicle is to be assigned the use of frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person participating in a citizen crime watch or neighborhood watch program when such program and use are approved in writing by the appropriate sheriff or chief of police where the vehicle will be used and the vehicle is assigned the use of frequencies assigned to the county or city. Such approval shall be renewed annually.

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to Part II of Chapter 489, Operating a Central Monitoring System.

(4) Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor of the second degree, punishable as provided in s. 775.082 or s. 775.083.

Florida Highway Patrol Dispatch Centers

Location	Dispatch Channel (s)	Counties Covered
Arcadia	Ch-2	Desoto, Glades, Hardee, Hendry, Highlands

Tallahassee	Ch-3	Leon, Franklin, Gadsen, Liberty, Wakulla
Tampa	Ch-1	Pinellas

Tampa Ch-2 Hillsborough
Venice Ch-2 Charlotte, Sarasota

Ch-1 154.665
Ch-2 154.680
Ch-3 154.695
Ch-4 154.920 Emergency/Car-Car/Aircraft
154.905 Some mobiles, and handhelds
154.935 Some mobiles and handhelds
155.370 Intercity (not used at all comm centers)
156.180 Turnpike mobile repeaters (most likely no longer in use)
465.1625 Mobile repeaters (non-800 Mhz areas)

Notes:
When possible, the channel used for specific counties is noted.

The Turnpike Communications Center in Orlando has closed and was consolidated into a new center in Lake Worth.

This list does not include remote transmitter sites. In some areas a mobile unit may use the name of the closest tower site to their location. i.e. "700 Cross City". This assists the dispatcher in selecting the correct tower.

Most communication centers that have switched to 800 Mhz have removed their old base channels and should be retaining use of Ch-4. VHF mobiles are to be removed later.

Amateur Radio Newsline™ Report 1384 February 20, 2004

Amateur Radio Newsline report number 1384 with a release date of Friday, February 20, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Reaction begins to the FCC on B-P-L, Hamvention will probably remain in Dayton and restructuring continues around the world. These stories and more coming your way on Amateur Radio Newsline report number 1384, right now.

THE BPL FIGHT: ARRL REACTS TO FCC NPRM

The ARRL and many others in ham radio are not happy with last weeks FCC decision to proceed with further implementation of Broadband Over Powerline, and they are making their position known. Amateur Radio Newsline's Mark Abramovich, NT3V, has been following developments and has more in this report:

--

To say American Radio Relay League President Jim Haynie W5JBP was disappointed with the FCC's decision to issue a Notice of Proposed Rulemaking on Broadband Over Powerlines might be an understatement.

Haynie sat in on the FCC's Feb. 12 meeting in Washington, D.C. and admits he was dumbfounded when many of the commissioners expressed excitement about the possibilities of BPL, ignoring interference concerns expressed by their technical staff.

"To have Commissioner (Kathleen) Abernathy come out in her initial speech that blew us away and her unbounded enthusiasm and then turn around at the hearing I attended and listen to Commissioner (Jonathan) Adelstein allude to unsubstantiated reports of interference and I was livid," Haynie says.

Haynie says the commissioners look more like cheerleaders for, than regulators of, the communications industry.

"It just seems to me though that the commission has gone from a regulatory agency to a Chamber of Commerce," Haynie says. "Their eagerness to implement this prior to the NTIA study rollout, which they actually have a letter from a congressman asking them to wait, seemed to me it was put on the fast track and try to beat the NTIA results."

Haynie says lots of what he heard about what's supposed to be in the NPRM does not bode well for amateur radio. But he says there are some burdens on the electric utilities.

"They put a lot of constraints on the BPL industry," Haynie explains. "They have to react in real time, they have to be frequency agile. They have to have public web sites, they've got to have somebody on duty 24-7 to mitigate complaints of interference."

Ah, yes, interference. BPL proponents claim hams don't know what they're talking about.

"I've heard reports of some of the BPL industry spokesman who flat deny that there's a problem," Haynie says. "There never has been a problem, there can't be a problem. "In several interviews I've done with the regular press it was: 'Okay, go down a buy you a short-wave receiver at Radio Shack. Go down there and listen to it for yourself. I don't have to give you all these engineering data, you can hear it for yourself.'

"The utilities, they are being hand-held very carefully by the BPL industry and being told: "There's not a problem, there's not a problem.' "

Haynie says profit for the equipment manufacturers and the utilities is clearly the motive for BPL.

"Any CEO worth his salt who's running a power company is going to try to figure out more ways to get investment return for his investors," Haynie says. "He's got a grid there and if these salesmen come in and tell him: 'Well look, you know, we can bring you in an extra million dollars a day or million dollars a week for your power grid and it's not going to cost you anything other than just put these little devices on every quarter mile.' Why not?"

But Haynie says a recent Carnegie Mellon University study of the BPL business model identifies pitfalls.

"It would take 17 years for the recovery of the initial investment," Haynie says. "And that puzzled me until I read the article and it said because broadband is dropping, DSL dial-up is getting cheaper every month.

"Deals are coming out, Verizon's fixin' to come out with some more stuff. The old thing $30 a month is going to be high. And that's what BPL wants right now, $30 for a residential, $50 for a business."

Haynie accuses proponents of deception proponents in "selling" the concept. He says the claim it will finally connect rural areas of the country to high-speed internet access is, well, hogwash!

"We know that what the BPL industry wants to do is pick the low-hanging fruit, the high-density population areas," Haynie says. "But that's the selling point they're using on the (Capitol) Hill. And that's the selling point they use with the commission. I heard Chairman (Michael) Powell say that himself along with several of the other commissioners.

"They have been sold this bill of goods. And if anybody would stop and think about it, if it was such a good deal to serve five customers in a four-square-mile area, the DSL and the cable people would be doing it now."

Haynie says he's seen and heard criticism of ARRL, much of it declaring the League hasn't done enough to address the BPL threat.

"Let me assure you, we have done a lot, and we have talked to a lot of our potential allies," Haynie says."We've had one, in-face meeting in Washington. We do constant e-mails back and forth.

"But I am not going to, and the League is not going to, reveal all the things we're working on because that would be ridiculous to show the hand to the industry. Let them figure out what we're up to."

What can you do and where do Haynie and the League see this going? Tune in next week for part two of our interview with Jim Haynie W5JBP.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

Can radio services including ham radio survive with the level of interference that many experts say BPL will create? We will look into this in future reports. (ARNewsline (tm))

**

WITH THE ARRL: THREE LONGTIME AWARDS DISCONTINUED

Meantime, the ARRL Awards Branch has discontinued three longtime awards programs. Gone are the Rag Chewer's Club, the Old Timer's Club and the Friendship Awards.

According to the ARRL Letter, the society’s Membership Services Manager Wayne Mills, N7NG, says that the number of amateurs applying for awards in general has declined significantly over the years, and interest in these three awards had slowed to a trickle.

Mills says that the awards programs eliminated had outlived their interest level. He adds that the cessation of the three awards is effective immediately. (ARRL)

**

RESTRUCTURING: NEW RULES FOR DANISH HAMS

More restructuring of ham radio is taking place around the world. This, as a set of new Amateur Radio regulations have been introduced in Denmark that make the nation code-free. Jeramy Boot, G4NJH, reports:

--

The Danish Information Technology and Telecom Agency has announced new regulations for radio amateurs in Denmark. The main feature of the new regulations is the elimination of the Morse code examination for access to the HF bands. Danish radio amateurs are also now allowed to use parts of the 4-meter band without a special permit. These are: 70.0125 to 70.0625, 70.0875 to 70.1125, 70.3125 to 70.3875 and 70.4125 to 70.4875MHz. Beacons are allowed in the 70.0125 to 70.0500MHz portion of the band. Detailed Danish 70MHz band plans can be found on the Internet.

I’m G4NJH in Nottingham.
--

The new regulations came into effect on the 1st of February. (GB2RS)

**

RESTRUCTURING: CROATIAN HAMS GET NEW PRIVILEGES ON 40 METERS

Croatia has become the first country in Region 1 to benefit from the expansion of the 40-meter band agreed at the World Radio Conference in Switzerland last summer. 9 A prefix amateurs have also been given privileges at 70 and 3400MHz and now no longer have to pass a Morse code test for access to the HF bands.

New amateur radio regulations came into effect in Croatia on the 26th of December but have only recently been announced to the world. Since that date Croatian amateurs have been permitted to operate between 7100 and 7200 kilohertz on a Secondary basis, with a maximum power of 1000 watts P-E-P. This is in addition to the normal Region 1 allocation of 7000 to 7100 kilohertz.

On 4 meters, Croatian amateurs now have 70.000 to 70.450 MHz, with a power limit of 10 watts. They also gain a new band between 3400 and 3410 MHz, with a maximum permitted power of 150 watts.

And like so many other nations, the Morse code requirement for an H-F band access license has been dropped. Under the new regulations and there are now only two classes in Croatia. They are the full license and a beginners' ticket. (GB2RS)

CONVENTIONS: HAMVENTION HOPES TO STAY IN DAYTON

Hamvention will probably stay in the Dayton Ohio area. This, according to the event's General Chairman Gary Des Combes, N8EMO. In an interview with the Rain Report, Des Combes says that Dayton is the Hamvention's home:

--

Des Combes: "My personal goal, and the goal of all of the volunteers is to maintain the show in Dayton Ohio. This is where it started and we would love to have it stay here. The plan we have no is to continue to go in that direction."

--

How do planners intend to do this?

--

Des Combes: "What we need to do as a volunteer team is to work smarter, harder and more efficiently. Make the dollar 'squeal' so that the cost to the attendee and the flea-marketer and the exhibitors stay reasonable."

--

What about the rumors of a move away from Dayton?

--

Des Combes: "There have been questions, quite frankly, from the exhibitors and others about wanting to move to newer and nicer facilities, but there are significant costs associated with that, and its our goal to keep this show a volunteer show because -- quite frankly -- we can do it better and more economically than if we went to a larger venue."

--

Keeping the show in Dayton is only a small part of what Gary De Combes has to say about Hamvention 2004.   Part one of the Rain interview with De Combes is on-line right now at www.rainreport.com and on the phone at 847-827-7246. Part 2 will be available on Friday, February 27th.

Hamvention 2004 takes place May 14, 15 and 16th at its traditional home at the Hara Arena in Dayton Ohio. (ARNewsline (tm), RAIN)

**

ENFORCEMENT: EX-KG6IRO DUE BACK TO COURT

I’m Bill Pasternak, WA6ITF, with a late breaking story. Dateline Los Angeles California where former ham Jack Gerritsen, the ex-KG6IRO is headed back to court. This time for a probation hearing and sentenceing on charges that he tresspassed on a federal instalation. Bur local hams haqve gotten themselves involved in the sentencing proceedure and are trying to convince Judge Carolyn Turchin of United States District Court to ban Gerritsen from owening or operarating any transmitting equipment -- of any sort -- during his probation period.

This action appears to be a grass-roots effort by repeater owner operators all across Southern California who believe that Gerritsen is responsible for interference to their systems. They are asking all of their users and other hams in the area to send a letter to Judge Turchin explaining the importance of quashing any source of interference that could cause problems during emergencies. They also want to let the judge know all about Gerritsen’s past record and have her order him to stay away from ham radio or any other two-way service as a restriction of his probation.

Judge Turchin has set Monday, February 23rd for the hearing. Will let you know the outcome in next weeks Amateur Radio Newsline report. (ARNewsline(tm))

**

RADIO EDUCATION: TEXAS HAM DONATES STATION TO SCHOOL

The San Angelo Texas Planning Commission has approved a 40 foot Amateur Radio tower for Santa Rita Elementary School. San Angelo businessman, Kenneth Gunther, W5ZJ, plans to donate the tower, a rotor, antenna's and radio equipment to the educational institution. The radio gear and antenna system will allow students to learn about telecommunications technology and earn their ham radio licenses.

W5ZJ, is the owner of Gunter Wholesale Electric Company. His donated tower will be erected inside the courtyard of the elementary school's main building. Plans for the 40 foot tower passed 6-1 after a motion to allow a 50 foot tower failed 4-3. (San Angelo Standard Times, WB5T)

RADIO GOOD-GUYS: COLORADO YOUTH RADIOS IN REPORT OF FOUND POLICE TWO-WAY

A Highlands Ranch, Colorado, teen appears to have done the right thing when he found a Denver police radio on Monday the 16th. Not sure what the unit was, he used it to let the police force know he had it.

The 13-year-old boy found the radio in the yard of a nearby home. This, after he saw it thrown from a sport utility vehicle.   The unidentified youngster retrieved it, figured out how to turn it on and used the radio to tell a police dispatcher that he had it.

Denver police and Douglas County sheriff's officials were working to retrieve the radio. Officials say that they hadn't been notified that a radio was missing, and investigators were trying to determine who it belonged to. They are also looking into how this radio got out of the City and County of Denver.

The complete story is on-line at rockymountainnews.com/drmn/local/article/0,1299,DRMN_15_2660662,00.html (Rocky Mountain News, CGC)

ROAD RADIO SAFETY: STUDY FINDS LOTS OF IN-CAR DISTRACTIONS

Drivers are distracted 16.1 percent of the time their vehicles were moving and cellphones nor two-way radio is not the main culprit. This, according to a study conducted by the auto club and researchers at the University of North Carolina.

The investigation tracked 70 drivers from North Carolina and Pennsylvania. It found that Cellular telephones were not the major distraction. In fact only 30 percent of the subjects used a cell phone while their vehicle was moving compared with 97 percent who leaned over to reach for something and 91 percent who fiddled with the controls on their car’s entertainment system.

The study found all drivers fiddle with their radios or engage in other distracting behavior. This, even when they're being watched as part of a study on distracted drivers. (Science OnLine)

**

HAM RADIO BUSINESS: NEW FROM CREATIVE SERVICES SOFTWARE

Turning to ham radio business, Creative Services Software has announced that version 3.0 of Pacterm for Windows and P K term for Windows will be released later this year. Version 3.0 not only includes new sound card modes, but also an integrated logging program to keep track of QSO’s, DXCC and even do light contesting. It will also support exporting to ADIF for use with the ARRL Logbook of the World and to other logging programs, provide radio and rotor control, and be able to sync with Packet Clusters that are connected by the Packet window. More information on Creative Services Software products can be found at www.cssincorp.com (CSS via VHF Reflector)

**

THE ELECTRONICS INDUSTRY: CES PREDICTS GOOD SALES IN 2004

The Consumer Electronics Association -- better known by the initials CES -- says that the wholesale electronics market in 2004 is likely to grow to 100 point 99 billion dollars in sales. That’s up 5 percent over 2003 and a major improvement over three years of negative or minimal growth.

CES is a trade group representing audio, video and mobile electronics makers. It says that the U.S. consumer electronics market is seeing a sharp growth in video products, which has helped to offset the decline in stand-alone audio products and in-car consumer electronics. Sales of new technologies such as plasma television screens were expected to generate nearly $1.5 billion in revenues for 2003, nearly tripling from $515 million just one year earlier. Growth in consumer electronics last peaked in 2000, when sales rose 12.7 percent to $96.37 billion over 1999. (Adapted from CES release)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: LELAND SMITH, W5KL OF QCWA - S.K.

Some sad news to report QCWA President Emeritus Leland Smith, W5KL, has become a Silent Key. According to QCWA webmaster Bob Roske, N0UF, Smith passed away in his sleep the evening of February 15th.

In addition to being President Emeritus of QCWA, Smith served as Chairman of the organizations Scholarship Committee, was President of The Old-Old Timers Club and a member of The Society Of Wireless Pioneers. (QCWA)

**

CHANGING OF THE GUARD: RSGB PAST PRES. GEOFF STONE, G3FZL - S.K.

And word that Radio Society of Great Britain past president Geoff Stone, G3FZL, has also become a Silent Key. This following a long illness.

Stone served as the Society's President in 1964. The RSGB described him as a loyal servant of the Society, serving on Council and numerous boards including the VHF Committee. His funeral took place at on Wednesday, February 11th in South London. (RSGB)

**

HAM RADIO IN SPACE: AMSAT SAYS IT NEEDS $110,000 TO LAUNCH ECHO

AMSAT says that it urgently needs to raise $110,000 to help defray the launch of the Echo ham radio satellite. The bird is scheduled to ride into orbit thus coming June 29th, and the money has to be raided well before that date.

AMSAT like Amateur Radio Newsline is a federally recognized tax exempt

501(c)(3) organization, and your donation should be tax deductible in the United States. Information on how to support the Echo launch and other ham radio in space projects is on the web at www.amsat.org (AMSAT-NA)

**

HAM RADIO IN SPACE: U-O-SAT AT AGE 20

Meantime, there’s a big anniversary coming up for ham radio space operations. March 1st marks the 20th anniversary of the UO11 ham radio satellite on-orbit. We have more in this report:

--

On the 1st March the UO-11 ham radio satellite, which is also known as UOSAT 2 will have been in space for two decades. To mark the event, AMSAT-UK will be issuing a commemorative QSL card in exchange for listener reports from stations hearing the signals during the month of March. The reports must be made by way of the reporting page on the web site and the QSL card will be in the form of a downloadable "E-QSL".

By way of background, UO-11 was the second satellite to be launched by Martin Sweeting, G3YJO's, group at the University of Surrey in here in England. Its telemetry beacon can still be heard on 145.825 MHz FM using nothing more than a handheld 2 meter rig. There is also a 2401.5 MHz beacon but signal is not very strong and represents quite a challenge.

Depending on the status of the satellite, it sometimes goes into 'safe' mode, and the beacon transmitters are not activate for days at a time. Because of this, University of Surrey ground station controllers will attempt to maximise the number of days the transmitters are active during the month of March.

For the Amateur Radio Newsline, Rick Johnson, KA9VZD reporting.

--

An article and pictures about U O11 and the rules for filing reports are available on the AMSAT-UK website. Its in cyberspace at www.uk.amsat.org (AMSAT-UK)

**

RADIO IN SPACE: RADIO TELESCOPES DISCOVER NEW GALAXY

Using radio telescopes on Earth and another optical scope in space, a team of astrophysicists says it's detected a tiny galaxy that is the farthest known object from Earth. California Institute of Technology astronomer Richard Ellis says the galaxy is roughly 13 billion light-years from Earth. According to Science On Line, an expert at the Harvard-Smithsonian Center for Astrophysics in Massachusetts says the discovery gives a rare glimpse of the time when the first stars and galaxies began to emerge. (Science OnLine)

**

INTERNATIONAL - ISRAEL: A REPEATER FOR ALBANIA

Hagal International reports that the Israel Amateur Radio Club has donated a 2 meter repeater to Albania’s amateur radio society. Hopefully, by the time you read this it will be up and running in Tirana, which is Albania’s capital city. (Hagal International)

**

CONTEST CALENDAR: THE DIGITAL SKIRMISH

Turning to the contest calendar, "The Skirmish" - that’s the Troy Amateur Radio Association’s digital prefix contest, will be held on April 17. Categories include PSK31, PSK63, MFSK, RTTY, Packet, ASCII, SSTV and others with activity on 160 through 6 meters excluding the Warc bands. You can find additional information at www.n2ty.org/seasons/tara_seasons.html   (Via E-Mail)

**

CONTEST CALENDAR: N3FTI FROM TURKS & CAICOS FOR ARRL DX CONTEST

Steve Kerns, N3FTI, says he will be on the island of Providenciales, Grid Square FL31 in the Turks & Caicos chain for this years ARRL World Wide DX Contest. During the contest, his group consisting of WE3C, KQ3V and himself will be active as VQ5A.   This is the first time to Steve’s knowledge this prefix has been activated from the Turks and Caicos and the first time this prefix has been used by any station. During non-contest times listen for Steve operating as VP5 stroke N3FTI.

This contest runs for 48 hours from zero hours UTC on Saturday the 21st of February on all the contest bands between 160 and 10 meters. For more information the VQ5A operation, check www.qsl.net/n3fti on the world-wide-web (VHF Reflector)

**

DX

In D-X, word that LZ1ZF is celebrating his 35th anniversary of being on the amateur radio bands with the special callsign L35ZF. He is active on all bands and modes. until the 31st of December.

Also, SM0CCM will be active as J73CCM from Dominica through the 4th of March. He will operate on 160 to 6 meters mostly CW, with some RTTY and PSK 31. QSL as directed on the air.

And word that JA2EZD will be traveling in Vietnam and Cambodia through the end of the month. He plans to operate using the calls 3W2B and XU7AAA. Again, QSL as directed on the air.

And QSL Manager José of Jesus Moura Costa, PS8ET tells Amateur Radio Newsline that he has relocated. His new address is Q-25 C-17 Parque Piauí   Teresina, PI. 64.025-100 Brazil South América

Lastly, 4X4SIX is an Israeli 6 meter beacon operating on 50.080 MHz. The team of 4X6ON and 4Z5AY built the 5 watt station which announces its call sign around the clock in Morse using a J-Pole antenna.

(Above from various DX sources)

**

THAT FINAL ITEM: THE LONG HAM RADIO WALK

And finally this week, the story of a long walk that’s taking ham radio with it. Jim Meachen, ZL2BHF reports:

--

Tony Whitaker, G3RKL, from Sheffield, in the United Kingdom is off to New Zealand for a short walk. Well not exactly a short walk. More like 750 miles as Whitaker treks from Invercargill to Blenheim, along State Highway 6 up the West Coast of the South Island. And he will operate an Amateur Radio station along the way.

Whitaker will be on the air using the special callsign ZL6SHS on H-F, V-H-F and U-H-F while actually walking. He also plans to use F-M simplex, Echolink and I-R-L-P Internet-linked repeaters in places where they are available. He will use them to keep in touch with his ham radio friends back home in the U-K.

Whitaker’s marathon walk starts in Invercargill on the 21st of February. If all goes to plan he is scheduled to arrive in Blenheim on the 8th of April -- probably a bit tired -- but very satisfied. We will keep you posted on his progress.

For the Amateur Radio Newsline down-under, I’m Jim Meachen, ZL2BHF.

--

This is not Whitaker’s fist long ham radio walk. He has already made seven others including one in Australia. (GB2RS)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the newly created Roy Neal, K6DUE, Amateur Radio Mentoring

Project is up and operating. We already have signed up over two dozen hams who are willing to assist others. If you can help, or if you need assistance please drop a note with your name, address, hone number and area of expertise to mentor@arnewsline.org and we will get back to you as fast as we can.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Don Wilb anks, AE5DW, in New Orleans saying 73, Happy Mardi Gras and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

rec.radio.amateur.equipment:49473

Greetings all... de N8WIP

I am in the final process of writing an article on ARES/RACES and I need a few photographs to put with it. The article is writen to educate today's emergency services in what the amateur radio service is all about and how it can help them in the event of a disater or emergency. The article is titled: The Multi-Million Dollar Communications Network that you probably don't even know you have.

I am looking for photographs of mobile communications centers, portable communications systems, EOC's or any other photograph that shows what ARES/RACES and the amateur radio community is all about.

Credit will be given for photographs used so please be sure to include the photographers name and the name of any person or group within the photo. Please DO NOT send photographs that are not you own unless you have permission from the photographer.

Upon request, if your photograph is used in the printed issue I will make sure that you receive a copy.

Photographs should be at least 800x600 @ 200 DPI in .JPG format and should be emailed to: news@zoominternet.net

If you have any questions please feel free to email me:
news@zoominternet.net

Radios made for ham use only are a lot cheaper than any Motorola, and have special features for hams that probably are not there in the Motorola.

Get a 2 meter rig. Or one that combines 2 meters and 70 centimeters, if you have the money.

Have fun!

Bob

My wife and I are going on a driving vacation to Disneyland in March from the Phoenix, Arizona area. I would like to take along my dual-band radio to keep in touch especially if there is an emergency and there is no cell phone coverage. I was wondering if there was such a thing as a book or website that would basically show repeater coverage on a map. I have the ARRL Repeater Directory but that just has location names like "Silver Peak" which doesn't really help me. I also have the Repeater MapBook but that isn't much more help because it isn't any more precise on where repeaters are located or their coverage. I'd also like to ask the group for recommendations. We'll be travelling from Phoneix, Arizona to Anaheim, California via I-10. So if anyone here can recommend on-line resources for what I'm asking or a book, I would be greatly appreciative. Also, if you've made the trip yourself feel free to recommend repeaters to use along the way.

Thank you,
Jon Hanson (N7ZVJ)

Alex,

People have already posted many links to get you started. Another link about amateur radio and that has practice tests is www.qrz.com , but you'll have to deal with a bit of bickering that's been going on in the forums about the U.S. getting rid of the morse code requirement to get on HF.

Using the mast / stays of your sailboat as an antenna works well for HF but wouldn't be alot of good on local 2meter stuff. Of course unless you were docked or near shore 2meters wouldn't be much use anyway ;-)

If you need any help or just want to talk about radio.. drop me an email

Jon,

Take a look at ARRLs TravelPlus for Repeaters. It includes the entire ARRL Repeater Database. You can plot two point and it will list the repeaters along a route.

Jim,
   Thank you! That's exactly what I'm looking for. Unfortunately it's sold out until May. I guess I'll get it in time for our summer vacation.
   I knew that someone had to be able to derive that information if they

```
know the repeater's latitude and longitude (which you have to know in order
to submit the information to the repeater directory).
   Thanks again for the information.

Hi
I have the MFJ 989C, and I am noticing that I can tune antenna to low SWR
but I also have noticed that the SWR often was jumping or spiking and very
unusual. I thought it may be coax or antenna or a short but then I noticed
also that the inductance coil is very sensitive. If you touch it or tap it
this will cause the SWR to spike. Also when it spikes, if you put a little
pressure on the Inductance coil knob it will solve the problem. Anyone else
have situation such as this? What did you do to fix the problem? I opened it
up and cleaned the contacts where I thought the problem was but still didn't
correct the problem.
Any ideas ???

Dear Echolink users

I have disabled all my firewalls, do not have any routers but my Echolink still does not want to connect to even the Test server.

What I need to know from any Windows 2000 users whose Echolink is working, is what the settings for Services are on their computers. I think my problem is there.

The settings for services I am looking for can be found under
My Computer-->Manage-->Services and Application-->Services

I would appreciate it a lot is somebody can send me their settings that are working.

Best regards
Danie

```

Hello,

I'm quite new to amateur radio, so not sure if this would be over my head right now. But I'd like to extend the range of my handheld. I'd like to setup a mobile repeater of some sort kind of like this:

Either have my mobile at home, in my car, etc - so when I am nearby it - I can use it instead of relying on my portable to do the work:

Handheld TX --> Mobile TX --> Desired Repeater --> Handheld RX

Is this hard to accomplish? Any ideas or suggestions would be most appreciated!

Brand new to hobby, so much to learn but well worth the time.

Thanks!

-Trevor

Trevor, I do this frequently. It requires a dual band mobil that has what is called "cross band" capability. Lets assume you wish to work a 2m repeater, the dual band mobil's VHF section is programmed for that 2m repeater. The mobil UHF section is programmed to a simplex frequency, say 446.050. You the put the mobil into its cross band mode, and with you HT you Tx to the Mobil on 446.050, it cross bands and "repeats" your HT 446.050 transmission to the 2m repeater. When your mobil receives the signal from the 2m repeater it now "cross band(s)" and sends it to your HT on 446.050.

Hopes this helps.

Regards, Hugh KF6HHS

I had bought a complete Yaesu FT-900 setup over the last year with the =
hopes of setting up a station here again, but it just doesn't seem I'll =
have the time any time in the near future. So I'm going to list my stuff =
on EBAY soon, but thought I'd give anyone here interested first crack at =
it. I'd like to sell it as a complete set, but will listen to any =
reasonable offers. Here's what I have:

  1.. Hard to find Yaesu FT-900 with auto tuner and collins filter, mint =
condition (I have not used it, but it's gorgeous), includes standard =
handmike, DC power cord, and original manual and box.

  2.. Yaesu YSK-900 remote separation kit for FT-900 (previous owner =
said he bought but never used) as new in original box.

  3.. Heil HM-10 desk mike with HC-5 element, this could pass as brand =
new in original package, includes desk stand and cord for Yaesu.

  4.. BRAND NEW in package, "TiniCat" CAT control DIY kit for FT-900, =
comes with all parts and instructions on CD-Rom ($34.95 retail)  This =
allows computer control of the rig for many logging programs.
Everything is in beautiful shape and came from non-smoking environments. =
 Asking $900 as a complete package and I'll include shipping anywhere =
lower 48 US states at that price (will only ship continental US). I do =
have digital pictures of the whole setup for anyone interested. They can =
email me at n1ao@maine.rr.com  This would be a sweet rig for the mobile =
contester to take to those remote locations, or anyone to take mobile, =
or an awesome compact base rig. I waited a long time to find an FT-900 =
this clean and nice, but it's been sitting in the box since the day it =
arrived here over a year ago. This comes from a NON-smoking environment. =
All being sold as is since it's electronics, but know known problems to =
the best of my knowledge.

It'll probably all go on EBAY soon if I haven't heard from anyone. I =
will take only postal money order, bank check, or PAYPAL. I'll ship out =
within 2 business days or less of receipt of funds.

Not part of the above deal, but I also have a brand new mini-G5RV ($25 + =
ship) and full G5RV ($35 + ship) for sale as well as a Diamond X50 =
VHF/UHF base antenna in excellent shape ($60 + ship)  See info in the =
Diamond here: http://www.eham.net/reviews/detail/1054

Thanks!

Don Lockhart

```

Greetings,

I just bought a Uniden HR 2510 10 meter mobile off ebay. The radio
came with no internal speaker and has mods to open it up on the 11
meter band and has some crazy audio effects processor attached.

I hooked it up and briefly scanned the 10 meter band, using
headphones, and heard only static.

Is 10 meters dead now or should I suspect the radio?

I was using a mag-mount vertical on top of my van and got decent swr
so I believe the antenna should be ok.

The seller has agreed to install a new speaker and remove the stupid
audio effects add-on as well as replace the accessory port but I want
to make sure the radio is receiving fine before I consent.

Thanks,

Greg Bradburn

Greg -- Why not use Telnet Access to DX Packet Clusters -- Via NG3K Covers
USA and DX Connections
This will show 10M DX stations currently on the air --- URL:
http://www.cpcug.org/user/wfeidt/Misc/cluster.html

Use the command   SH/DX/21 10
put a space between the 21  and  the  10
This will yield  the last 21 DX spots on 10 Meters
Look for spots made from W4 land

Another way is to listen to the NCDXF Beacon system  -- URL:
```

http://www.ncdxf.org/Beacon/intro.html

Tune to 28.200 for Beacons transmitting in rotation from around the world
They ID in fast Morse -- but programs are available to assist copying

Also try a better antenna

73 and GD DX

--
Incognito By Necessity (:-(

If you can't convince them, confuse them.

I'm just asking.  Does Uniden make amateur type-accepted equipment?

Spam generator is more like it.

The folks at Commercial Network Services likely had the good fortune of transforming GateKeeper (a Cox Cable customer from San Diego) from a sub-standard employee to a former employee. Now he wants revenge by spamming the place.

Good show, Commercial Network Services.

Incognito ,

Thanks for the reply.

I was not aware of the DX Packet Clusters.

Unfortunately, I do not have telnet access from work (stupid firewall)
but I will try this from home.

Thanks again,

Greg.
